IMPORTANT NOTE

BEFORE APPLYING THIS UPDATE OF R:BASE TURBO V-8 FOR WINDOWS

(BUILD: 8.0.18.30909)

Due to a major structural enhancement related to speedy Indexes, all existing Turbo V-8 database(s) indexes (if defined), MUST be DROPPed and then re-CREATED.

Follow the suggested steps below before applying this update:

01. Start the previously updated version of R:BASE Turbo V-8 for Windows

At the R> Prompt: CONNECT dbname IDENTIFIED BY userid password
 SET NULL -0-
 OUTPUT dbname.ALL
 UNLOAD ALL
 OUTPUT SCREEN
 DISCONNECT
 RENAME dbname.RX? dbnameBackup.RX?
 EXIT

02. Now apply the latest update (Build: 8.0.18.30909) accordingly.

Start R:BASE Turbo V-8 for Windows

At the R> Prompt: DISCONNECT
 SET MESSAGES ON
 SET ERROR MESSAGES ON
 SET FEEDBACK ON
 RUN dbname.ALL
 SET FEEDBACK OFF

This will create a new database with freshly defined Indexes using the latest enhancement.

03. After following the suggested steps regarding your database and applying this update successfully, be sure that all workstations on the network are using the exact same version of R:BASE, including the correct version of RBG8.EXE, RBG8EE.EXE, and RBENGINE8.DLL.
04. You also **MUST** re-compile your R:Compiled executable, as well as distribute the correct RBENGINE8.DLL with the corrected and re-built database.
05. If your are also using **Oterro 8.0**, make sure that you contact support@rbase.com for your specific license update of Oterro 8.0.
