What's New in R:BASE 11 (Version 11.0)

UPDATE 3

Official Release Version

Build: 11.0.3.11120

Thursday, November 20, 2025

Requested Enhancements

09/06/2025 - 11/20/2025

Item	Date Implemented	Description
------	------------------	-------------

Release Build: 11.0.3.11120

- | | | |
|-----|------------|--|
| 01. | 11/12/2025 | Utilities - The Data Dictionary includes a new toggle button to control whether or not the utility uses the Windows clipboard to pass information between the Data Dictionary and destination control (original behavior). The new behavior transfers the captured data directly, not via the clipboard. |
| 02. | 10/13/2025 | Settings - A new RESET setting has been implemented which controls whether or not RESET commands are added to output from UNLOAD commands. The default is ON.

SET RESET ON/OFF |
| 03. | 10/08/2025 | Settings - A new QUOTEBLANKS setting has been implemented which controls whether R:BASE will add quotes to blank strings derived from variables, which occurs when using a dotted/ampersand variable and the NULL setting is all blanks. The quotes added to the blank string is the current QUOTES character. The default is ON.

SET QUOTEBLANKS ON/OFF |
| 04. | 10/06/2025 | Forms - The Tile Menu control was updated with the added "On Home Click" EEP to execute when focus is directed to the main page. |
| 05. | 09/17/2025 | Commands - The in-memory table limit has been increased from 25 to 1000. |
| 06. | 09/11/2025 | Views - In-memory views has been implemented, where the temporary view is stored in memory, not temporary files.

CREATE INMEMORY VIEW CustomerContact +
(CustID,Company,ContID,ContFName,ContLName,+
ContPhone,ContEMail,LastContactDate) AS +
SELECT T1.CustID,T1.Company,T2.ContID,T2.ContFName,T2.ContLName,+
T2.ContPhone,T2.ContEMail,T2.LastContactDate +
FROM Customer T1,Contact T2 +
WHERE T1.CustID = T2.CustID |

07. 09/08/2025 Form Designer - The Tab Order settings has been enhanced to select an object on the form canvas with [Ctrl+MouseHover] even while the modal Tab Order Settings dialog is displayed. The feature allows for the selected form object to be highlighted in the Tab Order dialog for easier recognition of the control, especially on forms with many objects. Note that the feature only works on the list of objects in the lower child controls list view. If the control being hovered is not in the child controls list view, then the auto-selection will not take place.

Item	Date Fixed	Description
<i>Release Build: 11.0.3.11120</i>		
01.	11/17/2025	Forms - The filtering performance in DB Grid and Enhanced DB Grid controls has decreased in the recent September 05 update.
02.	11/14/2025	Database Explorer - When an underscore is defined within an object's name (table, form, report, etc.), the underscore is listed at the end of an alphabetically sorted list. This sort differs to how operating systems sort the underscore in folders, and also how areas of R:BASE sort objects. For example, in the Import/Export dialog, the table names with an underscore in the name are listed before letters.
03.	11/14/2025	File Gateway - When the [Alt] is pressed during the number of rows processed import dialog, the import process incorrectly stops.
04.	11/12/2025	Utilities - When displaying all details (Name, Table Name, Comment, Date/Time) in the Data Dictionary, include the missing Version column. Also, the Table Name caption should read "Table/View Name" as both may be assigned.
05.	11/07/2025	Commands - When table structure is unloaded, the comments and rules are written as ANSI while the rest of the table definition is UTF8, resulting in an incorrect mixed content.
06.	11/05/2025	Reports/Labels - When printing a report to a PDF file from the Print Preview screen, expected data at the bottom of the first page is not included.
07.	11/04/2025	Forms - When using a DB Tree List control and selecting a node via EEP code, the data change event is not triggered.
08.	10/31/2025	Forms - When displaying a list view who's dynamic WHERE clause includes an ampersand variable, the list view content is not populated. The ampersand variable for the WHERE clause can be NULL or contain a value.
09.	10/28/2025	File Gateway - When importing a fixed format text file, not all of the expected rows are loaded into the table. The file being imported has 52,225 lines of records. However, when the import is completed, there are only 40,707 rows in the table. The initial "Preparing records ..." status in the "number of rows loaded" dialog is where the incrementing import value stops at 40,707 rows.
10.	10/28/2025	File Gateway - If a duplicate import is performed, while selecting to clear the existing records on the final screen, the subsequent import is much slower than the initial import.
11.	10/28/2025	File Gateway - When reviewing the break line wizard screen for a fixed format import, the file display of character coordinates resets incorrectly when the mouse button is clicked, held down, and released within the horizontal scroll bar.
12.	10/28/2025	File Gateway - The "Importing..." dialog with the rows Added/Processed is incorrectly on top of all opened windows for the operating system. The dialog should be specific to R:BASE.
13.	10/27/2025	File Gateway - When loading a specification file for a fixed width format text file, the assigned starting and ending break lines for the desired data sections are not retained in the break line wizard screen. The GUI appears with lines, however the locations are incorrect.
14.	10/27/2025	Forms - When using the PROPERTY command to alter the background color of a DB Grid control, the color is not updated as expected.

- | | | |
|-----|------------|--|
| 15. | 10/24/2025 | Report/Label Designer - When adding/removing items within a report band, the "Number of Objects: #" caption on the band is not automatically updated. The band must be physically moved with the mouse, or the designer must be closed and reopened in order for the "Number of Objects: #" caption to appear as expected. |
| 16. | 10/24/2025 | Data Designer - When clicking to save table changes, if you click on the designer background the "Save Changes" dialog is incorrectly placed behind the R:BASE window. This causes confusion as the Save confirmation dialog will also be behind the main R:BASE window. |
| 17. | 10/24/2025 | File Gateway - When importing a XLSX spreadsheet file into a table a "file limit" message appears. The file does import into the table as expected using version X.5. |
| 18. | 10/23/2025 | Settings - Steps may be repeated where the configuration file may be wiped out of all settings/content. |
| 19. | 10/23/2025 | Settings - The Configuration Settings dialog can incorrectly display TMP as the SCRATCH setting when the setting is not defined as such. |
| 20. | 10/22/2025 | Report/Label Designer - After a text variable expression is modified with added static text, the variable on the report does not reflect the change after saving and previewing the report. |
| 21. | 10/21/2025 | Form Designer - When using the green arrow buttons to move a selected item up or down the list, if a button is clicked many times and the item moves up/down beyond the visible scope, the arrow button can keep being pushed, but you do not know where the current item is located in the order. Please ensure the selected item stays visible when moving up and down the list. |
| 22. | 10/21/2025 | Report/Label Designer - When static text labels are defined as bold, and then the bold style is removed, the report preview still displays the text as bold. |
| 23. | 10/20/2025 | File Gateway - When loading a file for an import and after the R:BASE background is clicked, the import progress dialog is now behind the R:BASE window. The behavior can be confusing as the user does not know that the import is still taking place, especially when switching to another program and back to R:BASE. The import dialog should remain on top of the R:BASE window when running. |
| 24. | 10/20/2025 | External Form Designer - When selecting "Form > Save Form As" from the menu bar or the "Save Form As" button, the file name field is blank. Please update the file name field to provide the "existing" external form file name, to easily define a new file name that is similar to the existing file name, without having to type out the file name. |
| 25. | 10/16/2025 | WHERE Builder - The "Add Column" button, or the action of double clicking on a column name in the "Select Columns" list, incorrectly overwrites the value in the Windows clipboard. |
| 26. | 10/16/2025 | Form Designer - When using the Form Designer menus and property editors, the clipboard content may be incorrectly overwritten when using the Data Dictionary to capture information. |
| 27. | 10/15/2025 | Forms - When using Variable Edit fields with dynamic WHERE clauses, the expected results are not displayed in pop-up menus. |
| 28. | 10/13/2025 | Forms - The drag-and-drop functionality for use in list view controls does not behave as expected. |
| 29. | 10/09/2025 | Report/Label Designer - The "Edit > Code" menu option in the Form Designer provides search options when the "Code" tab is viewed and no EEP has been opened in the Editor. Even though code may be searched in reports/labels, the "Edit > Code" menu option is missing. |
| 30. | 10/08/2025 | ODBC - When SATTACHing a table with column names as reserved words when ANSI is set OFF, the table is attached but cannot be opened in the Data Browser. |
| 31. | 10/07/2025 | File Gateway - When a new table import takes place and R:BASE recognizes that there are data type differences between the existing columns and the new columns and a new column name is automatically generated, an 18-character limit is incorrectly assigned to the new column name length. |

- | | | |
|-----|------------|---|
| 32. | 10/07/2025 | Forms - When a Tile Menu is used to display the Detail control, the title gets updated with the Detail's caption. But, if the prior title is shorter than the new one, the new title is drawn in the rectangle occupied by the previous title (which is not as wide). |
| 33. | 10/06/2025 | Forms - When launching a form with a Web Browser control using MS Edge as the browser engine on a new Windows 11 operating system, the Web Browser does not display the content as expected.

A newer WebView2Loader.dll file is included with product updates and installers. |
| 34. | 10/06/2025 | Label Designer - When the designer is open and the database is disconnected, the "Close the Report Designer first" message is displayed. The message should read "Close the Label Designer first" if that specific module is open. |
| 35. | 10/02/2025 | Data Types - The internal handling of VARBIT variables has been corrected. |
| 36. | 10/02/2025 | Database Explorer - When copying a report, the "Reset Version Number" option is not checked by default, which differs from when copying a form. |
| 37. | 10/02/2025 | Report Designer - Reports with many rich text controls may fail to open in the designer. |
| 38. | 10/01/2025 | Print Preview - When printing a report to the screen which has over 10,000 pages, the page count value is truncated. |
| 39. | 10/01/2025 | Form Designer - When tabbing from field to field for DB Edit objects which are located on the form background layer, the Static Text, Panels, and several of the Form Designer toolbars blink/refresh each time the [Tab] key is pressed. |
| 40. | 10/01/2025 | Form Designer - When using the Tab Order Settings dialog on a form with many controls, the focus upon objects in the lower list view would automatically change if there were objects "behind" the Tab Order dialog. |
| 41. | 09/22/2025 | Forms - The DB Tree Grid control does not correctly utilize the R:BASE session's regional settings. |
| 42. | 09/22/2025 | File Gateway - When multiple specification files (.rgw) reside in the same folder, where the file copies were made by using a copy/paste of the file in Windows Explorer, the .rgw files incorrectly display in the File Gateway with the same exact name.

The file list was updated to display the .rgw file name and the specification name. |
| 43. | 09/22/2025 | Data Designer - When reviewing rules and sliding the Message/Where column separator to the left to see large WHERE definitions, the column incorrectly resets back to the prior location when switching to another R:BASE tab (R> Prompt, Editor, etc.) and back to the Data Designer. |
| 44. | 09/22/2025 | Forms - When using dynamic tiles within the Tile Menu control, the tile generation does not correctly process the carat "^" line break character. |
| 45. | 09/18/2025 | Database Explorer - Exceptions can occur when creating, deleting, and recreating a database using a command file at the R> Prompt. |
| 46. | 09/18/2025 | Data Browser - A minimized state can be incorrectly persisted after reopening the Data Browser, which appears as though R:BASE is not responding, when in fact it is showing a modal form that is minimized. |
| 47. | 09/18/2025 | Data Browser - The modal Data Browser minimize behavior has been updated, where instead of minimizing the modal form, the entire application is minimized instead. |
| 48. | 09/17/2025 | Commands - When unloading a table with a column which is defined with a default value containing an apostrophe, the UNLOAD output does not allow for the table to be recreated. |
| 49. | 09/17/2025 | Reports/Labels - Rich text content can appear incorrectly within Mail Merge-enabled Rich Text controls. |

- | | | |
|-----|------------|--|
| 50. | 09/12/2025 | Report/Label Designer - The Grid Option check box settings are not saved when checked or unchecked within a session, and are always checked when the designer is started. |
| 51. | 09/12/2025 | Form Designer - The "View > Snap to Grid" and "View > Show Grid" menu bar settings are not saved when toggled off within a session, and are always checked when the designer is started. |
| 52. | 09/09/2025 | Reports/Labels - When a DB Barcode object defined with the Auto Size and Auto Font Size properties checked using Code 128, the barcode does not expand as expected. |
| 53. | 09/08/2025 | Commands - When processing a dotted VARCHAR variable in a WHILE loop, the variable value is incorrect. |
| 54. | 09/08/2025 | Forms - The Enhanced DB Grid drop-down filter logic has been updated where the drop-down items are now updated to contain only valid values relative to the existing filters. |
