Standard Controls

Standard Controls

Static Text

ALIGN

- CLIENT** Client: The control resizes to fill the client area of its parent. If another control already occupies part of the client area, the control resizes to fit within the remaining client area.
- LEFT** Left: The control moves to the left side of its parent and resizes to fill the height of its parent. The width of the control is not affected.
- NONE** None: The control remains where it was placed. This is the default value.
- BOTTOM** Bottom: The control moves to the bottom of its parent and resizes to fill the width of its parent. The height of the control is not affected.
- TOP** Top: The control moves to the top of its parent and resizes to fill the width of its parent. The height of the control is not affected.
- RIGHT** Right: The control moves to the right side of its parent and resizes to fill the height of its parent. The width of the control is not affected.

ALIGNMENT

- RIGHT** Text is right-justified: Lines all end at the right edge of the control.
- LEFT** Text is left-justified: Lines all begin at the left edge of the control.
- CENTER** Text is centered in the control.

ANGLE

- nnn** Use this property to specify the angle used to rotate the label.

AUTOSIZE

- TRUE** Use AutoSize to make the label adjust its size automatically so the client area accommodates the height and width of the text. When AutoSize is False, the label is fixed in size. When AutoSize is True, the size of the label readjusts whenever the text changes. The size of the label is also readjusts when the Font property changes.

When WordWrap is True, the width of the label is fixed. If AutoSize is also True, changes to the text cause the label to change in height. When AutoSize is True and WordWrap is False, the font determines the height of the label, and changes to the text cause the label to change in width.
- FALSE** Use AutoSize to make the label adjust its size automatically so the client area accommodates the height and width of the text. When AutoSize is False, the label is fixed in size. When AutoSize is True, the size of the label readjusts whenever the text changes. The size of the label is also readjusts when the Font property changes.

When WordWrap is True, the width of the label is fixed. If AutoSize is also True, changes to the text cause the label to change in height. When AutoSize is True and WordWrap is False, the font determines the height of the label, and changes to the text cause the label to change in width.

Control	Property	Value

Standard Controls
Static Text

BEVELWIDTH

nnn Use BevelWidth to specify how wide the inner or outer bevel should be. Do not confuse BevelWidth, which is the width of the bevels, with BorderWidth, which is the space between the bevels.

If both the BevelInner and BevelOuter properties are bvNone, BevelWidth has no effect. To remove both bevels, set the BevelInner and BevelOuter properties to None, rather than setting the BevelWidth to 0, as this involves less overhead when painting.

BLINKCOLOR

Value This property determines the color the Caption of the component is drawn in when Blink State is on.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

BLINKING

TRUE When this property is True, the Caption of the component will periodically be drawn using the BlinkColor value to give the appearance that the component is blinking. When Blinking is False, the Caption appears only in the color specified in Font.Color.

FALSE When this property is True, the Caption of the component will periodically be drawn using the BlinkColor value to give the appearance that the component is blinking. When Blinking is False, the Caption appears only in the color specified in Font.Color.

BLINKINTERVALOFF

nnn This property controls how long (in milliseconds) a blinking caption stays in the Off BlinkState

BLINKINTERVALON

nnn This property controls how long (in milliseconds) a blinking caption stays in the On BlinkState

Standard Controls

Static Text

BORDERCOLOR

Value

Use this property to specify the color used to fill the region between the inner and outer borders.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

BORDERHIGHLIGHT

Value

Use this property to specify the color used when painting highlighted portions of the border.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

Standard Controls

Static Text

BORDERSHADOW

Value	Use this property to specify the color used when painting shadowed portions of the border.
	Available Values:
	AQUA
	BLACK
	BLUE
	CREAM
	DARK GRAY
	FUCHSIA
	GRAY
	GREEN
	LIME
	LIGHT GRAY
	MAROON
	MEDIUM GRAY
	MINT GREEN
	NAVY
	OLIVE
	PURPLE
	RED
	SILVER
	SKY BLUE
	TEAL
	WHITE
	YELLOW

BORDERWIDTH

nnn	Specifies the distance, in pixels, between the outer and inner bevels.
-----	--

CAPTION

CAPTION	Specifies the text string that the Label displays.
	Use Caption to specify the text that the Label displays. To underline a character in a Caption, include the ampersand (&) before the character. This type of character is called an accelerator character.

Control	Property	Value
---------	----------	-------

Standard Controls

Static Text

COLOR

Value Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

ENABLED

TRUE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FALSE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

Standard Controls

Static Text

FLATCOLOR

Value Use this property to specify the color to use in drawing borders set to the Flat style.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

FLYBYCOLOR

Value Use this property to specify the color the label should change to when the mouse is positioned over the label. This property is only used when the FlyByEnabled property is True.

Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

SHADOWCOLOR

Value Use this property to specify the shadow color used in the 3D text styles.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

SHADOWDEPTH

nnn Use this property to specify how far down and to the right the shadow text will be displayed from the main text. This property is only applicable when Text Style is set to Shadow.

SHOWACCELCHAR

TRUE Determines how an ampersand in the label text is displayed.

Set ShowAccelChar to True to allow the label to display an underlined accelerator key value. When ShowAccelChar is True, any character preceded by an ampersand (&) appears underlined. If the FocusControl property is set, the windowed control specified by the FocusControl property receives input focus when the user types that underlined character. To display an ampersand when ShowAccelChar is True, use two ampersands (&&) to stand for the single ampersand that is displayed.

Set ShowAccelChar to False to display the label text with all ampersands appearing as ampersands. When ShowAccelChar is False, the value of the FocusControl property is not used.

FALSE Determines how an ampersand in the label text is displayed.

Set ShowAccelChar to True to allow the label to display an underlined accelerator key value. When ShowAccelChar is True, any character preceded by an ampersand (&) appears underlined. If the FocusControl property is set, the windowed control specified by the FocusControl property receives input focus when the user types that underlined character. To display an ampersand when ShowAccelChar is True, use two ampersands (&&) to stand for the single ampersand that is displayed.

Set ShowAccelChar to False to display the label text with all ampersands appearing as ampersands. When ShowAccelChar is False, the value of the FocusControl property is not used.

SHOWHINT	<div><div>TRUE</div><div>Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.</div></div> <div><div></div><div>The Help Hint is the value of the Hint property, which is displayed in a box just beneath the control. Use ShowHint to determine whether a Help Hint appears for the control.</div></div> <div><div>FALSE</div><div>Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.</div></div> <div><div></div><div>The Help Hint is the value of the Hint property, which is displayed in a box just beneath the control. Use ShowHint to determine whether a Help Hint appears for the control.</div></div>
TOP	<div><div>nnn</div><div>Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.</div></div>
TRANSPARENT	<div><div>TRUE</div><div>Specifies whether controls that sit below the label on a form can be seen through the label.</div></div> <div><div>FALSE</div><div>Specifies whether controls that sit below the label on a form can be seen through the label.</div></div>
VISIBLE	<div><div>TRUE</div><div>Determines whether the component appears on screen.</div></div> <div><div>FALSE</div><div>Determines whether the component appears on screen.</div></div>
WIDTH	<div><div>nnn</div><div>Specifies the horizontal size of the control or form in pixels.</div></div>
WORDWRAP	<div><div>TRUE</div><div>Specifies whether the label text wraps when it is too long for the width of the label.</div></div> <div><div>FALSE</div><div>Specifies whether the label text wraps when it is too long for the width of the label.</div></div>

Control	Property	Value
---------	----------	-------

Standard Controls
Static Text

FONT_COLOR

value Specifies the font color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

LAYOUT

CENTER Specifies how the text of the label is placed within the client rectangle of the label control.

TOP Specifies how the text of the label is placed within the client rectangle of the label control.

BOTTOM Specifies how the text of the label is placed within the client rectangle of the label control.

CONDENSECAPTION

Value Specifies how the contents of the text is displayed in situations where the text is too long for the display area.

Options:

- . None
- . AtEnd
- . WithinPath

When set to AtEnd, if the Caption does not fit within the control's bounds, the end of the string is replaced with an ellipsis (...). When set to WithinPath, the Caption is condensed so that the start and end of the path string is displayed within the bounds of the control.

USEASLINK

TRUE Specifies whether the text control is used as a link to launch a file.

FALSE Specifies whether the text control is used as a link to launch a file.

USEASLINKKEEP

TRUE Specifies whether the text control is used as a link to launch an EEP.

FALSE Specifies whether the text control is used as a link to launch an EEP.

Control	Property	Value
---------	----------	-------

Standard Controls

Push Button

ALIGNMENT

- LEFT

Text is left-justified: Lines all begin at the left edge of the control.
- CENTER

Text is centered in the control.
- RIGHT

Text is right-justified: Lines all end at the right edge of the control.

CAPTION

- CAPTION

Specifies the caption that appears on the button.

Use Caption to specify the text string that appears on the button.

To underline a character in a Caption that appears on the button, include an ampersand (&) before the character. This type of character is called an accelerator character. The user can then select the button by pressing Alt while typing the underlined character. To display an ampersand character in the caption, use two ampersands (&&).

COLOR

- Value

Specifies the background color of the control.

Available Values:

AQUA

BLACK

BLUE

CREAM

DARK GRAY

FUCHSIA

GRAY

GREEN

LIME

LIGHT GRAY

MAROON

MEDIUM GRAY

MINT GREEN

NAVY

OLIVE

PURPLE

RED

SILVER

SKY BLUE

TEAL

WHITE

YELLOW

DEFAULT

- TRUE

If Default is True, the button's On Click event executes when the user presses Enter.
- FALSE

If Default is True, the button's OnClick event executes when the user presses Enter.

MAKECLICK

Specifies to fire the "On Click" EEP for the button, simulating a mouse click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY NewButton MAKECLICK ' '

FLATFACE

- TRUE

Sets the gradient appearance of the button to visible/hidden. The default is False/unchecked. The property takes effect when Native Appearance is False/unchecked and Hot Track is True/checked.
- FALSE

Sets the gradient appearance of the button to visible/hidden. The default is False/unchecked. The property takes effect when Native Appearance is False/unchecked and Hot Track is True/checked.

SHOWFACESHADOW

- TRUE

Sets visibility of the shadow at the bottom part of the button. The default is True/checked. The property takes effect when Native Appearance is False/unchecked and Hot Track is True/checked.
- FALSE

Sets visibility of the shadow at the bottom part of the button. The default is True/checked. The property takes effect when Native Appearance is False/unchecked and Hot Track is True/checked.

Standard Controls

Enhanced Panel

HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
TRANSPARENT	TRUE	Specifies whether controls that sit below the label on a form can be seen through the control.
	FALSE	Specifies whether controls that sit below the label on a form can be seen through the control.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
SHOWGRID	TRUE	Determines whether grid lines are displayed on the panel.
	FALSE	Determines whether grid lines are displayed on the panel.
GRIDCOLOR	Value	Specifies the color of the grid, when Show Grid" is enabled.
GRIDSTYLE	Value	Specifies the style in which the grid lines are drawn. Options: . Dots . DottedLines . Lines

Control	Property	Value
---------	----------	-------

Standard Controls

Enhanced Group Box

ALIGN

- NONE

Determines how the control aligns within its container (parent control).
- TOP

Determines how the control aligns within its container (parent control).
- BOTTOM

Determines how the control aligns within its container (parent control).
- LEFT

Determines how the control aligns within its container (parent control).
- RIGHT

Determines how the control aligns within its container (parent control).
- CLIENT

Determines how the control aligns within its container (parent control).

ALIGNMENT

- LEFT

Text is left-justified: Lines all begin at the left edge of the control.
- CENTER

Text is centered in the control.
- RIGHT

Text is right-justified: Lines all end at the right edge of the control.

BEVELWIDTH

- nnn

Use BevelWidth to specify how wide the inner or outer bevel should be. Do not confuse BevelWidth, which is the width of the bevels, with BorderWidth, which is the space between the bevels.
- If both the BevelInner and BevelOuter properties are None, BevelWidth has no effect. To remove both bevels, set the BevelInner and BevelOuter properties to bvNone, rather than setting the BevelWidth to 0, as this involves less overhead when painting.

BORDERCOLOR

- Value

Use this property to specify the color used to fill the region between the inner and outer borders.
- Available Values:
- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

BORDERWIDTH

- nnn

Specifies the distance, in pixels, between the outer and inner bevels.

DISABLEDBLCLICK	TRUE	Specifies if the ability to double click on the control is disabled.
	FALSE	Specifies if the ability to double click on the control is disabled.
CUEBANNER	Value	Specifies a text hint to appear in the field, which disappears when the focus lands on the field.
CUEBANNERFOCUSED	TRUE	Specifies if the hint remains until keystrokes are pressed (Windows Vista, 7, and higher only).
	FALSE	Specifies if the hint remains until keystrokes are pressed (Windows Vista, 7, and higher only).
BALLOONTIPTITLE	Value	Specifies the tip title. The maximum length for the balloon tip title is 99 characters.
	Example: <pre>PROPERTY PEdit_PO ShowBalloonTip TRUE PROPERTY PEdit_PO BalloonTipTitle 'Attention' PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.' PROPERTY PEdit_PO BalloonTipIcon bttlInfo</pre>	

Database Controls

DB Edit

SHOWBALLOONTIP

- TRUE

Specifies if the balloon tip is displayed.

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
PROPERTY PEdit_PO BalloonTipIcon bttlInfo
```
- FALSE

Specifies if the balloon tip is displayed.

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
PROPERTY PEdit_PO BalloonTipIcon bttlInfo
```

BALLOONTIPTEXT

- Value

Specifies the tip text.

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
PROPERTY PEdit_PO BalloonTipIcon bttlInfo
```

BALLOONTIPICON

Info_Large A large "info" icon is displayed in the balloon tip (Windows Vista, 7, and higher only).

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
PROPERTY PEdit_PO BalloonTipIcon Info
```

Info An "info" icon is displayed in the balloon tip.

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
PROPERTY PEdit_PO BalloonTipIcon Info
```

Warning A "warning" icon is displayed in the balloon tip.

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
PROPERTY PEdit_PO BalloonTipIcon Info
```

Error An "error" icon is displayed in the balloon tip.

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
PROPERTY PEdit_PO BalloonTipIcon Info
```

None No icon is displayed in the balloon tip.

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
PROPERTY PEdit_PO BalloonTipIcon Info
```

Warning_Large A large "warning" icon is displayed in the balloon tip (Windows Vista, 7, and higher only).

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
PROPERTY PEdit_PO BalloonTipIcon Info
```

Error_Large A large "error" icon is displayed in the balloon tip (Windows Vista, 7, and higher only).

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
```

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>DB Edit</div>		
BALLOONTIPICON		PROPERTY PEdit_PO BalloonTipIcon Info
EDITMASK	Value	Specifies the format mask for the control.
FORCEREFRESHVALUE	TRUE	In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed).
		PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'
DISPLAYFORMAT	Value	Specifies the display format for the control.
		Examples: PROPERTY CI_LastUpdate DISPLAYFORMAT 'dddd, mmmm dd, yyyy' PROPERTY CI_UpdateTime DISPLAYFORMAT 'h:nn:ss AM/PM' PROPERTY CI_TotalAmount DISPLAYFORMAT '#,0.00;-#,0.00' PROPERTY CI_FinalCalib DISPLAYFORMAT '#.#,E+00'
MAXLINEWIDTH	nnn	Specifies the limited width of the pop-up menu.
		Example: PROPERTY CompID MaxLineWidth 250
PMSINGLECLICK	TRUE	Specifies if only a single click is accepted to choose an item.
	FALSE	Specifies if only a single click is accepted to choose an item.
REQUIREVALUEONFORMCLOSE	TRUE	Specifies the control is checked if it has a value in the form's "On Close" event.
	FALSE	Specifies the control is checked if it has a value in the form's "On Close" event.
VALUEISREQUIREDMESSAGE	Text	Specifies the displayed message if REQUIREVALUEONEXIT or REQUIREVALUEONFORMCLOSE is True, and a value is not entered/specified for the control.
PMSKIP	TRUE	Specifies if the focus is automatically shifted to the next object in the tab order when the pop-up menu is closed.
	FALSE	Specifies if the focus is automatically shifted to the next object in the tab order when the pop-up menu is closed.
PMTABLE	Value	Specifies the table/view the menu values will be retrieved from.
PMCOLUMN	Value	Specifies the column returned for the pop-up menu selection.
PMSELECT	Value	Specifies the column(s) and/or expression for the table/view data source.

Control	Property	Value
---------	----------	-------

Database Controls

DB Edit

PMWHERE	Value	Specifies the WHERE Clause, to limit the menu values for the pop-up menu.
PMLINES	nn	Specifies the number of values displayed in the pop-up menu list.
PMCAPTION	Value	Specifies the caption value which the pop-up menu will display when visible.
PMTITLE	Value	Specifies the title value which the pop-up menu will display when visible.
MAKERIGHTCLICK		<p>Specifies to fire the "On Right Click" EEP for the control, simulating a mouse right click. The last parameter will accept any value for the PROPERTY command.</p> <p>Syntax:</p> <p>PROPERTY CustomerList MAKERIGHTCLICK ' '</p>
MAKEDBLCLICK		<p>Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.</p> <p>Syntax:</p> <p>PROPERTY CustomerName MAKEDBLCLICK ' '</p>

Control	Property	Value
---------	----------	-------

Database Controls

DB Memo

ALIGN

- NONE

Determines how the control aligns within its container (parent control).
- TOP

Determines how the control aligns within its container (parent control).
- BOTTOM

Determines how the control aligns within its container (parent control).
- LEFT

Determines how the control aligns within its container (parent control).
- RIGHT

Determines how the control aligns within its container (parent control).
- CLIENT

Determines how the control aligns within its container (parent control).

ALIGNMENT

- LEFT

Text is left-justified: Lines all begin at the left edge of the control.
- CENTER

Text is centered in the control.
- RIGHT

Text is right-justified: Lines all end at the right edge of the control.

BEVELWIDTH

- nnn

Use BevelWidth to specify how wide the inner or outer bevel should be.

COLOR

- Value

Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

Form Controls and Properties		Database Controls
Control	Property	Value
Database Controls		
DB Memo		
ENABLED	TRUE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
	FALSE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
FRAMEVISIBLE	TRUE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
	FALSE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HIDESELECTION	TRUE	Determines whether the visual indication of the selected text remains when focus shifts to another control.
	FALSE	Determines whether the visual indication of the selected text remains when focus shifts to another control.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
MAXLENGTH	nnn	Specifies the maximum number of characters the user can enter into the edit control.
READONLY	TRUE	Determines whether the user can change the text of the edit control.
	FALSE	Determines whether the user can change the text of the edit control.
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.

Control	Property	Value
---------	----------	-------

Database Controls

DB Memo

TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WANTRETURNS	TRUE	Determines whether the user can insert return characters into the text.
	FALSE	Determines whether the user can insert return characters into the text.
WANTTABS	TRUE	Determines whether the user can insert tab characters into the text.
	FALSE	Determines whether the user can insert tab characters into the text.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
WORDWRAP	TRUE	Determines whether the edit control inserts soft carriage returns so text wraps at the right margin.
	FALSE	Determines whether the edit control inserts soft carriage returns so text wraps at the right margin.
SHOW_EDITOR	TRUE	Will bring up the Note/BLOB Field Viewer/Editor with [NOTE/VARCHAR] tab as default.
TEXTVALUE	value	To allow the programmer direct access to the TEXT property underlying the DB Memo control.

Database Controls

DB Memo

FOCUSCOLOR

Value Specifies the background color of the control when focused.

Supported Background Colors:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW
- BUTTON FACE
- SCROLLBAR
- BACKGROUND
- ACTIVE CAPTION
- INACTIVE CAPTION
- MENU
- WINDOW
- WINDOWFRAME
- MENU TEXT
- WINDOW TEXT
- CAPTION TEXT
- ACTIVE BORDER
- INACTIVE BORDER
- APP WORKSPACE
- HIGHLIGHT
- HIGHLIGHT TEXT
- BUTTON SHADOW
- GRAY TEXT
- BUTTON TEXT
- INACTIVE CAPTION TEXT
- BUTTON HIGHLIGHT
- 3D DARK SHADOW
- 3D LIGHT
- INFO TEXT
- INFO BACK
- GRADIENT ACTIVE CAPTION
- GRADIENT INACTIVE CAPTION

HIGHLIGHTFOCUS

TRUE Specifies that the background color can be changed when the focus enters the control.

FALSE Specifies that the background color can be changed when the focus enters the control.

Control	Property	Value
---------	----------	-------

Database Controls

DB Memo

FIRSTCHAR	TRUE	Specifies whether the cursor will appear in the component starting position.
	FALSE	Specifies whether the cursor will appear in the component starting position.
LASTCHAR	TRUE	Specifies whether the cursor will appear in the component ending position.
	FALSE	Specifies whether the cursor will appear in the component ending position.
DISABLEDOUBLECLICK	TRUE	Toggles the ability to launch the Note/BLOB Field Viewer/Editor when using the mouse to double click.
	FALSE	Toggles the ability to launch the Note/BLOB Field Viewer/Editor when using the mouse to double click.
READONLYCOLOR	Value	Specifies the background color of the control when set to "read only".
READONLYCOLORONFOCUS	TRUE	Enables the "Read-Only" Color if the cursor focus is on the control.
	FALSE	Enables the "Read-Only" Color if the cursor focus is on the control.
PREVENTCOPY	TRUE	Specifies whether text can be copied from the field.
	FALSE	Specifies whether text can be copied from the field.
PREVENTCUT	TRUE	Specifies whether text can be cut from the field.
	FALSE	Specifies whether text can be cut from the field.
PREVENTPASTE	FALSE	Specifies whether text can be pasted into the field.
	TRUE	Specifies whether text can be pasted into the field.
AUTOSELECT	TRUE	Determines whether all the text in the edit control is automatically selected, when the control gets focus through the Tab Order.
	FALSE	Determines whether all the text in the edit control is automatically selected, when the control gets focus through the Tab Order.
DISABLEDBLCLICK	TRUE	Specifies if the ability to double click on the control is disabled.
	FALSE	Specifies if the ability to double click on the control is disabled.
FORCEREFRESHVALUE	TRUE	In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed).
	PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'

Integrating local data with web sites that do not have an API. Automating web page tasks within R:BASE. Extracting data from web pages

Control	Property	Value
---------	----------	-------

Database Controls

DB Web Browser

_VALUE

Value Specifies the value of the HTML control.

```
PROPERTY WebBrowser1 "_VALUE|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_VALUE|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_INNER_HTML

Value Specifies the HTML between the start and end tags of the object. For the object "<p>Text here...</p>", the INNER_HTML is "Text here..."

```
PROPERTY WebBrowser1 "_INNER_HTML|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_INNER_HTML|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

Control	Property	Value
---------	----------	-------

Database Controls

DB Web Browser

_INNER_TEXT

Value Specifies the text between the start and end tags of the object stripping all the tags. For the object "<p>Text here...</p>", the INNER_TEXT is "Text here..."

```
PROPERTY WebBrowser1 "_INNER_TEXT|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_INNER_TEXT|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_OUTER_HTML

Value Specifies the object and its content in HTML. For the object "<p>Text here...</p>", the OUTER_HTML is "<p>Text here...</p>"

```
PROPERTY WebBrowser1 "_OUTER_HTML|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_OUTER_HTML|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

Database Controls

DB Web Browser

_OUTER_TEXT

Value Specifies the text of the object. For the object "<p>Text here...</p>", the OUTER_HTML is "Text here... "

```
PROPERTY WebBrowser1 "_OUTER_TEXT|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_OUTER_TEXT|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_ID_LIST

Value Captures a CSV string of element IDs.

```
Get all IDs:  
GETPROPERTY WebBrowser1 "_ID_LIST" "vIDList"  
  
Get IDs of all anchors:  
GETPROPERTY WebBrowser1 "_ID_LIST|TAG A" "vIDList"  
  
Get IDs of all dropdowns:  
GETPROPERTY WebBrowser1 "_ID_LIST|TAG SELECT" "vIDList"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_NAME_LIST

Value

Captures a CSV string of element Names.

Get all Names:
GETPROPERTY WebBrowser1 "_NAME_LIST" "vNameList"

Get Names of all anchors:
GETPROPERTY WebBrowser1 "_NAME_LIST|TAG A" "vNameList"

Get Names of all dropdowns:
GETPROPERTY WebBrowser1 "_NAME_LIST|TAG SELECT" "vNameList"

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_CUSTOM_LIST

Value

Captures a CSV string of element details. Key columns are TAG, ID, NAME, VALUE. At least one of the four columns should be specified. Additional columns can be added; INNER_HTML, INNER_TEXT, OUTER_HTML, OUTER_TEXT, <TagAttribute>. The order of the four required columns is fixed. The optional columns are ordered based on the order in the field list.

GETPROPERTY WebBrowser1 "_CUSTOM_LIST|FIELDS ID,VALUE" "vIDValuePairs"
GETPROPERTY WebBrowser1 "_CUSTOM_LIST|FIELDS ID,SRC|TAG IMG" "vImageList"

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.

- SKY BLUE
- TEAL
- WHITE
- YELLOW

ENABLED

TRUE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FALSE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

HEIGHT

nnn Use the Height property to read or change the height of the control.

HINT

HINT Contains the text string that can appear when the user moves the mouse over the control.

LEFT

nnn Specifies the horizontal coordinate of the left edge of a component relative to its parent.

Control	Property	Value
---------	----------	-------

Database Controls

WORDWRAP

- TRUE

Specifies whether the label text wraps when it is too long for the width of the label.
- FALSE

Specifies whether the label text wraps when it is too long for the width of the label.

SUPPRESSPOPUPERRORMESSAGE

- TRUE

Use this property to suppress the -ERROR- message when the WHERE clause does not meet the criteria to display Pop-up Menu defined for DB Edits.

Example

-- To suppress the error message for un-qualified lookup
PROPERTY <DBEditCompID> SuppressPopupErrorMessage 'TRUE'
RETURN
- FALSE

Use this property to display the -ERROR- message when the WHERE clause does not meet the criteria to display Pop-up Menu defined for DB Edits.

Example

-- To display the error message for un-qualified lookup
PROPERTY <DBEditCompID> SuppressPopupErrorMessage 'FALSE'
RETURN

CONDENSECAPTION

- Value

Specifies how the contents of the text is displayed in situations where the text is too long for the display area.

Options:

. None
. AtEnd
. WithinPath

When set to AtEnd, if the Caption does not fit within the control's bounds, the end of the string is replaced with an ellipsis (...). When set to WithinPath, the Caption is condensed so that the start and end of the path string is displayed within the bounds of the control.

LAYOUT

- CENTER

Specifies how the text of the label is placed within the client rectangle of the label control.
- TOP

Specifies how the text of the label is placed within the client rectangle of the label control.
- BOTTOM

Specifies how the text of the label is placed within the client rectangle of the label control.

BORDERCOLOR	<div><div>Value</div><div>Use this property to specify the color used to fill the region between the inner and outer borders.</div><div>Available Values:<div>AQUA BLACK BLUE CREAM DARK GRAY FUCHSIA GRAY GREEN LIME LIGHT GRAY MAROON MEDIUM GRAY MINT GREEN NAVY OLIVE PURPLE RED SILVER SKY BLUE TEAL WHITE YELLOW</div></div></div>
ACTIVECOLOR	<div><div>Value</div><div>Specifies the color to be used to draw the Caption of the E-Mail Label that has not yet been clicked on by the user. The default value is Highlight.</div></div>
PASSIVECOLOR	<div><div>Value</div><div>Specifies the color to be used to draw the Caption of the E-Mail Label that has been clicked on by the user. The default value is Purple.</div></div>
ROTATION	<div><div><div>CURVE</div><div>Determines how the label is rotated. When Rotation is set to Curve, the label is displayed along the curve defined by the bounding rectangle.</div><div>The CenterPoint property can be used to alter the curve.</div><div>FLAT</div><div>Determines how the label is rotated. When set to Flat, the label is rotated within the center of the bounding rectangle at the angle specified in the Angle property.</div><div>NONE</div><div>Determines how the label is rotated. When Rotation is set to None, no rotation is performed.</div></div></div>
SHADOWCOLOR	<div><div>Value</div><div>Specifies the shadow color used in the 3D text styles.</div></div>
SHADOWDEPTH	<div><div>nnn</div><div>Specifies how far down and to the right the shadow text will be displayed from the main text. This property is only applicable when "Text Style" is set to Shadow.</div></div>

Control	Property	Value
---------	----------	-------

Database Controls

DB E-Mail Label

SHOWACCELCHAR

TRUE

Specifies if the text will display letter underscoring for a keyboard shortcut (hot key) when the ampersand (&) character is added to the caption.

FALSE

Specifies if the text will display letter underscoring for a keyboard shortcut (hot key) when the ampersand (&) character is added to the caption.

ANGLE

nnn

Specifies the angle used to rotate the label.

CENTERPOINT

Value

Specifies the origin of the curve used when drawing the label, and when the Rotation is set to Curve.

The center position can be any one of the nine locations defined by the bounding rectangle:

UpperLeft	UpperCenter	UpperRight
LeftCenter	Center	RightCenter
LowerLeft	LowerCenter	LowerRight

CC

Value

Use the property to specify the carbon copy string for the message.

BCC

Value

Use the property to specify the blind carbon copy string for the message.

BODYTEXT

Value

Use the property to specify the body string for the message.

FORCEREFRESHVALUE

TRUE

In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed).

PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

CaptureFromVideoEx

Format Width Height Timeout Display'	<p>The CaptureFromVideoEx parameter will display a dialog window to take a picture from any Windows camera. The "Ex" in CaptureFromVideoEx signifies the expanded functionality to capture an image by accepting an image format type, maximum width, and maximum height, along with the automated options to capture a picture after a specified wait time and whether or not to show the camera dialog. The maximum width, maximum height, timeout, and dialog display values are optional.</p> <p>Syntax:</p> <pre>PROPERTY ComponentID CapturefromVideoEx '<Format> <MaximumWidth> <MaximumHeight> <TimeoutInMs> <SHOW_CAMERA HIDE_CAMERA>'</pre> <p><Format> - specifies the image format. Valid formats for the image type are BMP, JPG, and PNG. The default is BMP.</p> <p><MaximumWidth> - specifies the maximum image width</p> <p><MaximumHeight> - specifies the maximum image height</p> <p><TimeoutInMs> - specifies the auto-click wait time in milliseconds. The default is zero.</p> <p><SHOW_CAMERA HIDE_CAMERA> - specifies to show or hide the camera. The default is SHOW_CAMERA.</p> <p>Please note that the possible numeric dimension portions of the parameters are a "maximum" value, and not the target value. If the width of the source is smaller, then that size will be used. If the width of the source is larger, then it will be resized to the specified maximum width. If no numeric parameter is passed, then no resizing will occur.</p> <p>The ability to individually specify a maximum width or maximum height, or both, provides the ability to resize the image so that the final image fits inside the given dimension while preserving the aspect ratio. Depending on the specified value pair, sometimes the width will be the limiting factor, and sometimes it will be the height.</p> <p>Examples:</p> <p>To capture a JPG image with a maximum width of 350 pixels use the following:</p> <pre>PROPERTY EmployeePhoto CapturefromVideoEx 'JPG 350'</pre> <p>To capture a JPG image, and keep whatever size the source provides, use the following:</p> <pre>PROPERTY EmployeePhoto CapturefromVideoEx 'JPG'</pre> <p>If you wish to capture a PNG image with a maximum height of 200 pixels, use the following:</p> <pre>PROPERTY EmployeePhoto CaptureFromVideoEx 'PNG 0 200'</pre> <p>If you wish to capture a PNG image with a maximum width and height of 100 pixels, use the following:</p> <pre>PROPERTY EmployeePhoto CaptureFromVideoEx 'PNG 100 100'</pre> <p>If you wish to capture a JPG image automatically after two seconds without displaying the camera dialog using a maximum width and height dimensions of 320x240 pixels, use the following:</p> <pre>PROPERTY EmployeePhoto CaptureFromVideoEx 'JPG 320 240 2000 HIDE_CAMERA'</pre>
--------------------------------------	---

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>DB Image</div>		
CaptureFromVideoEx		<p>Notes:</p> <ul style="list-style-type: none"> . The DB Image control must be assigned to a VARBIT data type column. . After the device is selected, the supported resolutions are listed in a drop-down on the right. If a dimension is specified with CaptureFromVideoEx, the resolution size options are hidden. If no size option is specified, then the drop-down will be displayed. . The control cannot be set to read only.
DEVI CECAMERAS		
	Value	Returns a comma separated list of attached camera devices.
DEFAULTCAMERA		
	Value	Sets the active camera for taking a picture.
	PROPERTY	ImageCtrl DefaultCamera .vCamera
		The GETPROPERTY command returns the last camera used to take a picture. If a picture has not been taken yet, this returns the first devices detected.
		GETPROPERTY ImageCtrl DefaultCamera vCamera
DEFAULTRESOLUTION		
	Value	Sets the default resolution for the active camera.
	PROPERTY	ImageCtrl DefaultResolution .vCameraRes
		The GETPROPERTY command returns the default resolution of the camera.
		GETPROPERTY ImageCtrl DefaultResolution 'vCameraRes'
LOWRESOLUTIONVIEWFINDER		
	TRUE	Specifies the camera capture functionality will use a low-resolution feed for the view finder, but still take a picture using the target resolution. The option makes the camera more responsive. Note that when this property is checked (True), there will be a slight pause in the view finder when the picture is taken. This is because the camera will reset to the target resolution and take the actual picture.
	FALSE	Specifies the camera capture functionality will use a low-resolution feed for the view finder, but still take a picture using the target resolution. The option makes the camera more responsive. Note that when this property is checked (True), there will be a slight pause in the view finder when the picture is taken. This is because the camera will reset to the target resolution and take the actual picture.
PHOTOCAPTURED		
	VarName	Checks to verify if a photo was captured successfully. The property should be used after using CaptureFromVideoEx. The returned value is True/False.
DEVI CECAMERACOUNT		
	VarName	Captures the number of camera devices that can be detected.
CHECKCAMERAACCESS[nn]		
	VarName	Tests if a camera can be accessed using a zero-based index on the camera.
		Example:
		GETPROPERTY EmployeePhoto 'CheckCameraAccess[0]' vCameraAccess

Control	Property	Value
Database Controls		
DB Check Box		
ENABLED	TRUE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
	FALSE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
HEIGHT	nnn	Use the Height property to read or change the height of the control.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
NULLASUNCHECKED	TRUE	When this property is True, the check box displays a NULL field using the Unchecked state instead of the default Grayed state.
	FALSE	When this property is True, the check box displays a NULL field using the Unchecked state instead of the default Grayed state.
READONLY	TRUE	Determines whether the user can change the text of the edit control.
	FALSE	Determines whether the user can change the text of the edit control.
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.

Control	Property	Value
---------	----------	-------

Database Controls

DB Check Box

TRANSPARENT	TRUE	Specifies whether controls that sit below the checkbox on a form can be seen through the checkbox.
	FALSE	Specifies whether controls that sit below the checkbox on a form can be seen through the checkbox.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
ALIGNMENTVERTICAL	BOTTOM	Specifies the vertical alignment of the caption within the component's bounding rectangle.
	TOP	Specifies the vertical alignment of the caption within the component's bounding rectangle.
	CENTER	Specifies the vertical alignment of the caption within the component's bounding rectangle.
FILLCOLOR	Value	Specifies the color used to fill in the interior of a status component.
READONLYCOLOR	Value	Specifies the background color of the control when the control's Read Only property is set to True.
TEXTHIGHLIGHTCOLOR	Value	Specifies the color to be used in displaying (3D) highlighted areas of text.
TEXTSHADOWCOLOR	Value	Specifies the color to be used in displaying (3D) shadow areas of text.
TEXTSHADOWDEPTH	nnn	Specifies the depth (in pixels) the text shadow appears below the text.
TEXTSTYLE	Value	Specifies the 3D style used to display the control's Caption. Options include: . Normal . Raised . Recessed . Shadow
FORCEREFRESHVALUE	TRUE	In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed). PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'

Database Controls

DB Check Box

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>DB Radio Button</div>		
ALIGNMENT		
	LEFT	Text is left-justified: Lines all begin at the left edge of the control.
	RIGHT	Text is left-justified: Lines all begin at the left edge of the control.
CAPTION		
	CAPTION	Specifies the text string that the Label displays.
		Use Caption to specify the text that the Label displays.
		To underline a character in a Caption, include the ampersand (&) before the character. This type of character is called an accelerator character.
COLOR		
	Value	Specifies the background color of the control.
		Available Values:
		AQUA
		BLACK
		BLUE
		CREAM
		DARK GRAY
		FUCHSIA
		GRAY
		GREEN
		LIME
		LIGHT GRAY
		MAROON
		MEDIUM GRAY
		MINT GREEN
		NAVY
		OLIVE
		PURPLE
		RED
		SILVER
		SKY BLUE
		TEAL
		WHITE
		YELLOW
ENABLED		
	TRUE	Controls whether the control responds to mouse, keyboard, and timer events.
		Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.
		To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
	FALSE	Controls whether the control responds to mouse, keyboard, and timer events.
		Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.
		To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

DB Radio Group

RADIOBUTTONS[N]->CHECKED

- TRUE

Assigns a value to the specified button in a DB/Variable RadioGroup.

Syntax:

PROPERTY DBRadioGroupCompID RADIOBUTTONS[n]->CHECKED 'value'

Where:

[n] is the sequence number of the buttons in a RadioGroup
value = TRUE or FALSE

Example 01:

PROPERTY MyRadioGroup RADIOBUTTONS[0]->CHECKED 'TRUE'

Will assign the TRUE value to the first button in a RadioGroup with the ComponentID "MyRadioGroup".

Example 02:

PROPERTY MyRadioGroup RADIOBUTTONS[1]->CHECKED 'FALSE'

Will assign the FASLE value to the second button in a RadioGroup with ComponentID "MyRadioGroup".

Example 03:

PROPERTY MyRadioGroup RADIOBUTTONS[2]->CHECKED 'TRUE'

Will assign the TRUE value to the third button in a RadioGroup with ComponentID "MyRadioGroup".

FALSE

Assigns a value to the specified button in a DB/Variable RadioGroup.

Syntax:

PROPERTY DBRadioGroupCompID RADIOBUTTONS[n]->CHECKED 'value'

Where:

[n] is the sequence number of the buttons in a RadioGroup
value = TRUE or FALSE

Example 01:

PROPERTY MyRadioGroup RADIOBUTTONS[0]->CHECKED 'TRUE'

Will assign the TRUE value to the first button in a RadioGroup with the ComponentID "MyRadioGroup".

Example 02:

PROPERTY MyRadioGroup RADIOBUTTONS[1]->CHECKED 'FALSE'

Will assign the FASLE value to the second button in a RadioGroup with ComponentID "MyRadioGroup".

Example 03:

Database Controls

DB Radio Group

GROUPSTYLE

Value Determines the appearance of the group box.

Available Options:

- . Standard
- . Custom
- . TopLine
- . Flat
- . Banner
- . Underline

When Custom is selected, the border's appearance is defined by the border properties. When TopLine is selected, only the top border of the group box is displayed. This format is used quite frequently in Microsoft Office applications.

FORCEREFRESHVALUE

TRUE In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed).

```
PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'
```

CLICKONLYINITEMS

TRUE Specifies a mouse click only registers when the action occurs upon a radio button item. The default is false.

FALSE Specifies a mouse click only registers when the action occurs upon a radio button item. The default is false.

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

Database Controls

DB Lookup Combo Box

ENABLED	TRUE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
	FALSE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
FLATBUTTONS	TRUE	This property controls whether or not the buttons embedded in each of these controls appears as a normal 3D button or with the Flat style. When set to True, the buttons appear without any border until the mouse is positioned over the button. For combo boxes, the button appears with a border, when the mouse is positioned anywhere on the control.
	FALSE	This property controls whether or not the buttons embedded in each of these controls appears as a normal 3D button or with the Flat style. When set to True, the buttons appear without any border until the mouse is positioned over the button. For combo boxes, the button appears with a border, when the mouse is positioned anywhere on the control.
FRAMEVISIBLE	TRUE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
	FALSE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
ITEMHEIGHT	nnn	Specifies the height, in pixels, of the items in the drop-down list.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
REFRESHLIST	TRUE	Specifies whether to refresh the item list.
	FALSE	Specifies whether to refresh the item list.

SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
SHOWLINES	TRUE	This property used for draw the vertical lines in drop-down list.
	FALSE	This property used for draw the vertical lines in drop-down list.
TABORDER		
	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP		
	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP		
	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH		
	nnn	Specifies the horizontal size of the control or form in pixels.
LISTOPEN	TRUE	Will open drop-down list.
	FALSE	Will close opened drop-down list.
MAKECLICK		
	n	Use this property to automatically click on the item number in the control.
		Syntax:
		PROPERTY ComponentID MAKECLICK 'n'
		Where n is the item number in the control to click on.
TEXTVALUE	value	To allow the programmer direct access to the TEXT value within the control.
SHOWHORIZONTALINES	TRUE	Specifies the display of horizontal lines in the control.
	FALSE	Specifies the display of horizontal lines in the control.
ITEMINDEX		
	nnn	Specifies the ordinal number of the selected item in the control's item list.

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>DB Lookup Combo Box</div>

Database Controls

DB Lookup List Box

ALIGN

- NONE

Determines how the control aligns within its container (parent control).
- TOP

Determines how the control aligns within its container (parent control).
- BOTTOM

Determines how the control aligns within its container (parent control).
- LEFT

Determines how the control aligns within its container (parent control).
- RIGHT

Determines how the control aligns within its container (parent control).
- CLIENT

Determines how the control aligns within its container (parent control).

ALIGNMENT

- LEFT

Text is left-justified: Lines all begin at the left edge of the control.
- CENTER

Text is centered in the control.
- RIGHT

Text is right-justified: Lines all end at the right edge of the control.

COLOR

- Value

Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

COLUMNS

- nnn

Specifies the number of columns, in a multi-column list box, that are visible without having to scroll.

HINT	<div><div>HINT</div><div>Contains the text string that can appear when the user moves the mouse over the control.</div></div>
HORZEXTENT	<div><div>nnn</div><div>Use this property to specify the virtual width of the list box. The actual width of a list box is defined by its Width property and border size. The horizontal extent must be larger than the actual width in order to display a horizontal scroll bar.</div></div>
HORZSCROLLBAR	<div><div>TRUE</div><div>When this property is set to True, a horizontal scroll bar will appear in the list box when the HorzExtent is greater than the width of the list box.</div></div> <div><div>FALSE</div><div>When this property is set to True, a horizontal scroll bar will appear in the list box when the HorzExtent is greater than the width of the list box.</div></div>
ITEMHEIGHT	<div><div>nnn</div><div>Specifies the height, in pixels, of the items in the list.</div></div>
LEFT	<div><div>nnn</div><div>Specifies the horizontal coordinate of the left edge of a component relative to its parent.</div></div>
REFRESHLIST	<div><div>TRUE</div><div>Specifies whether to refresh the item list.</div></div> <div><div>FALSE</div><div>Specifies whether to refresh the item list.</div></div>

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>DB Lookup List Box</div>		
SHOWHINT	<div>TRUE</div> <div>FALSE</div>	<div>Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.</div> <div>Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.</div>
SHOWLINES	<div>TRUE</div> <div>FALSE</div>	<div>Specifies the display of vertical line separators between items.</div> <div>Specifies the display of vertical line separators between items.</div>
TABORDER		
TABSTOP	<div>nnn</div>	Indicates the position of the control in its parent's tab order.
	<div>TRUE</div> <div>FALSE</div>	<div>Determines if the user can tab to a control.</div> <div>Determines if the user can tab to a control.</div>
TABWIDTH		
TOP	<div>nnn</div>	Specifies the size of the tabs in the list box.
	<div>nnn</div>	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	<div>TRUE</div> <div>FALSE</div>	<div>Determines whether the component appears on screen.</div> <div>Determines whether the component appears on screen.</div>
WIDTH		
	<div>nnn</div>	Specifies the horizontal size of the control or form in pixels.
MAKECLICK	<div>n</div>	Use this property to automatically click on the item number in the control.
	Syntax: PROPERTY ComponentID MAKECLICK 'n' Where n is the item number in the control to click on.	
TEXTVALUE	<div>value</div>	To allow the programmer direct access to the TEXT value within the control.
SHOWHORIZONTALINES	<div>TRUE</div> <div>FALSE</div>	<div>Specifies the display of horizontal lines in the control.</div> <div>Specifies the display of horizontal lines in the control.</div>
ITEMINDEX		
	<div>nnn</div>	Specifies the ordinal number of the selected item in the control's item list.
ITEMCOUNT	<div>VarName</div>	Represents the number of strings in the list.
	To be used for the GETPROPERTY command ONLY.	

Control	Property	Value
---------	----------	-------

Database Controls

DB Lookup List Box

BEEPONINVALIDKEY	TRUE	Determines if a beep is sounded on an invalid key press.
	FALSE	Determines if a beep is sounded on an invalid key press.
SHOWITEMHINTS	TRUE	Determines if hints are displayed for long items. When enabled, if an item is not fully displayed in the list area, a popup hint is displayed containing the full text of the item.
	FALSE	Determines if hints are displayed for long items. When enabled, if an item is not fully displayed in the list area, a popup hint is displayed containing the full text of the item.
USEGRADIENTS	TRUE	Determines if group headings are drawn with gradient fills. When enabled, the group background is drawn using a gradient from the Group Color to the Color of the list box.
	FALSE	Determines if group headings are drawn with gradient fills. When enabled, the group background is drawn using a gradient from the Group Color to the Color of the list box.
ALLOWCHANGES	TRUE	Specifies whether changes are allowed.
	FALSE	Specifies whether changes are allowed.
ZEBRASTRIPES	TRUE	Specifies if the zebra stripe color effect is displayed.
	FALSE	Specifies if the zebra stripe color effect is displayed.
ODDCOLOR	Value	Sets the background color for the odd numbered rows when the zebra stripe property is enabled.
EVENCOLOR	Value	Sets the background color for the even numbered rows when the zebra stripe property is enabled.
FORCEREFRESHVALUE	TRUE	In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed).
PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'		
CHECKBOX	TRUE	Specifies if a check box column is displayed at the far left of the list
	FALSE	Specifies if a check box column is displayed at the far left of the list
CHECKEDITEMCOUNT	VarName	Returns the number of checked items. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used.
Example:		
GETPROPERTY ListBoxID CHECKEDITEMCOUNT 'vCheckedCount'		

Database Controls

DB Lookup List Box

CHECKEDITEMS	<div>VarName</div> Returns comma-separated "key field" values of the checked items. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used. <div>Example: GETPROPERTY ListBoxID CHECKEDITEMS 'vCheckedItems'</div>
ITEMS[n]->CHECKED	<div>TRUE</div> Specifies the check status for a specific item in the list. This PROPERTY parameter is used when the "Show Check Boxes" attribute is used. <div>PROPERTY ListBoxID 'ITEMS[11]->CHECKED' 'TRUE'</div> <div>The GETPROPERTY command is used to return the checked status of clicked item. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used. GETPROPERTY ListBoxID 'ITEMS[5]->CHECKED' 'vCheckedItem'</div>
REQUIREVALUEONFORMCLOSE	<div>TRUE</div> Specifies the control is checked if it has a value in the form's "On Close" event. <div>FALSE</div> Specifies the control is checked if it has a value in the form's "On Close" event.
VALUEISREQUIREDMESSAGE	<div>Text</div> Specifies the displayed message if REQUIREVALUEONEXIT or REQUIREVALUEONFORMCLOSE is True, and a value is not entered/specified for the control.
MAKERIGHTCLICK	<div>Specifies to fire the "On Right Click" EEP for the control, simulating a mouse right click. The last parameter will accept any value for the PROPERTY command. Syntax: PROPERTY CustomerList MAKERIGHTCLICK ' '</div>
MAKEDBLCLICK	<div>Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command. Syntax: PROPERTY CustomerName MAKEDBLCLICK ' '</div>

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>DB Spin Edit</div>		
FRAMEVISIBLE	TRUE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
	FALSE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
INCREMENT	nnn	Use this property to specify the amount the Value property is incremented or decremented by when one of the spin buttons is pressed or when either the up or down arrow key is pressed. Note that the Increment property can be set to a floating point value, thus allowing non-integer increments.
INTEGERONLY	TRUE	Set this property to True to restrict values to Integers. If keyboard entry is allowed via AllowKeyEdit, the user is not allowed to enter a decimal point. Therefore, the Decimals property has no effect when IntegersOnly is True.
	FALSE	Set this property to True to restrict values to Integers. If keyboard entry is allowed via AllowKeyEdit, the user is not allowed to enter a decimal point. Therefore, the Decimals property has no effect when IntegersOnly is True.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
MAX	nnn	Use this property to specify the maximum value that can be entered.
MIN	nnn	Use this property to specify the minimum value that can be entered.
PAGESIZE	nnn	Use this property to specify the amount the Value property is incremented or decremented by when either the PgUp or PgDn key is pressed. Note that the PageSize property can be set to a floating point value, thus allowing non-integer increments
PASSWORDCHAR	c	Indicates the character, if any, to display in place of the actual characters typed in the control.
READONLY	TRUE	Determines whether the user can change the text of the edit control.
	FALSE	Determines whether the user can change the text of the edit control.
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>DB Spin Edit</div>		
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	TRUE FALSE	Determines if the user can tab to a control. Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE FALSE	Determines whether the component appears on screen. Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
READONLYCOLOR	Value	Specifies the background color of the control when set to "read only".
READONLYCOLORONFOCUS	TRUE FALSE	Enables the "Read-Only" Color if the cursor focus is on the control. Enables the "Read-Only" Color if the cursor focus is on the control.
HIDESELECTION	TRUE FALSE	Specifies whether the user is given visual feedback about the active mouse cursor selection. Specifies whether the user is given visual feedback about the active mouse cursor selection.
DIRECTION	LeftRight UpDown	Specifies the pointing direction of the arrows button. The arrows can point Up and Down (default) or Left and Right. If the Orientation property of the spin edit is set to "Horizontal" so that the buttons are side by side, it is advised to change the "Direction" property to "LeftRight". Specifies the pointing direction of the arrows button. The arrows can point Up and Down (default) or Left and Right. If the Orientation property of the spin edit is set to "Horizontal" so that the buttons are side by side, it is advised to change the "Direction" property to "LeftRight".
ORIENTATION	HORIZONTAL VERTICAL	Specifies the spin edit will have a horizontal orientation. Specifies the spin edit will have a vertical orientation.
FORCEREFRESHVALUE	TRUE	In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed).
PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'		

Database Controls

DB Spin Edit

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

Control	Property	Value
---------	----------	-------

Database Controls

DB User Defined Combo Box

ALIGN

NONE	Determines how the control aligns within its container (parent control).
TOP	Determines how the control aligns within its container (parent control).
BOTTOM	Determines how the control aligns within its container (parent control).
LEFT	Determines how the control aligns within its container (parent control).
RIGHT	Determines how the control aligns within its container (parent control).
CLIENT	Determines how the control aligns within its container (parent control).

AUTODROPDOWN

TRUE	Specifies whether the drop-down list drops down automatically in response to user keystrokes
FALSE	Specifies whether the drop-down list drops down automatically in response to user keystrokes

COLOR

Value	Specifies the background color of the control.
-------	--

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

DROPDOWNCOUNT

nnn	Specifies the maximum number of items displayed in the drop-down list.
-----	--

DROPDOWNWIDTH

nnn	This property can be used to change the width (in pixels) of the drop down list portion of a combo box. Set this property back to 0 to make the list return to its default width.
-----	---

Control	Property	Value
---------	----------	-------

Database Controls

DB User Defined Combo Box

ENABLED	TRUE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
	FALSE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
FLATBUTTONS	TRUE	This property controls whether or not the buttons embedded in each of these controls appears as a normal 3D button or with the Flat style. When set to True, the buttons appear without any border until the mouse is positioned over the button. For combo boxes, the button appears with a border, when the mouse is positioned anywhere on the control.
	FALSE	This property controls whether or not the buttons embedded in each of these controls appears as a normal 3D button or with the Flat style. When set to True, the buttons appear without any border until the mouse is positioned over the button. For combo boxes, the button appears with a border, when the mouse is positioned anywhere on the control.
FRAMEVISIBLE	TRUE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
	FALSE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
ITEMHEIGHT	nnn	Specifies the height, in pixels, of the items in the drop-down list.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
READONLY	TRUE	Determines whether the user can change the text of the edit control.
	FALSE	Determines whether the user can change the text of the edit control.

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>DB User Defined Combo Box</div>		
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
LISTOPEN	TRUE	Will open drop-down list.
	FALSE	Will close opened drop-down list.
LISTITEMS	LISTITEMS	Can be used to Get/Set ComboBox items. Must be delimited by separator character.
LISTCOUNT	nnn	Represents the number of strings in the drop-down list. To be used for GETPROPERTY command ONLY.
LISTITEMSADD	TEXT	Can be used to add text line to COMBOBOX items-list.
LISTITEMSDELETE	nnn	Can be used for delete nnn item from Items List.
SELECTION	TEXT	To retrieve currently selected item text. To be used for GETPROPERTY Command ONLY.
DELIMITER	CHAR	Can be used to Get or Set delimiter character for List Items
ITEMINDEX	nnn	Specifies the ordinal number of the selected item in the control's item list.

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>DB User Defined Combo Box</div>		
LOAD_FROM_FILE	FILENAME	Will load Items list from file.
LISTITEMSCLEAR	TRUE	Will clear the items list.
LISTITEMSREFRESH	TRUE	Will refresh items in the Items List
SAVE_TO_FILE	FILENAME	Will save Items List to file.
LISTITEMSADDDDELIMITEDTEXT	TEXT	Will add Items to the List. All Items must be separated by delimiter character.
SHOWHORIZONTALINES	TRUE	Specifies the display of horizontal lines in the control.
	FALSE	Specifies the display of horizontal lines in the control.
MAKECLICK	n	Use this property to automatically click on the item number in the control. Syntax: PROPERTY ComponentID MAKECLICK 'n' Where n is the item number in the control to click on.
ITEMCOUNT	VarName	Represents the number of strings in the list. To be used for the GETPROPERTY command ONLY.
READONLYCOLOR	Value	Specifies the background color of the control when set to "read only".
READONLYCOLORONFOCUS	TRUE	Enables the "Read-Only" Color if the cursor focus is on the control.
	FALSE	Enables the "Read-Only" Color if the cursor focus is on the control.
ALLOWCHANGES	TRUE	Specifies whether changes are allowed.
	FALSE	Specifies whether changes are allowed.
ZEBRASTRIPE	TRUE	Specifies if the zebra stripe color effect is displayed.
	FALSE	Specifies if the zebra stripe color effect is displayed.
ODDCOLOR	Value	Sets the background color for the odd numbered rows when the zebra stripe property is enabled.
EVENCOLOR	Value	Sets the background color for the even numbered rows when the zebra stripe property is enabled.

Control	Property	Value
---------	----------	-------

Database Controls

DB User Defined Combo Box

ALIGNMENT

- LEFT

Text is left-justified: Lines all end at the left edge of the control.
- CENTER

Text is centered in the control.
- RIGHT

Text is right-justified: Lines all end at the right edge of the control.

BEEPONINVALIDKEY

- TRUE

Determines if a beep is sounded on an invalid key press.
- FALSE

Determines if a beep is sounded on an invalid key press.

FRAMEHOTTRACK

- TRUE

Determines if the control switches between Frame Style and Frame Hot Style when mouse is over the control or has focus.

When this property is enabled (and Frame Visible is enabled), the frame of the control toggles between the Frame Style and the Frame Hot Style settings. Specifically, when the mouse is positioned over the control or the control has the input focus, the frame is drawn using the Frame Hot Style setting. When the mouse is not positioned over the control and the control does not have the input focus, the frame is drawn using the Frame Style.
- FALSE

Determines if the control switches between Frame Style and Frame Hot Style when mouse is over the control or has focus.

When this property is enabled (and Frame Visible is enabled), the frame of the control toggles between the Frame Style and the Frame Hot Style settings. Specifically, when the mouse is positioned over the control or the control has the input focus, the frame is drawn using the Frame Hot Style setting. When the mouse is not positioned over the control and the control does not have the input focus, the frame is drawn using the Frame Style.

FORCEREFRESHVALUE

- TRUE

In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed).

PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'

ALLOWDROPDOWNWHENREADONLY

- TRUE

Specifies if the dropdown menu can be accessed, even if the value is read only.
- FALSE

Specifies if the dropdown menu can be accessed, even if the value is read only.

REQUIREVALUEONFORMCLOSE

- TRUE

Specifies the control is checked if it has a value in the form's "On Close" event.
- FALSE

Specifies the control is checked if it has a value in the form's "On Close" event.

VALUEISREQUIREDMESSAGE

- Text

Specifies the displayed message if REQUIREVALUEONEXIT or REQUIREVALUEONFORMCLOSE is True, and a value is not entered/specified for the control.

Database Controls

DB User Defined Combo Box

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

Control	Property	Value
---------	----------	-------

Database Controls

DB User Defined List Box

ALIGN

- NONE

Determines how the control aligns within its container (parent control).
- TOP

Determines how the control aligns within its container (parent control).
- BOTTOM

Determines how the control aligns within its container (parent control).
- LEFT

Determines how the control aligns within its container (parent control).
- RIGHT

Determines how the control aligns within its container (parent control).
- CLIENT

Determines how the control aligns within its container (parent control).

COLOR

Value

Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

COLUMNS

nnn

Specifies the number of columns, in a multi-column list box, that are visible without having to scroll.

Control	Property	Value
---------	----------	-------

Database Controls

DB User Defined List Box

ENABLED	TRUE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
	FALSE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
FRAMEVISIBLE	TRUE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
	FALSE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
HORZEXTENT	nnn	Use this property to specify the virtual width of the list box. The actual width of a list box is defined by its Width property and border size. The horizontal extent must be larger than the actual width in order to display a horizontal scroll bar.
HORZSCROLLBAR	TRUE	When this property is set to True, a horizontal scroll bar will appear in the list box when the HorzExtent is greater than the width of the list box.
	FALSE	When this property is set to True, a horizontal scroll bar will appear in the list box when the HorzExtent is greater than the width of the list box.
ITEMHEIGHT	nnn	Specifies the height, in pixels, of the items in the list.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
READONLY	TRUE	Determines whether the user can change the text of the edit control.
	FALSE	Determines whether the user can change the text of the edit control.

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>DB User Defined List Box</div>		
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TABWIDTH	nnn	Specifies the size of the tabs in the list box.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
DELIMITER	CHAR	Can be used to Get or Set delimiter character for List Items
LISTITEMS	LISTITEMS	Can be used to Get/Set ListBox items. Must be delimited by separator character.
LISTITEMSADD	TEXT	Can be used to add text line to LISTBOX items-list.
LISTITEMSCLEAR	TRUE	Will clear the items list.
LISTITEMSDELETE	nnn	Can be used for delete nnn item from Items List.
SELECTION	TEXT	Can be used to retrieve currently selected item text.
ITEMINDEX	nnn	Specifies the ordinal number of the selected item in the control's item list.
LISTCOUNT	nnn	Represent the number of strings in Items list.
		To be used for GETPROPERTY command ONLY.
LOAD_FROM_FILE	FILENAME	Will load Items list from file.

Control	Property	Value
---------	----------	-------

Database Controls

DB User Defined List Box

LISTITEMSREFRESH	TRUE	Will refresh items in the Items List
SCROLLWIDTH	nnn	<p>Specifies the width, in pixels, by which the list box can scroll horizontally.</p> <p>Use ScrollWidth to get or set the logical width of the list box. When ScrollWidth is greater than the client width of the list box, the list box gets a horizontal scrollbar. When ScrollWidth is less than or equal to ClientWidth, the horizontal scrollbar disappears.</p>
SAVE_TO_FILE	FILENAME	Will save Items List to file.
LISTITEMSADDDDELIMITEDTEXT	TEXT	Will add Items to the List. All Items must be separated by delimiter character.
SELECT	value	<p>Can be used to highlight/select the specified item. (WRITEONLY, no support for GETPROPERTY).</p> <p>Example:</p> <p>PROPERTY <ListBoxComponentID> SELECT 6</p> <p>Will highlight/select item number 6 in ListBox</p>
UNSELECT	value	<p>Can be used to un-highlight/un-select the specified item. (WRITEONLY, no support for GETPROPERTY).</p> <p>Example:</p> <p>PROPERTY <ListBoxComponentID> UNSELECT 6</p> <p>Will un-highlight/un-select Item number 6 in ListBox</p>
CHECKINDEX	value	<p>Can be used to specify which ListBox Index number will be checked for highlighting.</p> <p>Example:</p> <p>PROPERTY <ListBoxComponentID> CHECKINDEX 6</p> <p>Will check item at ListBox Index number 6.</p>
SELECTEDSTATE	varname	<p>Can be used to check the highlighting state ('TRUE' or 'FALSE') of the CHECKINGINDEX item. (READONLY and only supported for GETPROPERTY command).</p> <p>Example:</p> <p>GETPROPERTY <ListBoxComponentID> SELECTEDSTATE varname</p> <p>will retrieve the highlighted status of item at ListBox Index item 6.</p>
SHOWHORIZONTALINES	TRUE FALSE	<p>TRUE Specifies the display of horizontal lines in the control.</p> <p>FALSE Specifies the display of horizontal lines in the control.</p>

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>DB User Defined List Box</div>		
MAKECLICK	n	<p>Use this property to automatically click on the item number in the control.</p> <p>Syntax:</p> <p>PROPERTY ComponentID MAKECLICK 'n'</p> <p>Where n is the item number in the control to click on.</p>
ITEMCOUNT	VarName	<p>Represents the number of strings in the list.</p> <p>To be used for the GETPROPERTY command ONLY.</p>
BEEPONINVALIDKEY	TRUE FALSE	<p>Determines if a beep is sounded on an invalid key press.</p> <p>Determines if a beep is sounded on an invalid key press.</p>
SHOWITEMHINTS	TRUE FALSE	<p>Determines if hints are displayed for long items. When enabled, if an item is not fully displayed in the list area, a popup hint is displayed containing the full text of the item.</p> <p>Determines if hints are displayed for long items. When enabled, if an item is not fully displayed in the list area, a popup hint is displayed containing the full text of the item.</p>
USEGRADIENTS	TRUE FALSE	<p>Determines if group headings are drawn with gradient fills. When enabled, the group background is drawn using a gradient from the Group Color to the Color of the list box.</p> <p>Determines if group headings are drawn with gradient fills. When enabled, the group background is drawn using a gradient from the Group Color to the Color of the list box.</p>
ALLOWCHANGES	TRUE FALSE	<p>Specifies whether changes are allowed.</p> <p>Specifies whether changes are allowed.</p>
ZEBRASTRIPE	TRUE FALSE	<p>Specifies if the zebra stripe color effect is displayed.</p> <p>Specifies if the zebra stripe color effect is displayed.</p>
ODDCOLOR	Value	Sets the background color for the odd numbered rows when the zebra stripe property is enabled.
EVENCOLOR	Value	Sets the background color for the even numbered rows when the zebra stripe property is enabled.
FORCEREFRESHVALUE	TRUE	<p>In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed).</p> <p>PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'</p>

Control	Property	Value

Database Controls

DB User Defined List Box

CHECKBOX

- TRUE

Specifies if a check box column is displayed at the far left of the list
- FALSE

Specifies if a check box column is displayed at the far left of the list

CHECKEDITEMCOUNT

- VarName

Returns the number of checked items. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used.
- Example:

GETPROPERTY ListBoxID CHECKEDITEMCOUNT 'vCheckedCount'

CHECKEDITEMS

- VarName

Returns comma-separated "key field" values of the checked items. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used.
- Example:

GETPROPERTY ListBoxID CHECKEDITEMS 'vCheckedItems'

ITEMS[n]->CHECKED

- TRUE

Specifies the check status for a specific item in the list. This PROPERTY parameter is used when the "Show Check Boxes" attribute is used.
- PROPERTY ListBoxID 'ITEMS[11]->CHECKED' 'TRUE'
- The GETPROPERTY command is used to return the checked status of clicked item. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used.
- GETPROPERTY ListBoxID 'ITEMS[5]->CHECKED' 'vCheckedItem'

REQUIREVALUEONFORMCLOSE

- TRUE

Specifies the control is checked if it has a value in the form's "On Close" event.
- FALSE

Specifies the control is checked if it has a value in the form's "On Close" event.

VALUEISREQUIREDMESSAGE

- Text

Specifies the displayed message if REQUIREVALUEONEXIT or REQUIREVALUEONFORMCLOSE is True, and a value is not entered/specified for the control.

MAKERIGHTCLICK

Specifies to fire the "On Right Click" EEP for the control, simulating a mouse right click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerList MAKERIGHTCLICK ' '

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
ORIENTATION	HORIZONTAL	Determines the order in which records from the dataset are displayed in the Scrolling Region.
	VERTICAL	
	HORIZONTAL	
		Set Orientation to VERTICAL (the default) to have the panels ordered in rows with a vertical scroll bar. Set Orientation to HORIZONTAL to arrange panels in columns with a horizontal scroll bar.
	VERTICAL	Determines the order in which records from the dataset are displayed in the Scrolling Region.
	VERTICAL	
PANELBORDER	RAISED	Determines whether each panel is drawn with a raised border around it.
	RAISED	
	NONE	
		The default value of RAISED draws a raised border. Set PanelBorder to NONE to eliminate the border.
	NONE	Determines whether each panel is drawn with a raised border around it.
	RAISED	
	NONE	
		The default value of RAISED draws a raised border. Set PanelBorder to NONE to eliminate the border.

FALSE	Specifies whether the active tier can draw gradient colors.	
SHOWINACTIVEGRADIENT		
TRUE	Specifies whether the inactive tier can draw gradient colors.	
FALSE	Specifies whether the inactive tier can draw gradient colors.	
ACTIVEGRADIENTCOLORSTART		
Value	Specifies the active tier starting gradient color.	
ACTIVEGRADIENTCOLORSTOP		
Value	Specifies the active tier stopping gradient color.	

Database Controls

Scrolling Region

ACTIVEGRADIENTCOLORSTYLE

Value Specifies the gradient color style for the active tier.

Options:

- . System (default)
- . MSOffice
- . Custom

The option System obtains the gradient color values needed by the control from the current system colors. This value ensures that the control looks appealing regardless of the users current color scheme.

The MSOffice option mimics the Microsoft Office 2003 look when XP themes are active (i.e. blue, green, and silver backgrounds for toolbars, etc.). If XP themes are not present, then the control will utilize the System option.

The Custom option allows to specify custom start and stop color values for the gradients used in the control.

ACTIVEGRADIENTCOLORDIRECTION

Value Specifies the direction the gradient fill will flow for the active tier.

Options include:

- . BigSquareBox - Top and bottom converge together to form a big square box in the center
- . DiagonalDown - Top right to bottom left
- . DiagonalUp - Top left to bottom right
- . HorizontalBox - Top and bottom converge together to form a box in the center
- . HorizontalCenter - Top and bottom converge to the center
- . HorizontalEnd - Horizontally downward
- . SquareBox - All sides converge into a square
- . VerticalBox - Sides converge into a box
- . VerticalCenter - Sides converge into a box at the center

INACTIVEGRADIENTCOLORSTART

Value Specifies the inactive tier starting gradient color.

INACTIVEGRADIENTCOLORSTOP

Value Specifies the inactive tier stopping gradient color.

Control	Property	Value

DB Lookup List View

ROWSELECT	FALSE	Determines whether an entire row in the list view can be selected.
	TRUE	Determines whether an entire row in the list view can be selected.
SHOWCOLUMNHEADERS	FALSE	Determines whether the column headers are displayed.
	TRUE	Determines whether the column headers are displayed.
SHOWHINT	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
SHOWWORKAREAS	FALSE	Determines whether the visual properties of work areas are displayed.
	TRUE	Determines whether the visual properties of work areas are displayed.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	FALSE	Determines whether the component appears on screen.
	TRUE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control in pixels.
COLUMNS[N]->CAPTION	Value	Specifies the caption of the column value.
	Syntax:	
	PROPERTY <ListViewControlCompID> 'COLUMNS[n]->CAPTION' 'value'	
	Where:	
	The value for "n" is the column number in the list.	

Database Controls

DB Lookup List View

COLUMNS[N]->ALIGNMENT

- LEFT

Specifies the text alignment of the column value.

Syntax:

PROPERTY <ListViewControlCompID> 'COLUMNS[n]->ALIGNMENT' 'value'

Where:

The value for "n" is the column number in the list.
- RIGHT

Specifies the text alignment of the column value.

Syntax:

PROPERTY <ListViewControlCompID> 'COLUMNS[n]->ALIGNMENT' 'value'

Where:

The value for "n" is the column number in the list.
- CENTER

Specifies the text alignment of the column value.

Syntax:

PROPERTY <ListViewControlCompID> 'COLUMNS[n]->ALIGNMENT' 'value'

Where:

The value for "n" is the column number in the list.

COLUMNS[N]->MINWIDTH

- nnn

Specifies the minimum width of the column.

Syntax:

PROPERTY <ListViewControlCompID> 'COLUMNS[n]->MINWIDTH' nnn

Where:

The value for "n" is the column number in the list.

COLUMNS[N]->MAXWIDTH

- nnn

Specifies the maximum width of the column.

Syntax:

PROPERTY <ListViewControlCompID> 'COLUMNS[n]->MAXWIDTH' nnn

Where:

The value for "n" is the column number in the list.

Control	Property	Value
---------	----------	-------

Database Controls

DB Lookup List View

COLUMNS[N]->WIDTH

nnn Specifies the width of the column.

Syntax:

PROPERTY <ListViewControlCompID> 'COLUMNS[n]->WIDTH' nnn

Where:

The value for "n" is the column number in the list.

DROPPEDITEMINDEX

VarName Specifies the "item index" for a dropped item when using "Drag and Drop".

GETPROPERTY <TargetedListViewComponentID> DroppedItemIndex VarName

This parameter is only available for the GETPROPERTY command.

REFRESHLIST

TRUE This property will refresh the item list.

FALSE This property will refresh the item list.

TOPITEM

VarName Captures the TOPITEM value for the last selected row (item) in the list. TOPITEM is used to determine the first item in the list view that the user can see. TOPITEM reflects how far the list view has been scrolled.

GETPROPERTY DBListViewCompID TOPITEM vTopItem

This parameter is only available for the GETPROPERTY command.

CURRENTSORT

VarName Specifies the "current sort" for the control.

GETPROPERTY ListViewComponentID CURRENTSORT 'vCurrentSort'

The resulting variable value for vCurrentSort would be something like "Custid ASC" or "InvoiceDate DESC"

This parameter is only available for the GETPROPERTY command.

SHOWLINES

TRUE Specifies the display of vertical line separators between items.

FALSE Specifies the display of vertical line separators between items.

ITEMCOUNT

VarName Represent the number of strings in the list.

To be used for the GETPROPERTY command ONLY.

	RIGHTALIGN	Specifies the sort icon will be right aligned within the header.
	NONE	Specifies that no sort icon will displayed within the header.
	LEFTALIGN	Specifies the sort icon will be left aligned within the header.
	RIGHTOFTEXT	Specifies the sort icon will be located to the right of the header text.
COLUMN_SORT		
	FALSE	Specifies whether the control will allow ascending or descending sort by selecting the column headers.
	TRUE	Specifies whether the control will allow ascending or descending sort by selecting the column headers.
SelectedFontColor		
	Value	Specifies the font color for the selected row within the List View.
SelectedBackgroundColor		
	Value	Specifies the background color for the selected row within the List View.
SHOWROWNUMBERS		
	TRUE	Specifies if a separate row number column is displayed at the far left of the list.
	FALSE	Specifies if a separate row number column is displayed at the far left of the list.
FORCEREFRESHVALUE		
	TRUE	In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed).
	PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'	
CHECKEDROWS		
	VarName	Returns comma-separated "key field" values of the checked items. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used.
	Example:	
	GETPROPERTY ListViewID 'CHECKEDROWS' vCheckedRows	
CHECKEDROWCOUNT		
	VarName	Returns the number of checked items. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used.
	Example:	
	GETPROPERTY ListViewID 'CHECKEDROWCOUNT' vCheckedRowCount

	TRUE	Determines whether the button has a 3D border that provides a raised or lowered look.
INSERTHINT	INSERTHINT	Provides a way to customize the Help Hints for the Insert button on the database navigator.
LASTHINT	LASTHINT	Provides a way to customize the Help Hints for the Last button on the database navigator.
NEXTHINT	NEXTHINT	Provides a way to customize the Help Hints for the Next button on the database navigator.
POSTHINT	POSTHINT	Provides a way to customize the Help Hints for the Post button on the database navigator.
PRIORHINT	PRIORHINT	Provides a way to customize the Help Hints for the Prior button on the database navigator.

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>Enhanced DB Navigator</div>		
REFRESHHINT	REFRESHHINT	Provides a way to customize the Help Hints for the Refresh button on the database navigator.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
VISIBLEBUTTONS	Value	Specify the DB Navigator Bar button(s) to be visible. Values: FIRST PRIOR NEXT LAST INSERT DELETE EDIT POST CANCEL REFRESH Example 01: To only display First, Prior, Next and Last buttons on DB Navigator control PROPERTY <DBNavigatorComponentID> VisibleButtons 'FIRST, PRIOR, NEXT, LAST' RETURN Example 02: To only display Edit, Post, Cancel and Refresh buttons on DB Navigator control PROPERTY <DBNavigatorComponentID> VisibleButtons 'EDIT, POST, CANCEL, REFRESH' RETURN Example 03: To display all buttons on DB Navigator control PROPERTY <DBNavigatorComponentID> VisibleButtons + 'FIRST, PRIOR, NEXT, LAST, INSERT, DELETE, EDIT, POST, CANCEL, REFRESH' RETURN
FIRSTVISIBLE	FALSE	Specifies whether the DB Navigator Bar "First" button is visible.
	TRUE	Specifies whether the DB Navigator Bar "First" button is visible.
PRIORVISIBLE	FALSE	Specifies whether the DB Navigator Bar "Prior" button is visible.
	TRUE	Specifies whether the DB Navigator Bar "Prior" button is visible.
NEXTVISIBLE	FALSE	Specifies whether the DB Navigator Bar "Next" button is visible.
	TRUE	Specifies whether the DB Navigator Bar "Next" button is visible.

Control	Property	Value

Database Controls

Enhanced DB Navigator

LASTVISIBLE	FALSE	Specifies whether the DB Navigator Bar "Last" button is visible.
	TRUE	Specifies whether the DB Navigator Bar "Last" button is visible.
INSERTVISIBLE	FALSE	Specifies whether the DB Navigator Bar "Insert" button is visible.
	TRUE	Specifies whether the DB Navigator Bar "Insert" button is visible.
DELETEVISIBLE	FALSE	Specifies whether the DB Navigator Bar "Delete" button is visible.
	TRUE	Specifies whether the DB Navigator Bar "Delete" button is visible.
EDITVISIBLE	FALSE	Specifies whether the DB Navigator Bar "Edit" button is visible.
	TRUE	Specifies whether the DB Navigator Bar "Edit" button is visible.
POSTVISIBLE	FALSE	Specifies whether the DB Navigator Bar "Post" button is visible.
	TRUE	Specifies whether the DB Navigator Bar "Post" button is visible.
CANCELVISIBLE	FALSE	Specifies whether the DB Navigator Bar "Cancel" button is visible.
	TRUE	Specifies whether the DB Navigator Bar "Cancel" button is visible.
REFRESHVISIBLE	FALSE	Specifies whether the DB Navigator Bar "Refresh" button is visible.
	TRUE	Specifies whether the DB Navigator Bar "Refresh" button is visible.
CLOSEWINDOWVISIBLE	FALSE	Specifies whether the DB Navigator Bar "Close Window" button is visible.
	TRUE	Specifies whether the DB Navigator Bar "Close Window" button is visible.
IMAGESTYLE	Razzmatazz	Specifies the "Razzmatazz" style image buttons for the DB Navigator Bar.
	Old	Specifies the "Old" style image buttons for the DB Navigator Bar.
DUPLICATEVISIBLE	FALSE	Specifies whether the Enhanced DB Navigator Bar "Duplicate Record" button is visible.
	TRUE	Specifies whether the Enhanced DB Navigator Bar "Duplicate Record" button is visible.
DUPLICATEHINT	DUPLICATEHINT	Provides a way to customize the Help Hints for the Duplicate Record button on the database navigator.
RECNOVISIBLE	TRUE	Specifies whether the DB Navigator Bar "Record Number" field is visible.
	FALSE	Specifies whether the DB Navigator Bar "Record Number" field is visible.

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>Enhanced DB Navigator</div>		
RECORDCOUNTVISIBLE	TRUE	Specifies whether the DB Navigator Bar "Record Count" field is visible.
	FALSE	Specifies whether the DB Navigator Bar "Record Count" field is visible.
COLOR	Value	Specifies the background color of the control.
EDITCOLOR	value	Specifies the color of the "record number" and "record count" fields.
SET_RECNOFOCUS	TRUE	Sets the focus to the "record number" field.
USEINSERTASAPPEND	FALSE	Specifies if the new record is inserted within the table, or appended to the end of the table.
	TRUE	Specifies if the new record is inserted within the table, or appended to the end of the table.
AUTOSIZEBUTTONS	FALSE	Specifies if the buttons shrink or stretch automatically based on the size of the control.
	TRUE	Specifies if the buttons shrink or stretch automatically based on the size of the control.

Control	Property	Value

Database Controls

Enhanced DB Grid

SHOWGLYPHS

- TRUE

BLOB-fields in table, such as VARBIT, VARCHAR and NOTE will show as an Icon.
- FALSE

BLOB-fields in table, such as VARBIT, VARCHAR and NOTE will show as an Icon.

TABORDER

- nnn

Indicates the position of the control in its parent's tab order.

TABSTOP

- FALSE

Determines if the user can tab to a control.
- TRUE

Determines if the user can tab to a control.

'TITLES[N]->ALIGNMENT'

- RIGHT

Specifies the text alignment of the column title.

Syntax:

PROPERTY <DBGridComponentID> 'TITLES[n]->ALIGNMENT' 'Value'

GETPROPERTY <DBGridComponentID> 'TITLES[n]->ALIGNMENT' vVarValue

Where:

The value for "n" is the column title order in the grid from left to right starting with 0.
- LEFT

Specifies the text alignment of the column title.

Syntax:

PROPERTY <DBGridComponentID> 'TITLES[n]->ALIGNMENT' 'Value'

GETPROPERTY <DBGridComponentID> 'TITLES[n]->ALIGNMENT' vVarValue

Where:

The value for "n" is the column title order in the grid from left to right starting with 0.
- CENTER

Specifies the text alignment of the column title.

Syntax:

PROPERTY <DBGridComponentID> 'TITLES[n]->ALIGNMENT' 'Value'

GETPROPERTY <DBGridComponentID> 'TITLES[n]->ALIGNMENT' vVarValue

Where:

The value for "n" is the column title order in the grid from left to right starting with 0.

CURRENTCOLUMNNAME

- value

Captures the name of currently focused column in DB Grid.

Use with the GETPROPERTY Command only.

Control	Property	Value
---------	----------	-------

Database Controls

Enhanced DB Grid

SELECTEDINDEX

Value Specifies the index of the currently selected column in the Columns array.

Description:

Set SelectedIndex to move focus to a column in the grid that is identified by position. Read SelectedIndex to determine which column in the grid has focus. A value of 0 indicates the first data column, 1 is the second data column, and so on. SelectedIndex is -1 if there is no currently selected column.

If the "Indicator" setting is enabled, the index of the data column given by SelectedIndex will differ from the index of the physical column in the grid.

'COLUMNS[N]->ALIGNMENT'

RIGHT Specifies the text alignment of the column value.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->ALIGNMENT' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->ALIGNMENT' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

CENTER Specifies the text alignment of the column value.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->ALIGNMENT' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->ALIGNMENT' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

LEFT Specifies the text alignment of the column value.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->ALIGNMENT' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->ALIGNMENT' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

Control	Property	Value
---------	----------	-------

Database Controls

Enhanced DB Grid

'COLUMNS[N]->READONLY'

FALSE Indicates whether the column is used for display only, or whether the user can edit data.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->READONLY' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->READONLY' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

TRUE Indicates whether the column is used for display only, or whether the user can edit data.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->READONLY' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->READONLY' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

'COLUMNS[N]->VISIBLE'

FALSE Determines whether the column appears on screen.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->VISIBLE' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->VISIBLE' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

TRUE Determines whether the column appears on screen.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->VISIBLE' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->VISIBLE' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

'COLUMNS[N]->FONT_ITALIC'

FALSE Specifies if the font is italicized.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_ITALIC' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_ITALIC' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

TRUE Specifies if the font is italicized.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_ITALIC' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_ITALIC' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

'COLUMNS[N]->FONT_STRIKEOUT'

FALSE Specifies if the font is displayed with a horizontal line through it.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_STRIKEOUT' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_STRIKEOUT' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

TRUE Specifies if the font is displayed with a horizontal line through it.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_STRIKEOUT' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_STRIKEOUT' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

Database Controls

Enhanced DB Grid

'COLUMNS[n]->FONT_UNDERLINE'

FALSE Specifies if the font is underlined.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_UNDERLINE' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_UNDERLINE' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

TRUE Specifies if the font is underlined.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_UNDERLINE' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_UNDERLINE' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

'COLUMNS[N]->WIDTH'

nnn Specifies the horizontal size of the coolumn cell, in pixels.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->WIDTH' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->WIDTH' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

'COLUMNS->COUNT'

nnn Obtains the number of columns in the grid.

Syntax:

GETPROPERTY <DBGridComponentID> 'COLUMNS->COUNT' vVarValue

This parameter is only for the GETPROPERTY command.

Database Controls

Enhanced DB Grid

'TITLES[N]->COLOR'

Value Specifies the background color of the column title.

Syntax:

PROPERTY <DBGridComponentID> 'TITLES[n]->COLOR' 'Value'

GETPROPERTY <DBGridComponentID> 'TITLES[n]->COLOR' vVarValue

Where:

The value for "n" is the column title order in the grid from left to right starting with 0.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED

Groove</div><div>. Bump</div><div>. Lowered</div><div>. Button Down</div><div>. Raised</div><div>. Button Up</div><div>. Status</div><div>. Popup</div><div>. Flat Bold</div></div>

Control	Property	Value
---------	----------	-------

Database Controls

Enhanced DB Grid

FRAMEHOTTRACK	TRUE	Enables the frame to adjust when the mouse enters the control. When this property is enabled (and Visible Frame is also set to enabled), the frame of the control toggles between the Frame Style and the Frame Hot Style settings. Specifically, when the mouse is positioned over the control or the control has the input focus, the frame is drawn using the Frame Hot Style setting. When the mouse is not positioned over the control and the control does not have the input focus, the frame is drawn using the Frame Style.
	FALSE	Enables the frame to adjust when the mouse enters the control. When this property is enabled (and Visible Frame is also set to enabled), the frame of the control toggles between the Frame Style and the Frame Hot Style settings. Specifically, when the mouse is positioned over the control or the control has the input focus, the frame is drawn using the Frame Hot Style setting. When the mouse is not positioned over the control and the control does not have the input focus, the frame is drawn using the Frame Style.
FRAMEVISIBLE	TRUE	Specifies whether the control's frame is visible.
	FALSE	Specifies whether the control's frame is visible.
FIXEDLINECOLOR	Value	Specifies the color used when drawing the lines between the fixed cells of the grid.
HORSCROLLBARVISIBLE	FALSE	Specifies whether the horizontal scroll bar is displayed.
	TRUE	Specifies whether the horizontal scroll bar is displayed.
CLEARFILTER	TRUE	Specifies to clear a filter applied to an Enhanced DB Grid.
USEDATETIMEPICKER	TRUE	Determines if a picker is displayed for DATE (pop up) and TIME (spin edit) data type fields
	FALSE	Determines if a picker is displayed for DATE (pop up) and TIME (spin edit) data type fields
BACKGROUNDCOLORFIELD	Value	Specifies the table column storing the background color value.
FOREGROUNDCOLORFIELD	Value	Specifies the table column storing the font, or foreground, color value.
HINTFIELD	Value	Specifies the table column storing the hint text string.
FOOTERCOLOR	Value	Specifies the color for the grid footer object.
FOOTERHEIGHT	nnn	Specifies the height, in pixels, for the grid footer object.

Control	Property	Value
---------	----------	-------

Database Controls

SORTEDFILTERLIST		
	FALSE	Determines if the filtered values are sorted.
	TRUE	Determines if the filtered values are sorted.
'BANDS->COUNT'		
	VarName	Captures the Band List count in an Enhanced DB Grid.
		GETPROPERTY ComponentID BANDS->COUNT vBandCnt
		This parameter is only used with the GETPROPERTY command.
'BANDS[n]->CAPTION'		
	VarName	Specifies or captures the current caption for a given band in an Enhanced DB Grid.
		PROPERTY ComponentID BANDS[n]->CAPTION Value
		GETPROPERTY ComponentID BANDS[n]->CAPTION vBandCaption
		The value for "n" is the band item in the list from top to bottom, starting with 0.
'BANDS->FONT_NAME'		
	Value	Specifies the font name for the Band(s) in an Enhanced DB Grid.
'BANDS->FONT_COLOR'		
	Value	Specifies the font color for Band(s) in an Enhanced DB Grid.
'BANDS->FONT_SIZE'		
	Value	Specifies the font size for Band(s) in an Enhanced DB Grid.
'BANDS->FONT_HEIGHT'		
	Value	Specifies the Font height for Band(s) in an Enhanced DB Grid.
'BANDS->FONT_BOLD'		
	FALSE	Specifies the font bold style for Band(s) in an Enhanced DB Grid.
	TRUE	Specifies the font bold style for Band(s) in an Enhanced DB Grid.
'BANDS->FONT_ITALIC'		
	FALSE	Specifies the font italic style for Band(s) in an Enhanced DB Grid.
	TRUE	Specifies the font italic style for Band(s) in an Enhanced DB Grid.
'BANDS->FONT_STRIKEOUT'		
	FALSE	Specifies the font strikeout style for Band(s) in an Enhanced DB Grid.
	TRUE	Specifies the font strikeout style for Band(s) in an Enhanced DB Grid.
'BANDS->FONT_UNDERLINE'		
	FALSE	Specifies the font underline style for Band(s) in an Enhanced DB Grid.
	TRUE	Specifies the font underline style for Band(s) in an Enhanced DB Grid.

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>Enhanced DB Grid</div>		
'FILTERS->COLUMN_NAME->YourColumnName->ADD_COLUMN_VALUES'		
	TRUE	Repopulates the filter from column values, specified by column name. Example: PROPERTY EnhDBGridCust FILTERS->COLUMN_NAME->CustState->ADD_COLUMN_VALUES TRUE
DBGridBGColor_Font TABLE TableName		
	REFRESH	Refreshes the DB Grid background colors. Example: -- Start -- Form Timer EEP PROPERTY DBGridBGColor_Font TABLE EmployeeRecords REFRESH PROPERTY DBGridBGColor_Font DBGrid REPAINTGRID 'TRUE' RETURN -- End
DBGridBGColor_Font DBGrid REPAINTGRID		
	TRUE	Repaints the DB Grid background colors. Example: -- Start -- Form Timer EEP PROPERTY DBGridBGColor_Font TABLE EmployeeRecords REFRESH PROPERTY DBGridBGColor_Font DBGrid REPAINTGRID 'TRUE' RETURN -- End
'COLUMNS[N]->FILTERREADONLY'		
	FALSE	Specifies if the filter on the Enhanced DB Grid column is read only.
	TRUE	Specifies if the filter on the Enhanced DB Grid column is read only.
FOCUSONFILTERBAR		
	TRUE	Set the focus/cursor directly into the filter field for the control.
SHOWSORTDIALOG		
	TRUE	Displays a dialog window which allows sorting of the displayed the records.
CURRENTCELLVALUE		
	Value	Captures the value of currently focused cell in an Enhanced DB Grid. Use with the GETPROPERTY Command only.

Control	Property	Value

Database Controls

Enhanced DB Grid

SORTASC

Value Specifies the column index to sort the column in ascending order. The column name can also be specified.

Syntax:

PROPERTY <EnhancedDBGridComponentID> SortAsc '0'

Example (Based on RBG9_EnhancDBGrd form included with RRBW20):

-- To Dynamically Sort the first column (Company) in ascending order
PROPERTY DBGrid_Customers SortAsc '0'

-- To Dynamically Sort the second column (City) in ascending order
PROPERTY DBGrid_Customers SortAsc '1'

Alternative, you could also use the following PROPERTY syntax as well:

PROPERTY <EnhancedDBGridComponentID> SortAsc 'columnname'

-- To Dynamically Sort the first column (Company) in ascending order
PROPERTY DBGrid_Customers SortAsc 'Company'

-- To Dynamically Sort the second column (City) in ascending order
PROPERTY DBGrid_Customers SortAsc 'City'

SORTDESC

Value Specifies the column index to sort the column in descending order. The column name can also be specified.

Syntax:

PROPERTY <EnhancedDBGridComponentID> SortDesc '0'

Example (Based on RBG9_EnhancDBGrd form included with RRBW20):

-- To Dynamically Sort the first column (Company) in descending order
PROPERTY DBGrid_Customers SortDesc '0'

-- To Dynamically Sort the second column (City) in descending order
PROPERTY DBGrid_Customers SortDesc '1'

Alternative, you could also use the following PROPERTY syntax as well:

PROPERTY <EnhancedDBGridComponentID> SortDesc 'columnname'

-- To Dynamically Sort the first column (Company) in descending order
PROPERTY DBGrid_Customers SortDesc 'Company'

-- To Dynamically Sort the second column (City) in descending order
PROPERTY DBGrid_Customers SortDesc 'City'

Control	Property	Value
---------	----------	-------

Database Controls

Enhanced DB Grid

CLICKHEADER

Value Specifies the column index to sort the column title header in ascending or descending order. The column name can also be specified.

PROPERTY Command Syntax:

```
PROPERTY <EnhancedDBGridComponentID> ClickHeader '0'
```

-- Example (Based on RBG9_EnhancDBGrd form included with RRBW20)

```
-- To Dynamically Sort the first column (Company)
PROPERTY DBGrid_Customers ClickHeader '0'
```

```
-- To Dynamically Sort the second column (City)
PROPERTY DBGrid_Customers ClickHeader '1'
```

Alternative, you could also use the following PROPERTY syntax as well.

```
PROPERTY <EnhancedDBGridComponentID> ClickHeader 'columnname'
```

```
-- To Dynamically Sort the first column (Company)
PROPERTY DBGrid_Customers ClickHeader 'Company'
```

```
-- To Dynamically Sort the second column (City)
PROPERTY DBGrid_Customers ClickHeader 'City'
```

GETPROPERTY Command Syntax:

Captures the column name for the last clicked title header.

```
GETPROPERTY DBGrid_Customers ClickHeader vHeaderClicked
```

SORTORDER

Value Captures the current sort order of the currently focused column in an Enhanced DB Grid. Returned value will be 'ASC' or 'DESC'.

Use with the GETPROPERTY Command only.

FILTERTYPE

- EQUAL** Specifies the filter type for the Enhanced DB Grid
- LIKE** Specifies the filter type for the Enhanced DB Grid
- CONTAINS** Specifies the filter type for the Enhanced DB Grid

FORCEREFRESHVALUE

TRUE In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed).

```
PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'
```

ROWHEIGHTSETTINGS

nnn Specifies the grid's row height, based upon the specified row number.

Example:

```
PROPERTY CompID RowHeightSettings "2=75,5=90"
```

Control	Property	Value

'SELECTEDVALUES[NNN]'

VarName	<p>When the "Multiselect" attribute is checked, the selected rows can be captured in a comma separated values for the specified field/column.</p> <p>GETPROPERTY ComponentID 'SELECTEDVALUES[NNN]' 'VarName'</p> <p>The "NNN" inside the brace can be the column name or the zero-based grid column index, to work with the multiselect option.</p> <p>To selected multiple rows, press Ctrl+Click or Shift+Click. Use Ctrl+Click to select random rows. Use Shift+Click to select a contiguous block of rows.</p> <p>Example:</p> <pre>GETPROPERTY GridCtrl 'SELECTEDVALUES[FieldName]' 'vCSVValues'</pre> <pre>GETPROPERTY GridCtrl 'SELECTEDVALUES[0]' 'vCSVValues'</pre> <p>Use with the GETPROPERTY command only.</p>
---------	--

EXECEVENTSONCALCULATION

TRUE	<p>Specifies if navigation events are triggered when the dataset is traversed during the footer calculation. When false, footer calculations are performed faster and flickering is avoided.</p>
FALSE	<p>Specifies if navigation events are triggered when the dataset is traversed during the footer calculation. When false, footer calculations are performed faster and flickering is avoided.</p>

MINFILTERLENGTH

value	<p>Specifies the minimum character length for the filter bar to begin filtering values.</p>
-------	---

WAITCURSORONFILTER

FALSE	<p>Specifies to change the mouse cursor to an hour glass, to indicate processing (to possibly avoid end users having the impression the form is unresponsive).</p>
TRUE	<p>Specifies to change the mouse cursor to an hour glass, to indicate processing (to possibly avoid end users having the impression the form is unresponsive).</p>

DELAYFILTER

FALSE	<p>Specifies if the grid will wait for the specified milliseconds every keystroke before the filter is applied.</p>
TRUE	<p>Specifies if the grid will wait for the specified milliseconds every keystroke before the filter is applied.</p>

DELAYFILTERDURATION

value	<p>Specifies the milliseconds between every keystroke before the filter is applied. The timer is reset every time a key is pressed. It is important to not apply the filter immediately after every keystroke.</p>
-------	--

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>Enhanced DB Grid</div>		
'COLUMNS[N]->INDEX'	Value	<p>Specifies to move an Enhanced DB Grid column order at runtime. The column index or column name can be specified.</p> <p>Example:</p> <pre>-- The following moves the third column to the first position PROPERTY EnhancedDBGrid1 COLUMNS[2]->INDEX '0' -- The following moves the FIRST_NAME column to the third position PROPERTY EnhancedDBGrid1 COLUMNS[FIRST_NAME]->INDEX '2' -- The following captures the column index for the LAST_NAME column GETPROPERTY EnhancedDBGrid1 COLUMNS[LAST_NAME]->INDEX vLastNameIndex</pre>
PERSISTENTCOLUMNCOLOR	FALSE	Specifies whether the color for specific cells will not be filled with the Highlight color, when a row is selected. The setting is only recognized when "Row Select" is also enabled.
	TRUE	Specifies whether the color for specific cells will not be filled with the Highlight color, when a row is selected. The setting is only recognized when "Row Select" is also enabled.
TEXTVALUE	Value	Captures/sets the value of the "active cell" within the grid.
ENTERASTAB	TRUE	When enabled, the [Enter] key will process the user's input on that field and move to the next field or row. To move to the previous cell, use the [Shift+ENTER] key combination.
	FALSE	When enabled, the [Enter] key will process the user's input on that field and move to the next field or row. To move to the previous cell, use the [Shift+ENTER] key combination.
VISIBLEROWCOUNT	VarName	<p>Captures the visible row count displayed within the control.</p> <pre>GETPROPERTY EnhancedDBGrid1 VISIBLEROWCOUNT 'vDispRowCnt'</pre>
ALLOWEDITING	FALSE	Specifies if editing is allowed.
	TRUE	Specifies if editing is allowed.
ALWAYSSHOWEDITOR	FALSE	Specifies the grid is always in edit mode. When TRUE, the user does not have to press the [Enter] key before editing the contents of a cell. The setting depends on "ALLOWEDITING" also being set to TRUE. ALWAYSSHOWEDITOR is ignored if "ROWSELECT" is TRUE.
	TRUE	Specifies the grid is always in edit mode. When TRUE, the user does not have to press the [Enter] key before editing the contents of a cell. The setting depends on "ALLOWEDITING" also being set to TRUE. ALWAYSSHOWEDITOR is ignored if "ROWSELECT" is TRUE.
SHOWTITLES	TRUE	Specifies if titles appear at the top of the columns in the grid.

Control	Property	Value
---------	----------	-------

Database Controls

Enhanced DB Grid

SHOWINDICATOR	TRUE	Specifies if a small pointer appears in the first column to indicate which row is currently selected.
	FALSE	Specifies if a small pointer appears in the first column to indicate which row is currently selected.
COLUMNRESIZE	TRUE	Specifies if columns that are bound to fields can be resized or moved.
	FALSE	Specifies if columns that are bound to fields can be resized or moved.
SHOWCOLUMNLINES	FALSE	Specifies if lines appear between columns in the grid.
	TRUE	Specifies if lines appear between columns in the grid.
SHOWROWLINES	FALSE	Specifies if lines appear between the rows of the grid.
	TRUE	Specifies if lines appear between the rows of the grid.
ROWSELECT	FALSE	Specifies if the user can select an entire row, as well as selecting individual cells. If this options is selected, then "ALLOWEDITING" and "ALWAYSSHOWEDITOR" are ignored.
	TRUE	Specifies if the user can select an entire row, as well as selecting individual cells. If this options is selected, then "ALLOWEDITING" and "ALWAYSSHOWEDITOR" are ignored.
ALWAYSSHOWSELECTION	FALSE	Specifies if the selected cell displays the focus rectangle, even when the grid does not have focus.
	TRUE	Specifies if the selected cell displays the focus rectangle, even when the grid does not have focus.
SCROLLHINTS	FALSE	Specifies if the vertical scroll bar displays the current record number from where the focus is located.
	TRUE	Specifies if the vertical scroll bar displays the current record number from where the focus is located.
MULTILINE TITLES	FALSE	Specifies if multiline column titles are displayed.
	TRUE	Specifies if multiline column titles are displayed.
SHOWTITLE ELLIPSIS	FALSE	Suppresses the extra words of a long title value with "...".
	TRUE	Suppresses the extra words of a long title value with "...".
SHOWTEXT ELLIPSIS	FALSE	Suppresses the extra words or sentences of a long column value with "...".
	TRUE	Suppresses the extra words or sentences of a long column value with "...".

Control	Property	Value
---------	----------	-------

Database Controls

Enhanced DB Grid

SHOWRECORDNUMBER	TRUE	Specifies if the record number is displayed within a column grid on the left side of the grid.
	FALSE	Specifies if the record number is displayed within a column grid on the left side of the grid.
CELLHINTS	FALSE	Specifies if hints will be displayed above the cells.
	TRUE	Specifies if hints will be displayed above the cells.
ALLOWTABS	FALSE	When TRUE, the [TAB] key will insert [TAB] characters in the field instead of moving to the next field.
	TRUE	When TRUE, the [TAB] key will insert [TAB] characters in the field instead of moving to the next field.
THEMEAWARE	FALSE	Determines whether or not to alter the control based upon Windows operating system themes.
	TRUE	Determines whether or not to alter the control based upon Windows operating system themes.
GRIDFOCUSNAVIGATION	FALSE	Specifies whether the cursor navigation on fields require the [Enter] key to manipulate a cell contents and move up and down. When enabled, the [Enter] key is required in order to exit a field and move from row to row after editing.
	TRUE	Specifies whether the cursor navigation on fields require the [Enter] key to manipulate a cell contents and move up and down. When enabled, the [Enter] key is required in order to exit a field and move from row to row after editing.
SKIPREADONLYCOLUMNS	FALSE	Determines whether read only columns are skipped when tabbing over the fields.
	TRUE	Determines whether read only columns are skipped when tabbing over the fields.
MULTISELECT	FALSE	Allows the ability to select multiple items from the grid.
	TRUE	Allows the ability to select multiple items from the grid.
FOCUSTOFILTERCELL	ColumnIndex	Assigns the focus on a specific cell in the Enhanced DB Grid filter bar. Syntax: PROPERTY ComponentID FOCUSTOFILTERCELL ColumnIndex The ColumnIndex is the zero based column index. Example: PROPERTY Customers FILTERS->COLUMN_NAME->CompNam 'A' PROPERTY Customers FOCUSTOFILTERCELL '0'

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>Enhanced DB Grid</div>		
GRIDHASROWS	Value	Returns True or False if there are valid rows in the Enhanced DB Grid control.
		GETPROPERTY EGrid1 GRIDHASROWS vRowsExist
PRGMIN	n	Specifies the minimum value allowed for the progress bar display.
PRGMAX	n	Specifies the maximum value allowed for the progress bar display.
PRGCOLOR	Value	Specifies the color for the progress bar.
PRGVALSHOWN	FALSE	Specifies if the value in the percentage is displayed.
	TRUE	Specifies if the value in the percentage is displayed.
PRGVALCOLOR	Value	Specifies the color of text displaying the progress percentage.
PRGVALPOS	LEFT	Specifies the text position of the progress percentage is left justified, relative to the cell.
	RIGHT	Specifies the text position of the progress percentage is right justified, relative to the cell.
	PROGRESSCENTER	Specifies the text position of the progress percentage is center justified, relative to the progress bar.
	PROGRESSRIGHT	Specifies the text position of the progress percentage is right justified, relative to the progress bar.
	CENTER	Specifies the text position of the progress percentage is center justified, relative to the cell.
FILTEREDROWCOUNT	VarName	Returns the number of rows when the grid is filtered.
HASFILTER	VarName	Returns TRUE or FALSE for whether the grid has a filter applied.
CURRENTFILTERCOLUMNNAME	VarName	Captures the field/column name where the focus is clicked for the column filter.
CURRENTWHERE	VarName	Captures the current WHERE Clause for the grid control. CURRENTWHERE will return the combination of the form-level WHERE Clause and grid-level filter.
CURRENTSORT	VarName	Captures the current ORDER BY for the grid control.

Form Controls and Properties		Database Controls
Control	Property	Value
Database Controls		
Advanced DB Rich Edit		
PLAINTEXT		
	TRUE	Controls whether the rich edit control treats the text as plain text or rich text when streaming to or from a file, variable or database field. To write the rich text in the control to a plain text file, set PlainText to True before streaming the text to a file. To ignore the rich text information encoded in a file, set PlainText to True before streaming the text to the control. To stream in the rich text attributes encoded in a file, or save the encoding of the rich text attributes to a file, set PlainText to False. If the rich text attributes of a file are encoded in some format other than rich text format (RTF), it is necessary to use a converter on the text, even when PlainText is True. Note: Rich edit controls do not directly support streaming. Use the Lines property to stream to or from a file.
	FALSE	Controls whether the rich edit control treats the text as plain text or rich text when streaming to or from a file, variable or database field. To write the rich text in the control to a plain text file, set PlainText to True before streaming the text to a file. To ignore the rich text information encoded in a file, set PlainText to True before streaming the text to the control. To stream in the rich text attributes encoded in a file, or save the encoding of the rich text attributes to a file, set PlainText to False. If the rich text attributes of a file are encoded in some format other than rich text format (RTF), it is necessary to use a converter on the text, even when PlainText is True. Note: Rich edit controls do not directly support streaming. Use the Lines property to stream to or from a file.
READONLY		
	TRUE	Determines whether the user can change the text of the edit control.
	FALSE	Determines whether the user can change the text of the edit control.
SHOWHINT		
	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER		
	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP		
	FALSE	Determines if the user can tab to a control.
	TRUE	Determines if the user can tab to a control.
TOP		
	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE		
	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>Advanced DB Rich Edit</div>		
WANTRETURNS	TRUE	Determines whether the user can insert return characters into the text.
	FALSE	Determines whether the user can insert return characters into the text.
WANTTABS	TRUE	Determines whether the user can insert tab characters into the text.
	FALSE	Determines whether the user can insert tab characters into the text.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
WORDWRAP	FALSE	Determines whether the edit control inserts soft carriage returns so text wraps at the right margin.
	TRUE	Determines whether the edit control inserts soft carriage returns so text wraps at the right margin.
SHOW_EDITOR	LASTCHAR	Specifies that the cursor will be placed at the end of the existing data paragraph to continue editing.
	TRUE	Will bring up the Note/BLOB Field Viewer/Editor with [RTF] tab as default.
READONLYCOLOR	Value	Specifies the background color of the control when set to "read only".
READONLYCOLORONFOCUS	TRUE	Enables the "Read-Only" Color if the cursor focus is on the control.
	FALSE	Enables the "Read-Only" Color if the cursor focus is on the control.
SET_FOCUS	TRUE	Gives the input focus to the control. If parent form is not the active form, it will become the active form as well.
		<p>SET_FOCUS may demonstrate negative effects in some scenarios, as its use steals the focus on a global level. That means, if a control in a non active form gets a SET_FOCUS, the non active form becomes the active form and the control is given the focus. This behavior does not blend well with popup forms (Pop-up Menu, CHOOSE, etc.) that are shown during focus transition.</p> <p>As such, SET_ACTIVE_CONTROL or DELAYED_SET_ACTIVE_CONTROL is recommended. Please refer to these topics within the "Miscellaneous" category.</p>
DISABLEDBLCLICK	FALSE	Specifies if the ability to double click on the control is disabled.
	TRUE	Specifies if the ability to double click on the control is disabled.
LOAD_FROM_FILE	FileName.rtf	Loads a rich text document into the control.
		<p>Example:</p> <pre>PROPERTY TABLE Contact 'EDIT' PROPERTY AdvancedDBRichEdit LOAD_FROM_FILE 'ContactAgreement_638.RTF' PROPERTY AdvancedDBRichEdit SHOW_EDITOR TRUE</pre>

Database Controls

Advanced DB Rich Edit

AUTOSCROLLCONTENT		
FALSE	Specifies whether to begin scrolling for the content of the control.	
	The scrolling may only be assigned (TRUE/FALSE) at runtime with the PROPERTY command.	
	Use the "Auto-Scroll Interval" setting within the Form Designer to assign the scroll interval (in milliseconds).	
TRUE	Specifies whether to begin scrolling for the content of the control.	
	The scrolling may only be assigned (TRUE/FALSE) at runtime with the PROPERTY command.	
	Use the "Auto-Scroll Interval" setting within the Form Designer to assign the scroll interval (in milliseconds).	

Control	Property	Value

Database Controls

DB Time Picker

BEVELWIDTH

nnn Use BevelWidth to specify how wide the inner or outer bevel should be.

COLOR

Value Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

ENABLED

FALSE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

TRUE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

DB Time Picker																				
FORMAT																				
	FORMAT	Specify format for date-time string.																		
	<table><tr><th>Element</th><th>Description</th></tr><tr><td>h</td><td>The one- or two-digit hour in 12-hour format.</td></tr><tr><td>hh</td><td>The two-digit hour in 12-hour format. Single-digit values are preceded by a zero.</td></tr><tr><td>H</td><td>The one- or two-digit hour in 24-hour format.</td></tr><tr><td>HH</td><td>The two-digit hour in 24-hour format. Single-digit values are preceded by a zero.</td></tr><tr><td>m</td><td>The one- or two-digit minute.</td></tr><tr><td>mm</td><td>The two-digit minute. Single-digit values are preceded by a zero.</td></tr><tr><td>t</td><td>The one-letter AM/PM abbreviation (that is, AM is displayed as "A").</td></tr><tr><td>tt</td><td>The two-letter AM/PM abbreviation (that is, AM is displayed as "AM").</td></tr></table>		Element	Description	h	The one- or two-digit hour in 12-hour format.	hh	The two-digit hour in 12-hour format. Single-digit values are preceded by a zero.	H	The one- or two-digit hour in 24-hour format.	HH	The two-digit hour in 24-hour format. Single-digit values are preceded by a zero.	m	The one- or two-digit minute.	mm	The two-digit minute. Single-digit values are preceded by a zero.	t	The one-letter AM/PM abbreviation (that is, AM is displayed as "A").	tt	The two-letter AM/PM abbreviation (that is, AM is displayed as "AM").
Element	Description																			
h	The one- or two-digit hour in 12-hour format.																			
hh	The two-digit hour in 12-hour format. Single-digit values are preceded by a zero.																			
H	The one- or two-digit hour in 24-hour format.																			
HH	The two-digit hour in 24-hour format. Single-digit values are preceded by a zero.																			
m	The one- or two-digit minute.																			
mm	The two-digit minute. Single-digit values are preceded by a zero.																			
t	The one-letter AM/PM abbreviation (that is, AM is displayed as "A").																			
tt	The two-letter AM/PM abbreviation (that is, AM is displayed as "AM").																			
HEIGHT																				
	nnn	Specifies the vertical size of the control in pixels.																		
HINT																				
	HINT	Contains the text string that can appear when the user moves the mouse over the control.																		
LEFT																				
	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.																		
READONLY																				
	FALSE	Determines whether the user can change the text of the edit control.																		
	TRUE	Determines whether the user can change the text of the edit control.																		
SHOWHINT																				
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.																		
	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.																		
TABORDER																				
	nnn	Indicates the position of the control in its parent's tab order.																		
TABSTOP																				
	TRUE	Determines if the user can tab to a control.																		
	FALSE	Determines if the user can tab to a control.																		
TOP																				
	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.																		
VISIBLE																				
	FALSE	Determines whether the component appears on screen.																		
	TRUE	Determines whether the component appears on screen.																		
WIDTH																				
	nnn	Specifies the horizontal size of the control or form in pixels.																		

Control	Property	Value

'VIEW->OPTIONSVIEW->FOCUSRECT'		
TRUE	Specifies to display the focus rectangle.	
FALSE	Specifies to display the focus rectangle.	
'VIEW->OPTIONSVIEW->FOOTER'		
TRUE	Specifies whether the grid footer is displayed.	
FALSE	Specifies whether the grid footer is displayed.	
'VIEW->OPTIONSVIEW->HEADERAUTOHEIGHT'		
TRUE	Specifies whether the height of band rows is automatically adjusted to completely display column header captions within the control.	
FALSE	Specifies whether the height of band rows is automatically adjusted to completely display column header captions within the control.	
'VIEW->OPTIONSVIEW->HEADERS'		
TRUE	Specifies whether the header is displayed.	
FALSE	Specifies whether the header is displayed.	
'VIEW->OPTIONSVIEW->INDICATOR'		
TRUE	Specifies whether a small pointer appears in the first column, to indicate which row is current.	
FALSE	Specifies whether a small pointer appears in the first column, to indicate which row is current.	
'VIEW->DATACONTROLLER->OPTIONS'		
+CaseInsensitive	Specifies the grid values are case insensitive for sorting and filtering.	
-CaseInsensitive	Specifies the grid values are not case insensitive for sorting and filtering.	
EXPANDALLAFTERLOAD		
TRUE	With grouped fields, specifies the masters will be expanded when the form is loaded.	
FALSE	With grouped fields, specifies the masters will be expanded when the form is loaded.	
'VIEW->FILTERROW->VISIBLE'		
TRUE	Specifies whether to display the row filter within the grid.	
FALSE	Specifies whether to display the row filter within the grid.	
'VIEW->FINDPANEL->DISPLAYMODE'		
Never	Specifies whether to display the find panel to search data.	
Always	Specifies whether to display the find panel to search data.	
'VIEW->NAVIGATOR->VISIBLE'		
TRUE	Specifies whether to display a controller to navigate through visible rows in the order that they are displayed on screen.	
FALSE	Specifies whether to display a controller to navigate through visible rows in the order that they are displayed on screen.

DB Tree Grid

VIEW->NAVIGATOR->INFO PANEL->VISIBLE'

TRUE

Specifies whether to display the record number and total record count for the current dataset.

FALSE

Specifies whether to display the record number and total record count for the current dataset.

VIEW->FILTERROW->APPLYCHANGES'

OnCellExit

Specifies the row filter is applied on the cell exit.

Immediately

Specifies the row filter is applied immediately.

Delayed

Specifies the row filter is applied after a specified delay.

VIEW->FILTERROW->APPLYINPUTDELAY'

nnn

Specifies the delay (in milliseconds) before a search is initiated after an end-user has stopped typing text in the row filter.

VIEW->FILTERROW->INFOTEXT'

Value

Specifies the display caption for the row filter.

VIEW->FINDPANEL->APPLYINPUTDELAY'

nnn

Specifies the delay (in milliseconds) before a search is initiated after an end-user has stopped typing text in the Find box.

VIEW->FINDPANEL->POSITION'

Top

Specifies the Find Panel's display position.

Bottom

Specifies the Find Panel's display position.

Database Controls

DB Tree Grid

'VIEW->FINDPANEL->USEEXTENDEDSTYNTAX'

TRUE	<p>Specifies if end-users can include multiple conditions in search strings using the extended syntax.</p> <p>The Extended Syntax setting allows end-users to apply multiple conditions for search strings. Words separated by the space character are treated as individual conditions combined by the OR logical operator. The grid shows records that match at least one of these conditions. To search for a string containing a space character, this string must be enclosed in quotation marks.</p> <p>The following specifiers and wildcards allow users to narrow search results:</p> <p>The "+" specifier. Preceding a condition with this specifier causes the grid to display only records that match this condition. The "+" specifier implements the logical AND operator. There should be no space character between the "+" sign and the condition.</p> <p>The "-" specifier. Preceding a condition with "-" excludes records that match this condition from search results. There should be no space between the "-" sign and the condition.</p> <p>The percent ("%") wildcard. This wildcard substitutes any number of characters in a condition.</p> <p>The underscore ("_") wildcard. This wildcard represents any single character in a condition.</p> <p>For instance, applying the 'mercedes dodge +systems +ame -roadster -sport' search string makes the grid display only records that include 'mercedes' or 'dodge' with 'systems' and 'ame' in any cell, and do not include either 'roadster' or 'sport'.</p> <p>The order of conditions is irrelevant for search results – it only affects how search strings are highlighted within each record cell. So the 'mercedes +systems -roadster -sport +ame dodge' search string is equivalent to the one mentioned above.</p>

+Bold Specifies the font style for the major scale unit separator element of the Task Tracker using the "Gantt" view type.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '+Bold'
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '+Italic'
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '-Underline'
```

-Italic Specifies the font style for the major scale unit separator element of the Task Tracker using the "Gantt" view type.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '+Bold'
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '+Italic'
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '-Underline'
```

+Underline Specifies the font style for the major scale unit separator element of the Task Tracker using the "Gantt" view type.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '+Bold'
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '+Italic'
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '-Underline'
```

-Underline Specifies the font style for the major scale unit separator element of the Task Tracker using the "Gantt" view type.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '+Bold'
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '+Italic'
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '-Underline'
```

+StrikeOut Specifies the font style for the major scale unit separator element of the Task Tracker using the "Gantt" view type.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBTaskTracker1
'VIEWGANTTSTYLEMAJORSIZEUNITSEPARATOR->TEXTSTYLE' '+Bold'
PROPERTY DBTaskTracker1
```

VIEWWEEKS->GROUPINGKIND'

Default

If more than one resource is set, the grouping behavior is the same as that specified with the "By Resource" setting. If one or no resource is set, the grouping behavior is the same as that specified with the "None" setting.

None

Specifies the schedules are not grouped. Tasks are displayed altogether in every day in chronological order.

ByDate

Specifies the schedules are grouped by dates and resources.

ByResource

Specifies the schedules are grouped by resources.

VIEWWEEKS->CANSHOW'

TRUE

Specifies whether the specified time view can be displayed in the scheduling area.

FALSE

Specifies whether the specified time view can be displayed in the scheduling area.

VIEWWEEKS->COMPRESSWEEKEND'

TRUE

Specifies whether the days in a weekend should be displayed together in one day cell.

FALSE

Specifies whether the days in a weekend should be displayed together in one day cell.

VIEWWEEKS->HIDEWEEKEND'

TRUE

Specifies whether the weekend days are visible.

FALSE

Specifies whether the weekend days are visible.

VIEWWEEKS->SHOWENDTIME'

TRUE

Specifies whether the task end time is displayed.

FALSE

Specifies whether the task end time is displayed.

VIEWWEEKS->SHOWTIMEASCLOCK'

TRUE

Specifies whether the task time is displayed as a miniature clock or as digits.

FALSE

Specifies whether the task time is displayed as a miniature clock or as digits.

VIEWYEAR->MAXSELECTEDDAYSCOUNT'

nnn

Specifies how many days can be selected in the year view. If set to 0, then all the days in a year can be selected at once.

TARGETCONTROL->VIEWYEAR->SCALE'

3

Specifies 3 months to be displayed within the control.

6

Specifies 6 months to be displayed within the control.

12

Specifies 12 months (default) to be displayed within the control.

VIEWYEAR->ALLDAYEVENTSONLY'

TRUE

Specifies if only all-day tasks are shown in the scheduling area (or tasks whose duration exceeds 24 hours).

FALSE

Specifies if only all-day tasks are shown in the scheduling area (or tasks whose duration exceeds 24 hours).

	FALSE	Specifies to use the task color within for Task Tree, for the corresponding task.
'VIEWGANTT->EVENTDETAILINFO'	TRUE	Specifies whether a rectangle of the scheduled task will occupy only the first row of the time scale's column, or the column's space necessary for displaying task's details.
	FALSE	Specifies whether a rectangle of the scheduled task will occupy only the first row of the time scale's column, or the column's space necessary for displaying task's details.
'VIEWGANTT->SHOWEXPANDBUTTONS'	TRUE	Specifies whether task expand buttons (+/-) are to be displayed.
	FALSE	Specifies whether task expand buttons (+/-) are to be displayed.
'VIEWGANTT->SHOWMOREEVENTSBUTTON'	TRUE	Specifies whether the "more events" button is to be displayed.
	FALSE	Specifies whether the "more events" button is to be displayed.
'VIEWGANTT->SHOWRESOURCESCROLLBAR'	TRUE	Specifies whether a scroll bar is to be displayed within each resource.
	FALSE	Specifies whether a scroll bar is to be displayed within each resource.
'VIEWGANTT->SHOWTIMEASCLOCK'	TRUE	Specifies whether to display the task's time as a miniature clock.
	FALSE	Specifies whether to display the task's time as a miniature clock.
'VIEWGANTT->SHOWTOTALPROGRESSLINE'	TRUE	Specifies whether a total progress line is to be displayed.
	FALSE	Specifies whether a total progress line is to be displayed.
'VIEWGANTT->SNAPEVENTSTOTIMESLOTS'	TRUE	Specifies whether a task's rectangle is to be resized, so it will entirely occupy time blocks.
	FALSE	Specifies whether a task's rectangle is to be resized, so it will entirely occupy time blocks.
'VIEWGANTT->WORKDAYONLY'	TRUE	Specifies whether only working days are displayed in the scheduling area.
	FALSE	Specifies whether only working days are displayed in the scheduling area.
'VIEWGANTT->WORKTIMEONLY'	TRUE	Specifies whether only working hours are displayed in the scheduling area.
	FALSE	Specifies whether only working hours are displayed in the scheduling area.

'DATENAVIGATOR->HOLIDAYCOLOR'	Value	Specifies a color used to paint holiday dates in the navigator.
'DATENAVIGATOR->VISIBLE'	TRUE	Specifies if the Date Navigator is displayed.
	FALSE	Specifies if the Date Navigator is displayed.
'DATENAVIGATOR->SHOWDATESCONTAININGEVENTSINBOLD'	TRUE	Specifies whether days containing tasks are shown in bold in the navigator.
	FALSE	Specifies whether days containing tasks are shown in bold in the navigator.
'DATENAVIGATOR->SHOWDATESCONTAININGHOLIDAYSINCOLOR'	TRUE	Specifies whether holiday dates are to be highlighted in the navigator.
	FALSE	Specifies whether holiday dates are to be highlighted in the navigator.
'DATENAVIGATOR->SHOWWEEKNUMBERS'	TRUE	Specifies whether week numbers are displayed in the navigator.
	FALSE	Specifies whether week numbers are displayed in the navigator.
'VIEWGANTT->TREEBROWSER->VISIBLE'	TRUE	Specifies to display the task tree, which visualizes task hierarchies in a tree-like manner (Gantt view types only).
	FALSE	Specifies to display the task tree, which visualizes task hierarchies in a tree-like manner (Gantt view types only).
TREEGRIDLINES	Vert	Specifies grid lines appear vertically.
	Horz	Specifies grid lines appear horizontally.
	None	Specifies grid lines do not appear.
	Both	Specifies grid lines appear in both directions.
TREEGRIDLINECOLOR	Value	Specifies the line color for tree grid lines.
TREELINESTYLE	None	Specifies the tree lines are not displayed in the tree grid.
	Dot	Specifies the display for the tree grid lines as dotted lines.
	Solid	Specifies the display for the tree grid lines as solid lines.
TREELINECOLOR	Value	Specifies the color for tree lines.
TREECOLUMNAUTOWIDTH	TRUE	Specifies whether or not the width of the column is automatically adjusted to display the entire content.
	FALSE	Specifies whether or not the width of the column is automatically adjusted to display the entire content.

Control	Property	Value
---------	----------	-------

Database Controls

DB Task Tracker

TREEINDICATOR	TRUE	Specifies whether a small pointer appears in the first column, to indicate which row is current.
	FALSE	Specifies whether a small pointer appears in the first column, to indicate which row is current.
TREESHOWROOT	TRUE	Specifies the visibility of tree lines and expand buttons at the root level of the tree.
	FALSE	Specifies the visibility of tree lines and expand buttons at the root level of the tree.
'OPTIONSVIEW->DAYBORDERCOLOR'	Value	Specifies the border color for calendar days, when the View Type is set to Day, Week, Weeks, or Year.
'OPTIONSVIEW->EVENTBORDERCOLOR'	Value	Specifies the border color for the task rectangle.
'OPTIONSVIEW->EVENTHEIGHT'	nnn	Specifies the height of the task rectangle. The rectangle's minimum height is limited by the current size of the font used for the task's subject text. If the rectangle's height is set to less than the current font size then the scheduler will be forced to increase the rectangle's height to correctly display the task caption. If the Task Height value is 0, the height of the task rectangle is calculated automatically. The Task Height default value is 0. Task icons will always be clipped if their height is greater than the task rectangle's height.
'OPTIONSVIEW->GROUPINGKIND'	Default	If more than one resource is set, the grouping behavior is the same as that specified with the By Resource setting. If one or no resource is set, the grouping behavior is the same as that specified with the None setting.
	None	Specifies schedules are not grouped. Tasks are displayed altogether in every day in chronological order.
	ByDate	Specifies schedules are grouped by dates and resources.
	ByResource	Specifies schedules are grouped by resources.
'OPTIONSVIEW->GROUPSEPARATORWIDTH'	nnn	Specifies the group separator's width in pixels. The group separator is a bar that visually divides groups of schedules.
'OPTIONSVIEW->HORZSPLITTERWIDTH'	nnn	Specifies the width of the horizontal splitter in pixels. The horizontal splitter is the horizontal bar between the Date Navigator and the Control Box.
'OPTIONSVIEW->VERTSPLITTERWIDTH'	nnn	Specifies the width of the vertical splitter in pixels. The vertical splitter is a vertical bar between the scheduling area on one side and the Date Navigator and Control Box on the other.

Control	Property	Value
---------	----------	-------

Database Controls

DB Task Tracker

'OPTIONSVIEW->VIEWPOSITION'

- Right

Specifies the position of the scheduling area with respect to the Date Navigator and Control Box panes.
- Left

Specifies the position of the scheduling area with respect to the Date Navigator and Control Box panes.
- Top

Specifies the position of the scheduling area with respect to the Date Navigator and Control Box panes.
- Bottom

Specifies the position of the scheduling area with respect to the Date Navigator and Control Box panes.

'OPTIONSVIEW->WORKSTART'

- Value

Specifies the beginning of the work hours, displayed in the scheduling area.

'OPTIONSVIEW->WORKFINISH'

- Value

Specifies the end of the work hours, displayed in the scheduling area.

'OPTIONSVIEW->SHOWHINTS'

- TRUE

Specifies whether the hint window is displayed when an end-user positions the mouse pointer over a task rectangle.
- FALSE

Specifies whether the hint window is displayed when an end-user positions the mouse pointer over a task rectangle.

'OPTIONSVIEW->SHOWNAVIGATIONBUTTONS'

- TRUE

Specifies whether task navigation buttons are displayed. The task navigation buttons are displayed if no tasks are scheduled on the date that is currently shown. These buttons are used to bring the nearest task (scheduled on another date) into view. If more space must be provided in the content area, the buttons can be hidden.
- FALSE

Specifies whether task navigation buttons are displayed. The task navigation buttons are displayed if no tasks are scheduled on the date that is currently shown. These buttons are used to bring the nearest task (scheduled on another date) into view. If more space must be provided in the content area, the buttons can be hidden.

'OPTIONSVIEW->WORKDAYS'

- +Sunday

Specifies Sunday is a day that can contain work hours.
- Sunday

Specifies Sunday is a day that cannot contain work hours.
- +Monday

Specifies Monday is a day that can contain work hours.
- Monday

Specifies Monday is a day that cannot contain work hours.
- +Tuesday

Specifies Tuesday is a day that can contain work hours.
- Tuesday

Specifies Tuesday is a day that cannot contain work hours.
- +Wednesday

Specifies Wednesday is a day that can contain work hours.
- Wednesday

Specifies Wednesday is a day that cannot contain work hours.
- +Thursday

Specifies Thursday is a day that can contain work hours.
- Thursday

Specifies Thursday is a day that cannot contain work hours.
- +Friday

Specifies Friday is a day that can contain work hours.
- Friday

Specifies Friday is a day that cannot contain work hours.
- +Saturday

Specifies Saturday is a day that can contain work hours.
- Saturday

Specifies Saturday is a day that cannot contain work hours.

Control	Property	Value
---------	----------	-------

Database Controls

DB Task Tracker

ATTACHCONTROL

Value

Attaches the form control with the specified Component ID to the DB Task Tracker's Control Box. It is recommended that the control to attach is a container-type object; like an Enhanced Panel or an Enhanced Group Box.

PROPERTY TaskTracker1 ATTACHCONTROL EnhPanelCompID

SELECTNUMDAYS

nn

Specifies to select a number of days starting from the currently selected date.

PROPERTY TaskTracker1 SelectNumDays 14

TASKID

VarName

Captures what task was clicked/double clicked. The parameter is specific to the GETPROPERTY command and can only be used in the "On Click" and "On Double Click" EEPs.

The parameter is in addition to the Selected_Tasks property. The difference is that Selected_Tasks can contain multiple tasks (all of the selected tasks) while TaskID is the task where the mouse click occurred.

GETPROPERTY TaskTracker1 TaskID vTaskID

DROPPEDTODATETIME

VarName

Captures the date/time value for where a task was dropped in the calendar. The parameter is specific to the "On Drag Drop" EEP. Similar to DroppedToDateTimeStr, DroppedToDateTime returns the "full" date and time value regardless if the date or time portion is not defined.

GETPROPERTY TaskTracker1 DroppedToDateTime vDropTaskDateTime

DROPPEDTODATETIMESTR

VarName

Captures the date, time, or date/time value for where a task was dropped in the calendar. The parameter is specific to the "On Drag Drop" EEP.

DroppedToDateTimeStr will return only the date portion if the time portion is not defined (e.g. 07/27/2018), or only the time value if the date portion is not defined (e.g. 12:34:56), or both date and time if both portions are defined (e.g. 07/27/2018 12:34:56).

Similar to DroppedToDateTimeStr is DroppedToDateTime, however the latter returns the "full" date and time value regardless if the date or time portion is not defined.

GETPROPERTY TaskTracker1 DroppedToDateTimeStr vDropTaskDateTime

DRAGGEDTASKID

VarName

Captures the ID of the dragged task. The parameter is specific to the "On Start Drag" EEP.

The drag process/logic must assign the value to some variable for future use (e.g. the "On Drag Drop" EEP when the task is dropped in another control).

GETPROPERTY TaskTracker1 DraggedTaskID vDragTaskID

Form Controls and Properties		Database Controls
Control	Property	Value
<div>Database Controls</div> <div>DB Task Tracker</div>		
MONTHBASEDNAVIGATION	TRUE	Specifies date navigation using the Date Navigator will always go to the first day of the active month. In addition to this, clicking on a specific date will reset the calendar selection to the full month.
	FALSE	Specifies date navigation using the Date Navigator will always go to the first day of the active month. In addition to this, clicking on a specific date will reset the calendar selection to the full month.
SELECTEDMONTH	Value	Returns the first day of the active month.
SELECT_TASK	TaskID	Specifies to select/highlight a task item. Example: PROPERTY DBTaskTracker1 SELECT_TASK .vTaskID
'VIEWDAY->ACTIVE'	TRUE	Specifies the "day view" in the scheduling area, which enables end-users to schedule and view tasks by day.
'VIEWWEEK->ACTIVE'	TRUE	Specifies the week view in the scheduling area, which enables an end-user to schedule and view task by week.
'VIEWWEEKS->ACTIVE'	TRUE	Specifies the weeks view in the scheduling area, which enables an end-user to schedule and view task by weeks.
'VIEWYEAR->ACTIVE'	TRUE	Specifies the year view in the scheduling area, which enables end-users to schedule and view tasks by year.
'VIEWGANTT->ACTIVE'	TRUE	Specifies a Gantt view, where tasks are displayed as horizontal bars along the time axis.
'VIEWTIMEGRID->ACTIVE'	TRUE	Specifies the time grid view in the scheduling area, where tasks are chronologically ordered from left to right along a timescale.

Control	Property	Value
---------	----------	-------

Database Controls

DB Task Tracker

ADD_COLOR

'LabelCaption|LabelColor' Adds a custom "Label" color and description to the DB Task Tracker. The color portion can be a named color, an integer, or an RGB value.

Example:

```
PROPERTY TASK_TRACKER ADD_COLOR 'My Status|RED'
```

The ADD_COLOR command should be executed at the start of the application as the custom colors/descriptions are not persistent between R:BASE sessions. The saved values in your database table are of course persisted.

Predefined Labels:

- Color - Description
- 8689404 - Important
- 14982788 - Business
- 6610596 - Personal
- 13952740 - Vacation
- 7649020 - Must Attend
- 16051844 - Travel Required
- 8703700 - Needs Preparation
- 16033476 - Birthday
- 12897956 - Anniversary
- 7661308 - Phone Call

COLOR_DESC[n]

Value Changes the predefined description of a label, where n is a zero-based index as displayed in the drop down.

Example:

```
PROPERTY TaskTracker COLOR_DESC[n] 'My Description'
```

Predefined Labels:

- Index - Color - Description
- 0 - 8689404 - Important
- 1 - 14982788 - Business
- 2 - 6610596 - Personal
- 3 - 13952740 - Vacation
- 4 - 7649020 - Must Attend
- 5 - 16051844 - Travel Required
- 6 - 8703700 - Needs Preparation
- 7 - 16033476 - Birthday
- 8 - 12897956 - Anniversary
- 9 - 7661308 - Phone Call

Control	Property	Value
---------	----------	-------

Database Controls

DB Task Tracker

COLOR_VALUE[n]

Value Changes the predefined color of a label, where n is a zero-based index as displayed in the drop down. The color can be a named color, an integer, or an RGB value.

Example:

PROPERTY TaskTracker COLOR_VALUE[n] 'BLUE'

Predefined Labels:

Index	-	Color	-	Description
0	-	8689404	-	Important
1	-	14982788	-	Business
2	-	6610596	-	Personal
3	-	13952740	-	Vacation
4	-	7649020	-	Must Attend
5	-	16051844	-	Travel Required
6	-	8703700	-	Needs Preparation
7	-	16033476	-	Birthday
8	-	12897956	-	Anniversary
9	-	7661308	-	Phone Call

NAVIGATIONMETHOD

Default Specifies navigation can be any number of days based upon the dragged mouse selection in the Date Navigator.

Month-Based Secifies use of the Date Navigator will always go to the first week of the active month, and clicking on a specific date will reset the calendar selection to the full month.

Week-Based Specifies use of the Date Navigator will always cover a full week.

GOTOWEEK

Value Specifies the whole week of the date provided is selected in the DB Task Tracker.

PROPERTY TaskTracker1 GOTOWEEK '09/19/2020'

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

Form Controls and Properties		Database Controls

DB Date And Time Edit

'STYLE->LOOKANDFEEL->KIND'

Value

Specifies the look of the control and how the control visually responds on user actions (focus, mouse move, clicks etc.). Basically Kind determines how the control is painted.

Kind options include:

- Flat
- Standard
- UltraFlat
- Office11

'STYLE->HOTTRACK'

TRUE

Specifies whether the control is highlighted when the mouse is positioned over the control.

FALSE

Specifies whether the control is highlighted when the mouse is positioned over the control.

'STYLE->TRANSPARENTBORDER'

TRUE

Specifies whether the control border is transparent.

FALSE

Specifies whether the control border is transparent.

'STYLE->SHADOW'

TRUE

Specifies whether to display a shadow for the control.

FALSE

Specifies whether to display a shadow for the control.

'STYLE->EDGES'

+Left Specifies to display the left side of the border.

The following displays the left, top, and right sides of the border, and hides the bottom border:

```
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Right'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Top'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Left'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '-Bottom'
```

-Left Specifies to hide the left side of the border.

The following displays the left, top, and right sides of the border, and hides the bottom border:

```
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Right'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Top'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Left'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '-Bottom'
```

+Top Specifies to display the top side of the border.

The following displays the left, top, and right sides of the border, and hides the bottom border:

```
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Right'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Top'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Left'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '-Bottom'
```

-Top Specifies to hide the top side of the border.

The following displays the left, top, and right sides of the border, and hides the bottom border:

```
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Right'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Top'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Left'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '-Bottom'
```

+Bottom Specifies to display the bottom side of the border.

The following displays the left, top, and right sides of the border, and hides the bottom border:

```
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Right'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Top'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Left'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '-Bottom'
```

-Bottom Specifies to hide the bottom side of the border.

The following displays the left, top, and right sides of the border, and hides the bottom border:

```
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Right'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Top'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Left'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '-Bottom'
```

+Right Specifies to display the right side of the border.

The following displays the left, top, and right sides of the border, and hides the bottom border:

```
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Right'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Top'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '+Left'  
PROPERTY DBDTEdit1 'STYLE->EDGES' '-Bottom'
```

Center	Specifies to horizontally center justify the text within the control.	
'PROPERTIES->ALIGNMENT->VERT'		
TopJustify	Specifies to vertically top justify the text within the control.	
BottomJustify	Specifies to vertically bottom justify the text within the control.	
VCenter	Specifies to vertically center justify the text within the control.	
'STYLE->BUTTONTRANSPARENCY'		
None	The buttons are always displayed in a non-transparent fashion.	
Inactive	A button is drawn when the editor has focus or when the mouse cursor is positioned over the button. Otherwise, the button is transparent.	
Always	A button is always transparent.	
HideInactive	A button is drawn only when the editor has focus. Otherwise, the button is invisible.	
HideUnselected	A button is drawn when the editor has focus or when the mouse cursor is positioned over the editor region. Otherwise, the button is invisible.	
'STYLE->POPUPBORDERSTYLE'		
Default	Specifies the popup borders are drawn in the manner in which editor borders are currently painted, which is determined by the Border Style and Hot Track properties.	
Single	Specifies the popup borders are thin.	
Frame3D	Specifies the popup borders are three-dimensional.	
Flat	Specifies the popup borders are flat with a slight three-dimensional effect.

ROTATED	TRUE	Rotates the tree structure layout. Use this property to flip the component's display 90 degrees. If the property is set to True, nodes of the same level are positioned vertically and parents are on the left in relation to child nodes. Set Rotated to False to return the component to its normal state with a horizontal layout of child nodes.
	FALSE	Rotates the tree structure layout. Use this property to flip the component's display 90 degrees. If the property is set to True, nodes of the same level are positioned vertically and parents are on the left in relation to child nodes. Set Rotated to False to return the component to its normal state with a horizontal layout of child nodes.
ZOOM	TRUE	Specifies the component's zooming mode. Use Zoom to display the entire tree structure within the component window at runtime. When checked, the component diminishes to the window size (when necessary) and never displays scroll bars. In this mode, a user cannot edit a node's text.
	FALSE	Specifies the component's zooming mode. Use Zoom to display the entire tree structure within the component window at runtime. When checked, the component diminishes to the window size (when necessary) and never displays scroll bars. In this mode, a user cannot edit a node's text.
PARENTFONT	FALSE	Specifies to match the font of the parent control.
	TRUE	Specifies to match the font of the parent control.
ENABLED	FALSE	Specifies the control is accessibility to end users.
	TRUE	Specifies the control is accessibility to end users.
SHOWHINT	FALSE	Displays the defined hint.
	TRUE	Displays the defined hint.
COLOR	Value	Specifies the background color for the control.
IMAGEWIDTH	nnn	Specifies width for images.
IMAGEHEIGHT	nnn	Specifies the height for images.
DEFAULTNODEWIDTH	nnn	Specifies the default width for tree nodes.
DEFAULTNODEHEIGHT	nnn	Specifies the default height for tree nodes.
'FONT->COLOR'	Value	Specifies the base font color of the text.
'FONT->NAME'	Value	Specifies the base font typeface for the text.

PROPERTY DBOrgChart1 OPTIONS '+Animate'  
PROPERTY DBOrgChart1 OPTIONS '+ImageFiltering'  
PROPERTY DBOrgChart1 OPTIONS '-Edit'  
PROPERTY DBOrgChart1 OPTIONS '-CanDrag'  
PROPERTY DBOrgChart1 OPTIONS '-InsDel'
```

+InsDel Specifies nodes can be inserted or deleted using the [Insert], [Ctrl+Insert], and [Delete] keys.

The following applies the "Select", "Focus", "Buttons", "Double Click", "Animate", and "Image Filtering" options , and removes the "Edit", "Can Drag", "Insert/Delete" options:

```
PROPERTY DBOrgChart1 OPTIONS '+Select'  
PROPERTY DBOrgChart1 OPTIONS '+Focus'  
PROPERTY DBOrgChart1 OPTIONS '+Buttons'  
PROPERTY DBOrgChart1 OPTIONS '+DbIcClick'  
PROPERTY DBOrgChart1 OPTIONS '+Animate'  
PROPERTY DBOrgChart1 OPTIONS '+ImageFiltering'  
PROPERTY DBOrgChart1 OPTIONS '-Edit'  
PROPERTY DBOrgChart1 OPTIONS '-CanDrag'  
PROPERTY DBOrgChart1 OPTIONS '-InsDel'
```

-InsDel Specifies nodes cannot be inserted or deleted using the [Insert], [Ctrl+Insert], and [Delete] keys.

The following applies the "Select", "Focus", "Buttons", "Double Click", "Animate", and "Image Filtering" options , and removes the "Edit", "Can Drag", "Insert/Delete" options:

```
PROPERTY DBOrgChart1 OPTIONS '+Select'  
PROPERTY DBOrgChart1 OPTIONS '+Focus'  
PROPERTY DBOrgChart1 OPTIONS '+Buttons'  
PROPERTY DBOrgChart1 OPTIONS '+DbIcClick'  
PROPERTY DBOrgChart1 OPTIONS '+Animate'  
PROPERTY DBOrgChart1 OPTIONS '+ImageFiltering'  
PROPERTY DBOrgChart1 OPTIONS '-Edit'  
PROPERTY DBOrgChart1 OPTIONS '-CanDrag'  
PROPERTY DBOrgChart1 OPTIONS '-InsDel'
```

+Rect3D Specifies rectangle nodes are displayed with the three-dimensional effect.

The following applies the "Select", "Focus", "Buttons", "Double Click", "Animate", and "Image Filtering" options , and removes the "Edit", "Can Drag", "Insert/Delete" options:

```
PROPERTY DBOrgChart1 OPTIONS '+Select'  
PROPERTY DBOrgChart1 OPTIONS '+Focus'  
PROPERTY DBOrgChart1 OPTIONS '+Buttons'  
PROPERTY DBOrgChart1 OPTIONS '+DbIcClick'  
PROPERTY DBOrgChart1 OPTIONS '+Animate'  
PROPERTY DBOrgChart1 OPTIONS '+ImageFiltering'  
PROPERTY DBOrgChart1 OPTIONS '-Edit'  
PROPERTY DBOrgChart1 OPTIONS '-CanDrag'  
PROPERTY DBOrgChart1 OPTIONS '-InsDel'
```

-Rect3D Specifies rectangle nodes are not displayed with the three-dimensional effect.

The following applies the "Select", "Focus", "Buttons", "Double Click", "Animate", and "Image Filtering" options , and removes the "Edit", "Can Drag", "Insert/Delete" options:

```
PROPERTY DBOrgChart1 OPTIONS '+Select'
```

STYLE->LOOKANDFEEL->KIND'

Value

Specifies the look of the control and how the control visually responds on user actions (focus, mouse move, clicks etc.). Basically Kind determines how the control is painted.

Kind options include:

· Flat

· Standard

· UltraFlat

· Office11

BORDERSTYLE'

None

No border is painted around the control.

Default

The border style is specified by the look and feel applied to the control (see the Look and Feel properties).

SCALES[n]->VISIBLE'

TRUE

Specifies if the scale is displayed. The value of "n" is the scale number.

FALSE

Specifies if the scale is displayed. The value of "n" is the scale number.

SCALES[n]->STYLENAME'

Value

Specifies the modern appearance style for the control. Option include:

· AfricaSunset

· Classic

· CleanWhite

· DarkNight

· DeepFire

· Disco

· Future

· IceColdZone

· iStyle

· Mechanical

· Military

· Retro

· Smart

· SportCar

· White

· YellowSubmarine

SCALES[n]->OPTIONSLAYOUT->CENTERPOSITIONTYPE'

Factor

Enables relative scale positioning within the control. The scale's "Center Position Factor X" and "Center Position Factor Y" property values are used to calculate the scale's position within the parent object's area.

Pixels

Enables absolute scale positioning within the control. The "Center Position Factor X" and "Center Position Factor Y" property values specify the absolute distance (in pixels) between the left and top borders of the parent object's area and the scale's center, respectively.

SCALES[n]->OPTIONSLAYOUT->CENTERPOSITIONX'

nnn

Specifies the absolute horizontal position of the scale's center within the control border.

SCALES[n]->OPTIONSLAYOUT->CENTERPOSITIONY'

nnn

Specifies the absolute vertical position of the scale's center within the control border.

SCALES[n]->OPTIONSLAYOUT->CENTERPOSITIONFACTORX'

n.nn

Specifies the relative horizontal position of the scale's center within the control border.

Control	Property	Value

PROPERTY Gauge1 'SCALES[1]->OPTIONSVIEW->FONT->STYLE' '+Italic'
PROPERTY Gauge1 'SCALES[1]->OPTIONSVIEW->FONT->STYLE' '-Underline'

'SCALES[n]->OPTIONSVIEW->DIGITCOUNT'

nnn Specifies the maximum length (in characters) of the digital scale's value string display area.

Control	Property	Value
---------	----------	-------

Database Controls

DB Gauge

'SCALES[n]->OPTIONSVIEW->DISPLAYMODE'		
FourteenSegment		Each character display block (section) of the digital scale consists of fourteen bar-shaped segments, and provides a broad selection of displayed characters. In this mode, a digital scale displays both the upper- and lowercase characters identically.
SevenSegment		Each character display block (section) of the digital scale consists of seven bar-shaped segments. In this case, the scale is unable to display a custom text string, since this mode provides a very limited selection of displayed characters. If the Value string contains non-supported characters, the scale does not display them.
'SCALES[n]->OPTIONSVIEW->SEGMENTCOLOROFF'		
Value		Specifies the color of the "offline" segments of a digital scale's character display block (section).
'SCALES[n]->OPTIONSVIEW->SEGMENTCOLORON'		
Value		Specifies the color of the "online" segments of a digital scale's character display block (section).
'SCALES[n]->OPTIONSVIEW->ALIGNELEMENTS'		
LeftJustify		Specifies how the tick marks and labels are aligned on the linear scale.
RightJustify		Specifies how the tick marks and labels are aligned on the linear scale.
'SCALES[n]->OPTIONSVIEW->LABELORIENTATION'		
LeftToRight		Specifies the tick mark and label position on the linear scale layout.
TopToBottom		Specifies the tick mark and label position on the linear scale layout.
BottomToTop		Specifies the tick mark and label position on the linear scale layout.
'SCALES[n]->OPTIONSVIEW->ROTATIONANGLE'		
0		Specifies the linear scale's direction.
Plus90		Specifies the linear scale's direction.
Minus90		Specifies the linear scale's direction.
180		Specifies the linear scale's direction.
'SCALES[n]->OPTIONSVIEW->SHOWLEVELBAR'		
TRUE		Specifies whether the level bar is displayed within a linear scale.
FALSE		Specifies whether the level bar is displayed within a linear scale.
'SCALES[n]->RANGES[n]->COLOR'		
Value		Specifies the color for the range, for circular scales.
'SCALES[n]->RANGES[n]->VALUESTART'		
n.nn		Specifies the start position of the range bar, for circular scales.
'SCALES[n]->RANGES[n]->VALUEEND'		
n.nn		Specifies the end position of the range bar, for circular scales.
'SCALES[n]->RANGES[n]->RADIUSFACTOR'		
n.nn		Specifies the relative radius of the range mark, for circular scales.
'SCALES[n]->RANGES[n]->CENTERPOSITIONFACTOR'		
n.nn		Specifies the relative center of the range mark, for circular scales.

Control	Property	Value

TRUE	Specifies whether an expanded node located under the mouse pointer is automatically collapsed during drag-and-drop operations.	
FALSE	Specifies whether an expanded node located under the mouse pointer is automatically collapsed during drag-and-drop operations.	
'OPTIONSBEHAVIOR->DRAGDROPTXT'		
TRUE	Specifies whether an image of the currently dragged object is being layered over the control.	
FALSE	Specifies whether an image of the currently dragged object is being layered over the control.	
'OPTIONSBEHAVIOR->DRAGEXPAND'		
TRUE	Specifies whether a collapsed node located under the mouse pointer is automatically expanded during drag-and-drop operations.	
FALSE	Specifies whether a collapsed node located under the mouse pointer is automatically expanded during drag-and-drop operations.	
'OPTIONSBEHAVIOR->DRAGFOCUSING'		
TRUE	Specifies whether a node located under the mouse pointer is automatically focused during drag-and-drop operations.	
FALSE	Specifies whether a node located under the mouse pointer is automatically focused during drag-and-drop operations.	
'OPTIONSBEHAVIOR->EXPANDONDBLCLICK'		
TRUE	Specifies whether double-clicking a node changes its expansion state.	
FALSE	Specifies whether double-clicking a node changes its expansion state.	

Control	Property	Value

DB Tree List

'OPTIONSBEHAVIOR->HOTTRACK'		
TRUE	Specifies whether nodes are hot-tracked when the mouse pointer is located over them.	
FALSE	Specifies whether nodes are hot-tracked when the mouse pointer is located over them.	
'OPTIONSBEHAVIOR->MULTISORT'		
TRUE	Specifies whether nodes can be sorted by multiple columns.	
FALSE	Specifies whether nodes can be sorted by multiple columns.	
'OPTIONSBEHAVIOR->SHOWHOURLASS'		
TRUE	Specifies whether the hourglass cursor is displayed when performing long operations.	
FALSE	Specifies whether the hourglass cursor is displayed when performing long operations.	
'OPTIONSBEHAVIOR->SORTING'		
TRUE	Specifies whether end-users can sort nodes by clicking column headers.	
FALSE	Specifies whether end-users can sort nodes by clicking column headers.	
'OPTIONSSELECTION->CELLSELECT'		
TRUE	Specifies whether individual cells can be selected instead of entire nodes.	
FALSE	Specifies whether individual cells can be selected instead of entire nodes.	
'OPTIONSSELECTION->HIDEFOCUSRECT'		
TRUE	Specifies whether the focus rectangle is displayed around the focused cell when the control loses focus.	
FALSE	Specifies whether the focus rectangle is displayed around the focused cell when the control loses focus.	
'OPTIONSSELECTION->HIDeselection'		
TRUE	Specifies whether the selected cell remains highlighted when the control loses focus.	
FALSE	Specifies whether the selected cell remains highlighted when the control loses focus.	
'OPTIONSSELECTION->INVERTSELECT'		
TRUE	Specifies whether a single cell within the focused node or the whole node is highlighted when focused.	
FALSE	Specifies whether a single cell within the focused node or the whole node is highlighted when focused.	
'OPTIONSSELECTION->MULTISELECT'		
TRUE	Specifies whether multiple cells can be selected by end-users.	
FALSE	Specifies whether multiple cells can be selected by end-users.	
'OPTIONSVIEW->CELLAUTOHEIGHT'		
TRUE	Specifies whether the cell height varies according to the cell's text length.	
FALSE	Specifies whether the cell height varies according to the cell's text length.	
'OPTIONSVIEW->CELLENDELLIPSIS'		
TRUE	Specifies to display an ellipsis when the entire text cannot be displayed within a cell.	
FALSE	Specifies to display an ellipsis when the entire text cannot be displayed within a cell.	

Control	Property	Value

DB Card View

'VIEW->ROWLAYOUT'	
Horizontal	Specifies the orientation of the rows.
Vertical	Specifies the orientation of the rows.
'VIEW->OPTIONSVIEW->CAPTIONSEPARATOR'	
Value	Specifies the character displayed at the end of a card row caption.
'VIEW->OPTIONSVIEW->CAPTIONWIDTH'	
nnn	Specifies the width of row captions.
'VIEW->OPTIONSVIEW->CARDAUTOWIDTH'	
TRUE	Specifies whether the card width is automatically adjusted while resizing the control.
FALSE	Specifies whether the card width is automatically adjusted while resizing the control.
'VIEW->OPTIONSVIEW->CARDBORDERWIDTH'	
nnn	Specifies the width of the card border.
'VIEW->OPTIONSVIEW->CARDEXPANDBUTTONALIGNMENT'	
Left	Specifies the card expand button's horizontal alignment.
Right	Specifies the card expand button's horizontal alignment.
'VIEW->OPTIONSVIEW->CARDINDENT'	
nnn	Specifies the card's indent, in pixels, across the horizontal and vertical axes.
'VIEW->OPTIONSVIEW->CARDWIDTH'	
nnn	Specifies the card width.
'VIEW->OPTIONSVIEW->CATEGORYINDENT'	
nnn	Specifies the size of the category row's children indentation.
'VIEW->OPTIONSVIEW->CATEGORYSEPARATORWIDTH'	
nnn	Specifies the width of the category row separator, in pixels.
'VIEW->OPTIONSVIEW->CATEGORYROWCAPTIONINROWALTERNATECAPTION'	
TRUE	Specifies whether to add the category row's caption at the beginning of children's captions.
FALSE	Specifies whether to add the category row's caption at the beginning of children's captions.
'VIEW->OPTIONSVIEW->CELLAUTOHEIGHT'	
TRUE	Determines whether the height of item cells is automatically changed to display their contents in full.
FALSE	Determines whether the height of item cells is automatically changed to display their contents in full.
'VIEW->OPTIONSVIEW->CELLENDELLIPSIS'	
TRUE	Determines whether to clip cell text with the ellipsis.
FALSE	Determines whether to clip cell text with the ellipsis.
'VIEW->OPTIONSVIEW->CELLTEXTMAXLINECOUNT'	
nnn	Determines the maximum number of lines for cells displayed within the current view.

'VIEW->OPTIONSVIEW->EMPTYROWS'		
	TRUE	Specifies whether empty rows should be displayed.
	FALSE	Specifies whether empty rows should be displayed.
'VIEW->OPTIONSVIEW->FOCUSRECT'		
	TRUE	Specifies to display the focus rectangle.
	FALSE	Specifies to display the focus rectangle.
'VIEW->OPTIONSVIEW->LAYERSEPARATORWIDTH'		
	nnn	Specifies the width of a layer separator in pixels.
'VIEW->OPTIONSVIEW->NAVIGATOROFFSET'		
	nnn	Specifies the distance (in pixels) between the editing control's navigator and the horizontal scroll bar.
'VIEW->OPTIONSVIEW->NODATATODISPLAYINFOTEXT'		
	Value	Specifies a string that is displayed in the grid's client area, if no rows are shown.
'VIEW->OPTIONSVIEW->ROWCAPTIONAUTOHEIGHT'		
	TRUE	Determines whether the caption height of Card View rows is automatically changed in order to entirely display the caption text.
	FALSE	Determines whether the caption height of Card View rows is automatically changed in order to entirely display the caption text.
'VIEW->OPTIONSVIEW->ROWCAPTIONENDELLIPSIS'		
	TRUE	Specifies whether to display an ellipsis when the row caption is clipped.
	FALSE	Specifies whether to display an ellipsis when the row caption is clipped.
'VIEW->OPTIONSVIEW->SCROLLBARS'		
	None	Specifies to display no scroll bars.
	Horizontal	Specifies to display the horizontal scroll bar only.
	Vertical	Specifies to display the vertical scroll bar only.
	Both	Specifies to display both scroll bars.
'VIEW->OPTIONSVIEW->SEPARATORCOLOR'		
	Value	Specifies the color of card group separators.
'VIEW->OPTIONSVIEW->SEPARATORWIDTH'		
	nnn	Specifies the width of card group separators in pixels.
'VIEW->OPTIONSVIEW->SHOWROWFILTERBUTTONS'		
	Always	Specifies the appearance of row filter drop-down buttons.
	WhenSelected	Specifies the appearance of row filter drop-down buttons.
'VIEW->OPTIONSVIEW->SHOWEDITBUTTONS'		
	Never	Determines the visibility of the editor buttons for the current view.
	Always	Determines the visibility of the editor buttons for the current view.

'VIEW->OPTIONSSELECTION->MULTISELECT'		
TRUE	Specifies whether multiple cells can be selected by end-users.	
FALSE	Specifies whether multiple cells can be selected by end-users.	
'VIEW->OPTIONSSELECTION->UNSELECTFOCUSEDRECORDONEXIT'		
TRUE	Indicates whether to unselect the focused record when the current view loses focus. When "Multi-Select" is checked/true, a grid view enables users to select multiple records. The focused record in this mode can either be selected or not (when Multi-Select is unchecked/false, the focused record is always selected). When a user clicks a specific record, it becomes focused and selected at the same time. If "Unselect Focused Record On Exit" is checked/true and no records are selected save the focused one, the record is automatically unselected on exiting the current view. If several records are selected, the selection of the focused record is not affected. The selection of the focused record persists if "Unselect Focused Record On Exit" is unchecked/false as well.	
FALSE	Indicates whether to unselect the focused record when the current view loses focus. When "Multi-Select" is checked/true, a grid view enables users to select multiple records. The focused record in this mode can either be selected or not (when Multi-Select is unchecked/false, the focused record is always selected). When a user clicks a specific record, it becomes focused and selected at the same time. If "Unselect Focused Record On Exit" is checked/true and no records are selected save the focused one, the record is automatically unselected on exiting the current view. If several records are selected, the selection of the focused record is not affected. The selection of the focused record persists if "Unselect Focused Record On Exit" is unchecked/false as well.	
'VIEW->FILTERBOX->CUSTOMIZEBUTTONALIGNMENT'		
Left	Specifies the "Customize..." button's horizontal alignment within the filter panel.	
Right	Specifies the "Customize..." button's horizontal alignment within the filter panel.	
'VIEW->FILTERBOX->MRUITEMSLISTDROPDOWNCOUNT'		
nnn	Specifies how many filter criteria are simultaneously displayed within the filter drop-down for the filter panel (MRU = Most Recently Used).	
'VIEW->FILTERBOX->POSITION'		
Top	Specifies the filter panel's display position.	
Bottom	Specifies the filter panel's display position.	
'VIEW->FILTERBOX->VISIBLE'		
Never	Specifies the filter panel is always invisible.	
NonEmpty	Specifies the filter panel is visible when filter conditions are applied to the view.	
Always	Specifies the filter panel is always visible.	
'VIEW->FILTERBOX->CUSTOMIZEDIALOG'		
TRUE	Specifies whether the Customize button is displayed within the filter panel.	
FALSE	Specifies whether the Customize button is displayed within the filter panel.	
'VIEW->FILTERING->MRUITEMSLISTCOUNT'		
nnn	Specifies the maximum number of most recently applied filter criteria that are displayed within the filter drop-down for the filter panel (MRU = Most Recently Used).	
'VIEW->FILTERING->ROWMRUITEMSLISTCOUNT'		
nnn	Specifies the maximum number of most recently used filter items that can be displayed within filter drop-downs for card rows.	

Control	Property	Value

DB Card View

VIEW->FINDPANEL->USEDELAYEDFIND'

TRUE

Switches between delayed automatic and manual search modes. When checked delayed automatic mode is enabled. In this mode, a search is initiated automatically after the number of "Input Delay" milliseconds have elapsed since an end-user has stopped typing text in the Find box. When unchecked, end-users need to click either the Find button or press the Enter key within the Find box to apply its search string to grid records.

FALSE

Switches between delayed automatic and manual search modes. When checked delayed automatic mode is enabled. In this mode, a search is initiated automatically after the number of "Input Delay" milliseconds have elapsed since an end-user has stopped typing text in the Find box. When unchecked, end-users need to click either the Find button or press the Enter key within the Find box to apply its search string to grid records.

VIEW->FINDPANEL->APPLYINPUTDELAY'

nnn

Specifies the delay (in milliseconds) before a search is initiated after an end-user has stopped typing text in the Find box.

VIEW->FINDPANEL->CLEARFINDFILTERTEXTONCLOSE'

TRUE

Specifies to allow end-users to clear the Find box and search results by closing the Find Panel.

FALSE

Specifies to allow end-users to clear the Find box and search results by closing the Find Panel.

VIEW->FINDPANEL->HIGHLIGHTSEARCHRESULTS'

TRUE

Controls if search strings are highlighted in located records.

FALSE

Controls if search strings are highlighted in located records.

VIEW->FINDPANEL->SHOWCLEARBUTTON'

TRUE

Specifies whether to display the "Clear" button.

FALSE

Specifies whether to display the "Clear" button.

VIEW->FINDPANEL->SHOWCLOSEBUTTON'

TRUE

Specifies whether to display the "Close" button.

FALSE

Specifies whether to display the "Close" button.

VIEW->FINDPANEL->SHOWFINDBUTTON'

TRUE

Specifies whether to display the "Find" button.

FALSE

Specifies whether to display the "Find" button.

MAKEDBLCLICK		
Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.		
Syntax:		
PROPERTY CustomerName MAKEDBLCLICK ' '		

Control	Property	Value
---------	----------	-------

Database Controls

DB Vertical Grid

ALIGN	<div>NONE</div>	Determines how the control aligns within its container (parent control).
	<div>TOP</div>	Determines how the control aligns within its container (parent control).
	<div>BOTTOM</div>	Determines how the control aligns within its container (parent control).
	<div>LEFT</div>	Determines how the control aligns within its container (parent control).
	<div>RIGHT</div>	Determines how the control aligns within its container (parent control).
	<div>CLIENT</div>	Determines how the control aligns within its container (parent control).
HEIGHT	<div>nnn</div>	Use the Height property to read or change the height of the control.
HINT	<div>HINT</div>	Contains the text string that can appear when the user moves the mouse over the control.
LEFT	<div>nnn</div>	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
TOP	<div>nnn</div>	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	<div>TRUE</div>	Determines whether the component appears on screen.
	<div>FALSE</div>	Determines whether the component appears on screen.
WIDTH	<div>nnn</div>	Specifies the horizontal size of the control or form in pixels.
HIDEONSTARTUP	<div>TRUE</div>	Specifies whether the control is hidden when the form is first launched.
	<div>FALSE</div>	Specifies whether the control is hidden when the form is first launched.
SHOWCUSTOMIZATIONFORM	<div>TRUE</div>	Specifies the display of the Customization Form to provide runtime customization of the control, where end-users can hide and show rows using drag and drop.
	<div>FALSE</div>	Specifies the display of the Customization Form to provide runtime customization of the control, where end-users can hide and show rows using drag and drop.
'FONT->COLOR'	<div>Value</div>	Specifies the base font color of the text.
'FONT->NAME'	<div>Value</div>	Specifies the base font typeface for the text.
'FONT->SIZE'	<div>nnn</div>	Specifies the base font height of the text in points.

'FONT->STYLE'

+Bold Applies the bold style to the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
```

-Bold Removes the bold style from the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
```

+Italic Applies the italic style to the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
```

-Italic Removes the italic style from the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
```

+Underline Applies the underline style to the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
```

-Underline Removes the underline style from the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
```

+StrikeOut Applies the strikeout style to the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
```

-StrikeOut Removes the strikeout style from the base font text.

The following applies the bold and italic font styles, and removes underline:

```

Database Controls

DB Vertical Grid

'LOOKANDFEEL->KIND'

Value

Specifies the look of the control and how the control visually responds on user actions (focus, mouse move, clicks etc.). Basically Kind determines how the control is painted.

Kind options include:

· Flat

· Standard

· UltraFlat

· Office11

'OPTIONSVIEW->SCROLLBARS'

- None

Specifies to display no scroll bars.
- Horizontal

Specifies to display the horizontal scroll bar only.
- Vertical

Specifies to display the vertical scroll bar only.
- Both

Specifies to display both scroll bars.

'STYLEBACKGROUND->COLOR'

Value

Specifies the background color for the background element of the control.

'STYLEBACKGROUND->TEXTCOLOR'

Value

Specifies the text color for the background element of the control.

Control	Property	Value
---------	----------	-------

DB Vertical Grid

'STYLEBACKGROUND->TEXTSTYLE'

- +Bold

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- Bold

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- +Italic

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- Italic

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- +Underline

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- Underline

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- +StrikeOut

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- StrikeOut

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBVerticalGrid1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'

'STYLECONTENT->COLOR'

- Value

Specifies the background color for the content element of the control.

'STYLECONTENT->TEXTCOLOR'

- Value

Specifies the text color for the content element of the control.

LAYOUTSTYLE

BandsView Specifies the record layout within the control, where the grid displays its data in bands.

SingleRecordView Specifies the record layout within the control, where the grid displays a single record.

MultiRecordView Specifies the record layout within the control, where the grid is able to display several records.

Control	Property	Value
---------	----------	-------

Database Controls

DB Vertical Grid

BORDERSTYLE		<div><div>None</div><div>No border is painted around the control.</div></div> <div><div>Default</div><div>The border style is specified by the look and feel applied to the control (see the Look and Feel properties).</div></div>
'OPTIONSVIEW->BANDSINTERVAL'		<div><div>nnn</div><div>Specifies the amount of space in pixels between bands (default = 2).</div></div>
'OPTIONSVIEW->CELLTEXTMAXLINECOUNT'		<div><div>nnn</div><div>Determines the maximum number of lines for cells displayed within the current view.</div></div>
'OPTIONSVIEW->GRIDLINECOLOR'		<div><div>Value</div><div>Specifies the grid line color.</div></div>
'OPTIONSVIEW->GRIDLINES'		<div><div>Horz</div><div>Specifies whether grid lines appear horizontally.</div></div> <div><div>Vert</div><div>Specifies whether grid lines appear vertically.</div></div> <div><div>Both</div><div>Specifies if grid lines appear both vertically and horizontally.</div></div> <div><div>None</div><div>Specifies the grid are not displayed.</div></div>
'OPTIONSVIEW->MULTI RECORDEVENODDCONTENTSTYLE'		<div><div>ByRow</div><div>Specifies the even/odd styles vary by row. The corresponding style is applied to all cells in each row.</div></div> <div><div>ByRecord</div><div>Specifies the even/odd styles vary by record. The corresponding style is applied to all cells in each record.</div></div>
'OPTIONSVIEW->NAVIGATOROFFSET'		<div><div>nnn</div><div>Specifies the distance (in pixels) between the editing control's navigator and the horizontal scroll bar.</div></div>
'OPTIONSVIEW->PAINTSTYLE'		<div><div>dotNet</div><div>Specifies the manner in which the tree list displays data.</div></div> <div><div>Delphi</div><div>Specifies the manner in which the tree list displays data.</div></div>
'OPTIONSVIEW->RECORDSINTERVAL'		<div><div>nnn</div><div>Specifies the amount of space in pixels between data columns (default = 0).</div></div>
'OPTIONSVIEW->ROWHEADERMINWIDTH'		<div><div>nnn</div><div>Specifies the minimum width of row headers in pixels (default = 24). The setting prevents resizing the width of row headers by the user less than determined by the "Row Header Minimum Width" setting. The user can resize the width of row headers if "Header Sizing" is checked/true. If "Row Header Width" is assigned a value less than "Row Header Minimum Width" at runtime, the value of the "Row Header Minimum Width" is assigned.</div></div>
'OPTIONSVIEW->ROWHEADERWIDTH'		<div><div>nnn</div><div>Specifies the width of row headers in pixels (default = 100). If this value is insufficient to display captions entirely then text clipping may occur. If "Row Header Width" is assigned a value less than "Row Header Minimum Width" at runtime, the value of the "Row Header Minimum Width" is assigned. The maximum value that can be assigned to "Row Header Width" is limited by the width of the vertical grid client area minus the "Value Minimum Width" value.</div></div>

Control	Property	Value
---------	----------	-------

Database Controls

DB Vertical Grid

'OPTIONSVIEW->ROWHEIGHT'	<div>nnn</div> <div>Specifies the height of the row in pixels (default = -1). A value of -1 indicates that the height of the row depends on default settings (a row's Styles property and the vertical grid's Font, Styles, Styles Header, Styles Content, Styles Content Even, and Styles Content Odd properties). The Row Height cannot be set less than specified by the Font property. The Row Height property differs from the Height property for row fields, in that the "Row Height" affects all rows in the grid control. The Height property for row fields has priority over the Row Height property.</div>
'OPTIONSVIEW->SCROLLBARS'	<div><div>None</div><div>Specifies to display no scroll bars.</div></div> <div><div>Horizontal</div><div>Specifies to display the horizontal scroll bar only.</div></div> <div><div>Vertical</div><div>Specifies to display the vertical scroll bar only.</div></div> <div><div>Both</div><div>Specifies to display both scroll bars.</div></div>
'OPTIONSVIEW->VALUEMINWIDTH'	<div>nnn</div> <div>Specifies the minimum width of data cells in pixels (default = 40). If the value of the Band Sizing is checked/true and the Layout Style is "Multi-Record View", the user can drag the right edge of the first data column to resize the width of all data columns in the grid. In this case the user couldn't resize the data columns less than specified by the "Value Minimum Width" value. If "Value Width" is assigned a value less than "Value Minimum Width", the "Value Minimum Width" value will be assigned.</div>
'OPTIONSVIEW->VALUEWIDTH'	<div>nnn</div> <div>Specifies the width of data cells in pixels (default = 100). This property affects the data cell width if the "Layout Style" is set to "Bands View" or "Multi-Record View" and the value of the Auto Scale is unchecked/false. If this value is insufficient to display data in cells entirely then text clipping may occur. If "Value Width" is assigned a value less than "Value Minimum Width", the "Value Minimum Width" value will be assigned.</div>
'OPTIONSBEHAVIOR->CELLHINTS'	<div><div>TRUE</div><div>Specifies whether a hint is displayed for a cell when the text does not fit into the cell's area.</div></div> <div><div>FALSE</div><div>Specifies whether a hint is displayed for a cell when the text does not fit into the cell's area.</div></div>
'OPTIONSBEHAVIOR->FOCUSCELLONCYCLE'	<div><div>TRUE</div><div>Determines the manner in which edit cells are focused.</div></div> <div><div>FALSE</div><div>Determines the manner in which edit cells are focused.</div></div>
'OPTIONSBEHAVIOR->ALLOWCHANGERECORD'	<div><div>TRUE</div><div>Specifies whether scrolling through records is enabled. This property is in effect when the value of the Layout Style is "Single Record View" or "Bands View". If "Allow Change Record" property is checked/true, the user can scroll through records using the horizontal scroll bar or left arrow and right arrow keys.</div></div> <div><div>FALSE</div><div>Specifies whether scrolling through records is enabled. This property is in effect when the value of the Layout Style is "Single Record View" or "Bands View". If "Allow Change Record" property is checked/true, the user can scroll through records using the horizontal scroll bar or left arrow and right arrow keys.</div></div>
'OPTIONSBEHAVIOR->ALWAYSSHOWEDITOR'	<div><div>TRUE</div><div>Determines whether the focused cell's editor is always active.</div></div> <div><div>FALSE</div><div>Determines whether the focused cell's editor is always active.</div></div>

Control	Property	Value
---------	----------	-------

Database Controls

DB Vertical Grid

'OPTIONSBEHAVIOR->BANDSIZING'		
TRUE	Specifies the band resizing availability. When the Layout Style is "Bands View", if the band doesn't occupy all the width of the grid control's client area (when Auto Scale Bands is unchecked/false), Band Sizing specifies whether the user can change the band's width. If Band Sizing is checked/true, the user can drag the right edge of the band to resize the band's width. Note: If the Layout Style is "Multi-Record View" and Band Sizing is checked/true, the user can drag the right edge of the first data column to resize the width of all data columns in the grid. The user cannot resize the data columns width less than specified by the Value Minimum Width property.	
FALSE	Specifies the band resizing availability. When the Layout Style is "Bands View", if the band doesn't occupy all the width of the grid control's client area (when Auto Scale Bands is unchecked/false), Band Sizing specifies whether the user can change the band's width. If Band Sizing is checked/true, the user can drag the right edge of the band to resize the band's width. Note: If the Layout Style is "Multi-Record View" and Band Sizing is checked/true, the user can drag the right edge of the first data column to resize the width of all data columns in the grid. The user cannot resize the data columns width less than specified by the Value Minimum Width property.	
'OPTIONSBEHAVIOR->FOCUSFIRSTCELLONNEWRECORD'		
TRUE	Determines whether the focus moves to the first cell of a newly created row.	
FALSE	Determines whether the focus moves to the first cell of a newly created row.	
'OPTIONSBEHAVIOR->GOTONEXTCELLONENTER'		
TRUE	Determines whether control items can be navigated by using the [Enter] key.	
FALSE	Determines whether control items can be navigated by using the [Enter] key.	
'OPTIONSBEHAVIOR->GOTONEXTCELLONTAB'		
TRUE	Determines whether the [Tab] key is used to navigate through the current editing control cells.	
FALSE	Determines whether the [Tab] key is used to navigate through the current editing control cells.	
'OPTIONSBEHAVIOR->HEADERSIZING'		
TRUE	Specifies whether the user can change row headers width. If the value of the Header Sizing is checked/true, the user can drag the right edge of the header column to resize row header column width.	
FALSE	Specifies whether the user can change row headers width. If the value of the Header Sizing is checked/true, the user can drag the right edge of the header column to resize row header column width.	
'OPTIONSBEHAVIOR->IMMEDIATEEDITOR'		
TRUE	Determines whether the appropriate editor is activated immediately after an edit cell is clicked.	
FALSE	Determines whether the appropriate editor is activated immediately after an edit cell is clicked.	
'OPTIONSBEHAVIOR->NAVIGATORHINTS'		
TRUE	Specifies if hints should be displayed for buttons displayed in an editing control's navigator.	
FALSE	Specifies if hints should be displayed for buttons displayed in an editing control's navigator.	

Control	Property	Value
---------	----------	-------

Database Controls

DB Vertical Grid

'OPTIONSBEHAVIOR->ROWSIZING'		
TRUE	Specifies whether the user can change the row height. If the value of the Row Sizing is checked/true, the user can drag the bottom edge of any row in the grid control to resize the desired row height.	
FALSE	Specifies whether the user can change the row height. If the value of the Row Sizing is checked/true, the user can drag the bottom edge of any row in the grid control to resize the desired row height.	
'OPTIONSBEHAVIOR->ROWTRACKING'		
TRUE	Enables row tracking when the user moves the mouse pointer over rows while pressing left mouse button. Row Tracking enables changing of the current row appearance and the item editor activation when the user moves the mouse pointer over rows while pressing left mouse button. If Row Tracking property is unchecked/false, just the first row that the user clicks on when starts moving the mouse pointer changes its appearance while the others retain their state.	
FALSE	Enables row tracking when the user moves the mouse pointer over rows while pressing left mouse button. Row Tracking enables changing of the current row appearance and the item editor activation when the user moves the mouse pointer over rows while pressing left mouse button. If Row Tracking property is unchecked/false, just the first row that the user clicks on when starts moving the mouse pointer changes its appearance while the others retain their state.	
'OPTIONSDATA->APPENDING'		
TRUE	Determines whether a user can add a new record by pressing the down arrow on the keyboard when focus is on the last grid row.	
FALSE	Determines whether a user can add a new record by pressing the down arrow on the keyboard when focus is on the last grid row.	
'OPTIONSDATA->CANCELONEXIT'		
TRUE	Determines whether empty records are posted into a data set when the grid view loses focus.	
FALSE	Determines whether empty records are posted into a data set when the grid view loses focus.	
'OPTIONSDATA->DELETING'		
TRUE	Determines whether a user is allowed to delete records within a View by pressing the [Del] or [Ctrl+Del] keys.	
FALSE	Determines whether a user is allowed to delete records within a View by pressing the [Del] or [Ctrl+Del] keys.	
'OPTIONSDATA->DELETINGCONFIRMATION'		
TRUE	Determines whether a message box appears requiring confirmation of the user's request to delete a row.	
FALSE	Determines whether a message box appears requiring confirmation of the user's request to delete a row.	
'OPTIONSDATA->EDITING'		
TRUE	Determines whether a user can edit records within a view.	
FALSE	Determines whether a user can edit records within a view.	

Control	Property	Value
---------	----------	-------

Database Controls

DB Vertical Grid

'OPTIONS DATA->INSERTING'		
TRUE	Determines whether a user can insert records by pressing the [Insert] key or via the new item row.	
FALSE	Determines whether a user can insert records by pressing the [Insert] key or via the new item row.	
'OPTIONS VIEW->AUTOSCALE BANDS'		
TRUE	Specifies if the band fills the width of all client area of the grid control. When the Layout Style is "Bands View", this property specifies the band width adjusting within the grid control. If Auto Scale Bands is checked/true, the grid control automatically adjusts the band's width to the width of the control client area. Auto Scale Bands affects the cell auto-height adjustment (which can be enabled with the Cell Auto Height setting).	
FALSE	Specifies if the band fills the width of all client area of the grid control. When the Layout Style is "Bands View", this property specifies the band width adjusting within the grid control. If Auto Scale Bands is checked/true, the grid control automatically adjusts the band's width to the width of the control client area. Auto Scale Bands affects the cell auto-height adjustment (which can be enabled with the Cell Auto Height setting).	
'OPTIONS VIEW->CATEGORY EXPLORER STYLE'		
TRUE	Determines whether to display category rows as the MS Explorer paint style.	
FALSE	Determines whether to display category rows as the MS Explorer paint style.	
'OPTIONS VIEW->CELL AUTO HEIGHT'		
TRUE	Specifies whether the cell height varies according to the cell's text length.	
FALSE	Specifies whether the cell height varies according to the cell's text length.	
'OPTIONS VIEW->CELL ELLIPSIS'		
TRUE	Specifies to display an ellipsis when the entire text cannot be displayed within a cell.	
FALSE	Specifies to display an ellipsis when the entire text cannot be displayed within a cell.	
'OPTIONS VIEW->SHOW BUTTONS'		
TRUE	Specifies whether to display expand buttons of the parent rows. If Show Buttons is checked/true, and Expand Button is checked/true, an expand button will appear on each parent row. The user can click the button to expand or collapse the parent row as an alternative to double-clicking the parent row.	
FALSE	Specifies whether to display expand buttons of the parent rows. If Show Buttons is checked/true, and Expand Button is checked/true, an expand button will appear on each parent row. The user can click the button to expand or collapse the parent row as an alternative to double-clicking the parent row.	
'OPTIONS VIEW->SHOW HEADERS'		
TRUE	Specifies whether to display row headers. If Show Headers is checked/true, row header columns will appear in the grid control. Otherwise only data columns will be shown.	
FALSE	Specifies whether to display row headers. If Show Headers is checked/true, row header columns will appear in the grid control. Otherwise only data columns will be shown.	
'NAVIGATOR->VISIBLE'		
TRUE	Specifies whether to display a controller to navigate through visible rows in the order that they are displayed on screen.	
FALSE	Specifies whether to display a controller to navigate through visible rows in the order that they are displayed on screen.	

Control	Property	Value
---------	----------	-------

Database Controls

DB Vertical Grid

'NAVIGATOR->INFOPANEL->VISIBLE'

- TRUE

Specifies whether to display the record number and total record count for the current dataset.
- FALSE

Specifies whether to display the record number and total record count for the current dataset.

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

'FONT->STYLE'

+Bold Applies the bold style to the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'FONT->STYLE' '+Bold'
PROPERTY DBPivot1 'FONT->STYLE' '+Italic'
PROPERTY DBPivot1 'FONT->STYLE' '-Underline'
```

-Bold Removes the bold style from the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'FONT->STYLE' '+Bold'
PROPERTY DBPivot1 'FONT->STYLE' '+Italic'
PROPERTY DBPivot1 'FONT->STYLE' '-Underline'
```

+Italic Applies the italic style to the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'FONT->STYLE' '+Bold'
PROPERTY DBPivot1 'FONT->STYLE' '+Italic'
PROPERTY DBPivot1 'FONT->STYLE' '-Underline'
```

-Italic Removes the italic style from the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'FONT->STYLE' '+Bold'
PROPERTY DBPivot1 'FONT->STYLE' '+Italic'
PROPERTY DBPivot1 'FONT->STYLE' '-Underline'
```

+Underline Applies the underline style to the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'FONT->STYLE' '+Bold'
PROPERTY DBPivot1 'FONT->STYLE' '+Italic'
PROPERTY DBPivot1 'FONT->STYLE' '-Underline'
```

-Underline Removes the underline style from the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'FONT->STYLE' '+Bold'
PROPERTY DBPivot1 'FONT->STYLE' '+Italic'
PROPERTY DBPivot1 'FONT->STYLE' '-Underline'
```

+StrikeOut Applies the strikeout style to the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'FONT->STYLE' '+Bold'
PROPERTY DBPivot1 'FONT->STYLE' '+Italic'
PROPERTY DBPivot1 'FONT->STYLE' '-Underline'
```

-StrikeOut Removes the strikeout style from the base font text.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'FONT->STYLE' '+Bold'
PROPERTY DBPivot1 'FONT->STYLE' '+Italic'
PROPERTY DBPivot1 'FONT->STYLE' '-Underline'
```

Control	Property	Value

'LOOKANDFEEL->KIND'

Value Specifies the look of the control and how the control visually responds on user actions (focus, mouse move, clicks etc.). Basically Kind determines how the control is painted.

Kind options include:

- Flat
- Standard
- UltraFlat
- Office11

'OPTIONSVIEW->SCROLLBARS'

None Specifies to display no scroll bars.

Horizontal Specifies to display the horizontal scroll bar only.

Vertical Specifies to display the vertical scroll bar only.

Both Specifies to display both scroll bars.

'STYLEBACKGROUND->COLOR'

Value Specifies the background color for the background element of the control.

'STYLEBACKGROUND->TEXTCOLOR'

Value Specifies the text color for the background element of the control.

Control	Property	Value
---------	----------	-------

Database Controls

'STYLEBACKGROUND->TEXTSTYLE'

- +Bold

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- Bold

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- +Italic

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- Italic

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- +Underline

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- Underline

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- +StrikeOut

Specifies the font style for the background element of the control.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Bold'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '+Italic'
PROPERTY DBPivot1 'STYLEBACKGROUND->TEXTSTYLE' '-Underline'
- StrikeOut

-Italic Specifies the font style for the selected item element of the control.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '+Bold'  
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '+Italic'  
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '-Underline'
```

+Underline Specifies the font style for the selected item element of the control.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '+Bold'  
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '+Italic'  
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '-Underline'
```

-Underline Specifies the font style for the selected item element of the control.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '+Bold'  
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '+Italic'  
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '-Underline'
```

+StrikeOut Specifies the font style for the selected item element of the control.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '+Bold'  
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '+Italic'  
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '-Underline'
```

-StrikeOut Specifies the font style for the selected item element of the control.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '+Bold'  
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '+Italic'  
PROPERTY DBPivot1 'STYLESELECTED->TEXTSTYLE' '-Underline'
```

BORDERSTYLE

- None** No border is painted around the control.
- Default** The border style is specified by the look and feel applied to the control (see the Look and Feel properties).

DB Pivot Grid

'OPTIONSVIEW->COLUMNGRANDTOTALTEXT'	Value	Specifies the grand total column's caption. If empty, the grand total column's header displays the text "Grand Total".
'OPTIONSVIEW->COLUMNGRANDTOTALWIDTH'	nnn	Specifies the total column's width.
'OPTIONSVIEW->COLUMNTOTALSLOCATION'	Far	Specifies the subtotal and grand total columns are shown on the right side of the data area.
	Near	Specifies the subtotal and grand total columns are shown on the left side of the data area.
'OPTIONSVIEW->DROPARROWCOLOR'	Value	Specifies the color of the drop arrow (indicating the drop position of the field, which is currently dragged).
'OPTIONSVIEW->FILTERDROPDOWNMAXITEMCOUNT'	nnn	Specifies the number of the field's drop-down list items, which are currently visible in the drop-down list.
'OPTIONSVIEW->FILTERDROPDOWNWIDTH'	nnn	Specifies the width of the field's drop-down list.
'OPTIONSVIEW->GRIDLINECOLOR'	Value	Specifies the grid line color.
'OPTIONSVIEW->GRIDLINES'	None	Specifies the grid are not displayed.
	Horz	Specifies whether grid lines appear horizontally.
	Vert	Specifies whether grid lines appear vertically.
	Both	Specifies if grid lines appear both vertically and horizontally.
'OPTIONSVIEW->HEADERFILTERBUTTONSHOWMODE'	Button	Specifies the display mode for filter drop-down buttons with a normal filter drop-down button which provides no specific indication when the grid is filtered by a column's values.
	SmartTag	Specifies the display mode for filter drop-down buttons with a specially designed tiny image imitating a smart tag. The image is highlighted when the grid is filtered by a column's values to help end-users easily discern which columns have a filter applied.
'OPTIONSVIEW->ROWGRANDTOTALTEXT'	Value	Specifies the grand total row's caption. If an empty string is set to this property, the grand total row's header displays the text "Grand Total".
'OPTIONSVIEW->ROWGRANDTOTALWIDTH'	nnn	Specifies the total row's width (default = 0).

Form Controls and Properties		Database Controls
Control	Property	Value
Database Controls		
DB Pivot Grid		
'OPTIONSVIEW->ROWTOTALSLOCATION'		
	Far	Specifies the location of subtotal and grand total rows, relative to the data area, where subtotal and grand total rows are shown on the bottom side of the data area.
	Near	Specifies the location of subtotal and grand total rows, relative to the data area, subtotal and grand total rows are shown on the top side of the data area.
	Tree	Specifies the location of subtotal and grand total rows, relative to the data area, where subtotal and grand total rows are shown on the bottom side of the data area, and all rows are shown across one column in a tree-like manner.
'OPTIONSVIEW->SHOWHEADERFILTERBUTTONS'		
	Always	Specifies filter buttons are always shown in headers.
	WhenSelected	Specifies filter buttons are only displayed in the selected header.
'OPTIONSVIEW->COLUMNFIELDS'		
	TRUE	Specifies whether the column header area is visible.
	FALSE	Specifies whether the column header area is visible.
'OPTIONSVIEW->COLUMNGRANDTOTALS'		
	TRUE	Specifies whether to suppress the grand total for columns.
	FALSE	Specifies whether to suppress the grand total for columns.
'OPTIONSVIEW->COLUMNTOTALS'		
	TRUE	Specifies whether to suppress subtotals for columns.
	FALSE	Specifies whether to suppress subtotals for columns.
'OPTIONSVIEW->DATAFIELDS'		
	TRUE	Specifies whether the data header area is visible.
	FALSE	Specifies whether the data header area is visible.
'OPTIONSVIEW->FILTERFIELDS'		
	TRUE	Specifies whether the filter header area is visible.
	FALSE	Specifies whether the filter header area is visible.
'OPTIONSVIEW->FILTERSEPARATOR'		
	TRUE	Specifies whether the filter header area separator is visible.
	FALSE	Specifies whether the filter header area separator is visible.
'OPTIONSVIEW->GRANDTOTALSFORSINGLEVALUES'		
	TRUE	Specifies whether to suppress the grand total for single data items.
	FALSE	Specifies whether to suppress the grand total for single data items.
'OPTIONSVIEW->MARKNARROWCELLS'		
	TRUE	Specifies whether to show an arbitrary sequence of pound characters (#) in the data cell when the data cell's width does not allow drawing its current value entirely.
	FALSE	Specifies whether to show an arbitrary sequence of pound characters (#) in the data cell when the data cell's width does not allow drawing its current value entirely.
'OPTIONSVIEW->ROWFIELDS'		
	TRUE	Specifies whether the row header area is visible.
	FALSE	Specifies whether the row header area is visible.

Database Controls

DB Pivot Grid

'OPTIONSVIEW->ROWGRANDTOTALS'		
TRUE	Specifies whether to suppress the grand total for rows.	
FALSE	Specifies whether to suppress the grand total for rows.	
'OPTIONSVIEW->ROWTOTALS'		
TRUE	Specifies whether to suppress the subtotals for rows.	
FALSE	Specifies whether to suppress the subtotals for rows.	
'OPTIONSVIEW->TOTALSFORSINGLEVALUE'		
TRUE	Specifies whether to suppress the subtotals for single data items.	
FALSE	Specifies whether to suppress the subtotals for single data items.	
'OPTIONSBEHAVIOR->CELLHINTS'		
TRUE	Specifies whether a hint is displayed for a cell when the text does not fit into the cell's area.	
FALSE	Specifies whether a hint is displayed for a cell when the text does not fit into the cell's area.	
'OPTIONSBEHAVIOR->FIELDHEADERHINTS'		
TRUE	Specifies whether hints are displayed for fields that have truncated captions.	
FALSE	Specifies whether hints are displayed for fields that have truncated captions.	
'OPTIONSBEHAVIOR->FOCUSCELLONCYCLE'		
TRUE	Determines the manner in which edit cells are focused.	
FALSE	Determines the manner in which edit cells are focused.	
'OPTIONSBEHAVIOR->FOCUSCELLONTAB'		
TRUE	Specifies whether the [Tab] key is used to navigate through data cells. When checked/true, the setting allows end-users to navigate through data cells using the [Tab] and [Shift+Tab] keys. When unchecked/false, these keys navigate the form controls instead. Note: Moving the cell focus outside of the DB Pivot Grid from the first or last data cell results in removing the focus from the DB Pivot Grid control and focusing the next or previous control in a form (based upon the form's tab order).	
FALSE	Specifies whether the [Tab] key is used to navigate through data cells. When checked/true, the setting allows end-users to navigate through data cells using the [Tab] and [Shift+Tab] keys. When unchecked/false, these keys navigate the form controls instead. Note: Moving the cell focus outside of the DB Pivot Grid from the first or last data cell results in removing the focus from the DB Pivot Grid control and focusing the next or previous control in a form (based upon the form's tab order).	
'OPTIONSBEHAVIOR->GROUPHEADERHINTS'		
TRUE	Specifies whether hints are displayed for column and row field values with a truncated content.	
FALSE	Specifies whether hints are displayed for column and row field values with a truncated content.	
'OPTIONSCUSTOMIZE->FILTERING'		
TRUE	Specifies whether end-users can filter data against all the fields.	
FALSE	Specifies whether end-users can filter data against all the fields.	

Control	Property	Value
---------	----------	-------

Database Controls

DB Pivot Grid

'OPTIONSCUSTOMIZE->FILTERRESIZABLE'

- TRUE

Specifies whether the field's drop-down list can be resized.
- FALSE

Specifies whether the field's drop-down list can be resized.

'OPTIONSCUSTOMIZE->HIDING'

- TRUE

Specifies the enabled state of the "Hide" menu item within the field header context menu. The "Hide" menu item of the field header context menu corresponds to the operation, which moves the selected field to the Customization Form. Thus this field will be hidden in the view. Set the Hiding property to unchecked/false, to disable the Hide menu item.
- FALSE

Specifies the enabled state of the "Hide" menu item within the field header context menu. The "Hide" menu item of the field header context menu corresponds to the operation, which moves the selected field to the Customization Form. Thus this field will be hidden in the view. Set the Hiding property to unchecked/false, to disable the Hide menu item.

'OPTIONSCUSTOMIZE->MOVING'

- TRUE

Specifies whether fields can be dragged by end-users or not. In order to drag columns to the Customization Form, Moving must be checked/true.
- FALSE

Specifies whether fields can be dragged by end-users or not. In order to drag columns to the Customization Form, Moving must be checked/true.

'OPTIONSCUSTOMIZE->QUICKCUSTOMIZATION'

- TRUE

Specifies the enabled state of the "Show Field List" menu item within the field header context menu and the header area context menu.
- FALSE

Specifies the enabled state of the "Show Field List" menu item within the field header context menu and the header area context menu.

'OPTIONSCUSTOMIZE->QUICKPREFILTERING'

- TRUE

Specifies the enabled state of the "Show Prefilter Dialog" menu item within the header area context menu.
- FALSE

Specifies the enabled state of the "Show Prefilter Dialog" menu item within the header area context menu.

'OPTIONSCUSTOMIZE->SIZING'

- TRUE

Specifies whether the fields' width can be changed by end-users or not.
- FALSE

Specifies whether the fields' width can be changed by end-users or not.

'OPTIONSCUSTOMIZE->SORTING'

- TRUE

Specifies if end-users can change the sort order of fields.
- FALSE

Specifies if end-users can change the sort order of fields.

'OPTIONSCUSTOMIZE->SORTINGBYGROUPVALUES'

- TRUE

Specifies if end-users can change the sort order of group values.
- FALSE

Specifies if end-users can change the sort order of group values.

'OPTIONSDATAFIELD->AREA'

- None

Specifies the data field anchor is hidden.
- Column

Specifies the data field anchor is shown in the column header area.
- Row

Specifies the data field anchor is shown in the row header area.

Control	Property	Value
---------	----------	-------

Database Controls

DB Pivot Grid

'OPTIONSDATAFIELD->AREAINDEX'	nnn	Specifies the data field anchor's current position in the sequence of fields in the drop area.
'OPTIONSDATAFIELD->CAPTION'	Value	Specifies the data field anchor's caption.
'OPTIONSDATAFIELD->WIDTH'	nnn	Specifies the minimum width of the data field anchor, if it's dropped only in the row header area.
'OPTIONSDATAFIELD->MINWIDTH'	nnn	Specifies the width of the data field anchor, if it's dropped only in the row header area.
'OPTIONSDATAFIELD->MOVING'	TRUE	Specifies whether the data field anchor can be dragged by an end-user.
	FALSE	Specifies whether the data field anchor can be dragged by an end-user.
'OptionsSelection->HideFocusRect'	TRUE	Specifies whether the focus rectangle is displayed around the focused data cell when the pivot grid loses focus.
	FALSE	Specifies whether the focus rectangle is displayed around the focused data cell when the pivot grid loses focus.
'OptionsSelection->HideSelection'	TRUE	Specifies whether the selected data cell remains highlighted when the pivot grid loses focus.
	FALSE	Specifies whether the selected data cell remains highlighted when the pivot grid loses focus.

'OptionsSelection->IncludeCells'

- +CrossCells

Specifies cross cells can be selected by an end-user.

The following includes the grand total and total cells, and excludes cross cells:
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '+GrandTotalCells'
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '+TotalCells'
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '-CrossCells'
- CrossCells

Specifies cross cells can not be selected by an end-user.

The following includes the grand total and total cells, and excludes cross cells:
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '+GrandTotalCells'
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '+TotalCells'
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '-CrossCells'
- +GrandTotalCells

Specifies grand total cells can be selected by an end-user.

The following includes the grand total and total cells, and excludes cross cells:
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '+GrandTotalCells'
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '+TotalCells'
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '-CrossCells'
- GrandTotalCells

Specifies grand total cells can not be selected by an end-user.

The following includes the grand total and total cells, and excludes cross cells:
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '+GrandTotalCells'
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '+TotalCells'
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '-CrossCells'
- +TotalCells

Specifies total cells can be selected by an end-user.

The following includes the grand total and total cells, and excludes cross cells:
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '+GrandTotalCells'
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '+TotalCells'
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '-CrossCells'
- TotalCells

Specifies total cells can not be selected by an end-user.

The following includes the grand total and total cells, and excludes cross cells:
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '+GrandTotalCells'
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '+TotalCells'
PROPERTY DBPivot1 'OptionsSelection->IncludeCells' '-CrossCells'

'OptionsSelection->MultiSelect'

- TRUE

Specifies whether multiple data cells can be selected by an end-user.
- FALSE

Specifies whether multiple data cells can be selected by an end-user.

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

Variable Controls

Variable Controls

Variable Label

ALIGN

- NONE** Determines how the control aligns within its container (parent control).
- TOP** Determines how the control aligns within its container (parent control).
- BOTTOM** Determines how the control aligns within its container (parent control).
- LEFT** Determines how the control aligns within its container (parent control).
- RIGHT** Determines how the control aligns within its container (parent control).
- CLIENT** Determines how the control aligns within its container (parent control).

ALIGNMENT

- LEFT** Text is left-justified: Lines all begin at the left edge of the control.
- CENTER** Text is centered in the control.
- RIGHT** Text is right-justified: Lines all end at the right edge of the control.

AUTOSIZE

- TRUE** Specifies whether the control sizes itself automatically to accommodate its contents.
- FALSE** Specifies whether the control sizes itself automatically to accommodate its contents.

BEVELWIDTH

- nnn** Use BevelWidth to specify how wide the inner or outer bevel should be.

WIDTH	<div>nnn</div> <div>Specifies the horizontal size of the control or form in pixels.</div>

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Label

WORDWRAP

- TRUE

Specifies whether the label text wraps when it is too long for the width of the label.
- FALSE

Specifies whether the label text wraps when it is too long for the width of the label.

CONDENSECAPTION

- Value

Specifies how the contents of the text is displayed in situations where the text is too long for the display area.
- Options:
- . None

. AtEnd

. WithinPath
- When set to AtEnd, if the Caption does not fit within the control's bounds, the end of the string is replaced with an ellipsis (...). When set to WithinPath, the Caption is condensed so that the start and end of the path string is displayed within the bounds of the control.

LAYOUT

- CENTER

Specifies how the text of the label is placed within the client rectangle of the label control.
- TOP

Specifies how the text of the label is placed within the client rectangle of the label control.
- BOTTOM

Specifies how the text of the label is placed within the client rectangle of the label control.

DISPLAYFORMAT

- Value

Specifies the display format for the control.
- Examples:
- PROPERTY CI_LastUpdate DISPLAYFORMAT 'dddd, mmmm dd, yyyy'

PROPERTY CI_UpdateTime DISPLAYFORMAT 'h:nn:ss AM/PM'

PROPERTY CI_TotalAmount DISPLAYFORMAT '#,0.00; -#,0.00'

PROPERTY CI_FinalCalib DISPLAYFORMAT '#.#,E+00'

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

FIRSTCHAR

TRUE Specifies whether the cursor will appear in the component starting position.

FALSE Specifies whether the cursor will appear in the component starting position.

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Edit

LASTCHAR	TRUE	Specifies whether the cursor will appear in the component ending position.
	FALSE	Specifies whether the cursor will appear in the component ending position.
READONLYCOLOR	Value	Specifies the background color of the control when set to "read only".
READONLYCOLORONFOCUS	TRUE	Enables the "Read-Only" Color if the cursor focus is on the control.
	FALSE	Enables the "Read-Only" Color if the cursor focus is on the control.
PREVENTCOPY	TRUE	Specifies whether text can be copied from the field.
	FALSE	Specifies whether text can be copied from the field.
PREVENTCUT	TRUE	Specifies whether text can be cut from the field.
	FALSE	Specifies whether text can be cut from the field.
PREVENTPASTE	FALSE	Specifies whether text can be pasted into the field.
	TRUE	Specifies whether text can be pasted into the field.
VALIDATEDATATYPE	TRUE	Specifies if the data type value is validated when exiting the field.
	FALSE	Specifies if the data type value is validated when exiting the field.
CUEBANNER	Value	Specifies a text hint to appear in the field, which disappears when the focus lands on the field.
CUEBANNERFOCUSED	TRUE	Specifies if the hint remains until keystrokes are pressed (Windows Vista, 7, and higher only).
	FALSE	Specifies if the hint remains until keystrokes are pressed (Windows Vista, 7, and higher only).
BALLOONTIPTITLE	Value	Specifies the tip title. The maximum length for the balloon tip title is 99 characters.
	Example: PROPERTY PEdit_PO ShowBalloonTip TRUE PROPERTY PEdit_PO BalloonTipTitle 'Attention' PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.' PROPERTY PEdit_PO BalloonTipIcon bttlInfo	

Variable Controls

Variable Edit

SHOWBALLOONTIP

- TRUE

Specifies if the balloon tip is displayed.

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
PROPERTY PEdit_PO BalloonTipIcon bttlInfo
```
- FALSE

Specifies if the balloon tip is displayed.

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
PROPERTY PEdit_PO BalloonTipIcon bttlInfo
```

BALLOONTIPTEXT

- Value

Specifies the tip text.

Example:

```
PROPERTY PEdit_PO ShowBalloonTip TRUE
PROPERTY PEdit_PO BalloonTipTitle 'Attention'
PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.'
PROPERTY PEdit_PO BalloonTipIcon bttlInfo
```

Form Controls and Properties		Variable Controls
Control	Property	Value
Variable Controls		
Variable Edit		
BALLOONTIPICON		
None	No icon is displayed in the balloon tip.	
	Example:	
	PROPERTY PEdit_PO ShowBalloonTip TRUE PROPERTY PEdit_PO BalloonTipTitle 'Attention' PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.' PROPERTY PEdit_PO BalloonTipIcon Info	
Info	An "info" icon is displayed in the balloon tip.	
	Example:	
	PROPERTY PEdit_PO ShowBalloonTip TRUE PROPERTY PEdit_PO BalloonTipTitle 'Attention' PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.' PROPERTY PEdit_PO BalloonTipIcon Info	
Warning	A "warning" icon is displayed in the balloon tip.	
	Example:	
	PROPERTY PEdit_PO ShowBalloonTip TRUE PROPERTY PEdit_PO BalloonTipTitle 'Attention' PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.' PROPERTY PEdit_PO BalloonTipIcon Info	
Error	An "error" icon is displayed in the balloon tip.	
	Example:	
	PROPERTY PEdit_PO ShowBalloonTip TRUE PROPERTY PEdit_PO BalloonTipTitle 'Attention' PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.' PROPERTY PEdit_PO BalloonTipIcon Info	
Info_Large	A large "info" icon is displayed in the balloon tip (Windows Vista, 7, and higher only).	
	Example:	
	PROPERTY PEdit_PO ShowBalloonTip TRUE PROPERTY PEdit_PO BalloonTipTitle 'Attention' PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.' PROPERTY PEdit_PO BalloonTipIcon Info	
Warning_Large	A large "warning" icon is displayed in the balloon tip (Windows Vista, 7, and higher only).	
	Example:	
	PROPERTY PEdit_PO ShowBalloonTip TRUE PROPERTY PEdit_PO BalloonTipTitle 'Attention' PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.' PROPERTY PEdit_PO BalloonTipIcon Info	
Error_Large	A large "error" icon is displayed in the balloon tip (Windows Vista, 7, and higher only).	
	Example:	
	PROPERTY PEdit_PO ShowBalloonTip TRUE PROPERTY PEdit_PO BalloonTipTitle 'Attention' PROPERTY PEdit_PO BalloonTipText 'A Purchase Order Number is Required.' PROPERTY PEdit_PO BalloonTipIcon Info	

Form Controls and Properties		Variable Controls
Control	Property	Value
Variable Controls		Variable Edit
BALLOONTIPICON	PROPERTY PEdit_PO BalloonTipIcon Info	
EDITMASK	Value	Specifies the format mask for the control.
DISPLAYFORMAT	Value	Specifies the display format for the control. Examples: PROPERTY CI_LastUpdate DISPLAYFORMAT 'dddd, mmmm dd, yyyy' PROPERTY CI_UpdateTime DISPLAYFORMAT 'h:nn:ss AM/PM' PROPERTY CI_TotalAmount DISPLAYFORMAT '#,0.00;-#,0.00' PROPERTY CI_FinalCalib DISPLAYFORMAT '#.#,E+00'
MAXLINEWIDTH	nnn	Specifies the limited width of the pop-up menu. Example: PROPERTY CompID MaxLineWidth 250
PMSINGLECLICK	TRUE	Specifies if only a single click is accepted to choose an item.
	FALSE	Specifies if only a single click is accepted to choose an item.
REQUIREVALUEONFORMCLOSE	TRUE	Specifies the control is checked if it has a value in the form's "On Close" event.
	FALSE	Specifies the control is checked if it has a value in the form's "On Close" event.
VALUEISREQUIREDMESSAGE	Text	Specifies the displayed message if REQUIREVALUEONEXIT or REQUIREVALUEONFORMCLOSE is True, and a value is not entered/specified for the control.
PMSKIP	TRUE	Specifies if the focus is automatically shifted to the next object in the tab order when the pop-up menu is closed.
	FALSE	Specifies if the focus is automatically shifted to the next object in the tab order when the pop-up menu is closed.
PMTABLE	Value	Specifies the table/view the menu values will be retrieved from.
PMCOLUMN	Value	Specifies the column returned for the pop-up menu selection.
PMSELECT	Value	Specifies the column(s) and/or expression for the table/view data source.
PMWHERE	Value	Specifies the WHERE Clause, to limit the menu values for the pop-up menu.
PMLINES	nn	Specifies the number of values displayed in the pop-up menu list.

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Edit

PMCAPTION

Value Specifies the caption value which the pop-up menu will display when visible.

PMTITLE

Value Specifies the title value which the pop-up menu will display when visible.

MAKERIGHTCLICK

Specifies to fire the "On Right Click" EEP for the control, simulating a mouse right click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerList MAKERIGHTCLICK ' '
```

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

Control	Property	Value

Variable Controls

Variable Memo

ALIGN

- NONE

Determines how the control aligns within its container (parent control).
- TOP

Determines how the control aligns within its container (parent control).
- BOTTOM

Determines how the control aligns within its container (parent control).
- LEFT

Determines how the control aligns within its container (parent control).
- RIGHT

Determines how the control aligns within its container (parent control).
- CLIENT

Determines how the control aligns within its container (parent control).

ALIGNMENT

- LEFT

Text is left-justified: Lines all begin at the left edge of the control.
- CENTER

Text is centered in the control.
- RIGHT

Text is right-justified: Lines all end at the right edge of the control.

COLOR

- Value

Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

Control	Property	Value

Variable Controls

Variable Memo

ENABLED	TRUE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
	FALSE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
FRAMEVISIBLE	TRUE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
	FALSE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HIDESELECTION	TRUE	Determines whether the visual indication of the selected text remains when focus shifts to another control.
	FALSE	Determines whether the visual indication of the selected text remains when focus shifts to another control.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
MAXLENGTH	nnn	Specifies the maximum number of characters the user can enter into the edit control.
READONLY	TRUE	Determines whether the user can change the text of the edit control.
	FALSE	Determines whether the user can change the text of the edit control.
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Memo

TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WANTRETURNS	TRUE	Determines whether the user can insert return characters into the text.
	FALSE	Determines whether the user can insert return characters into the text.
WANTTABS	TRUE	Determines whether the user can insert tab characters into the text.
	FALSE	Determines whether the user can insert tab characters into the text.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
WORDWRAP	TRUE	Determines whether the edit control inserts soft carriage returns so text wraps at the right margin.
	FALSE	Determines whether the edit control inserts soft carriage returns so text wraps at the right margin.
HIGHLIGHTFOCUS	TRUE	Specifies that the background color can be changed when the focus enters the control.
	FALSE	Specifies that the background color can be changed when the focus enters the control.

Form Controls and Properties		Variable Controls
Control	Property	Value
Variable Controls		
Variable Web Browser		
ALIGN		
	BOTTOM	Determines how the control aligns within its container (parent control).
	LEFT	Determines how the control aligns within its container (parent control).
	NONE	Determines how the control aligns within its container (parent control).
	TOP	Determines how the control aligns within its container (parent control).
	RIGHT	Determines how the control aligns within its container (parent control).
	CLIENT	Determines how the control aligns within its container (parent control).
HEIGHT		
	nnn	Use the Height property to read or change the height of the control.
HINT		
	HINT	Contains the text string that can appear when the user moves the mouse over the control.
LEFT		
	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
SHOWHINT		
	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER		
	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP		
	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP		
	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE		
	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH		
	nnn	Specifies the horizontal size of the control or form in pixels.
SUPPRESSSCRIPTERRORS		
	TRUE	Specifies whether warning or script error messages are suppressed for the control. Depending on the server URLs, users may encounter script errors or warning messages and then are forced to click on the [OK] button to continue.
	FALSE	Specifies whether warning or script error messages are suppressed for the control. Depending on the server URLs, users may encounter script errors or warning messages and then are forced to click on the [OK] button to continue.

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Web Browser

CURRENTURL	value	Use this property to capture the current URL to a variable.
GOURL	value	Use this property to launch a specific URL.
MOVEBACK	TRUE	Specifies whether the Web Browser control moves backward to the previous page in the browser history.
	FALSE	Specifies whether the Web Browser control moves backward to the previous page in the browser history.
MOVEFORWARD	TRUE	Specifies whether the Web Browser control moves forward to the previous page in the browser history.
	FALSE	Specifies whether the Web Browser control moves forward to the previous page in the browser history.
URL	URL	Use this property if you would like to display a different name for the link.
PARSEHTMLCONTENT	TRUE	Specifies the value passed to the control will be treated as HTML content, instead of a URL.
	FALSE	Specifies the value passed to the control will be treated as HTML content, instead of a URL.
_CLICK	Value	<p>Simulates a mouse click on a control on the page (e.g. button, link). This can be used to initiate form submission after filling the HTML input controls.</p> <p>PROPERTY WebBrowser1 "_CLICK ID btnSubmit" "AnyValue"</p> <p>Notes:</p> <ul style="list-style-type: none">. HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.. The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP TAG xxx ID yyy NAME zzz". HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags. <p>The dynamic properties are useful in the following:</p> <ul style="list-style-type: none">. Integrating local data with web sites that do not have an API. Automating web page tasks within R:BASE. Extracting data from web pages

Variable Controls

Variable Web Browser

_VALUE

Value Specifies the value of the HTML control.

```
PROPERTY WebBrowser1 "_VALUE|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_VALUE|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_INNER_HTML

Value Specifies the HTML between the start and end tags of the object. For the object "<p>Text here...</p>", the INNER_HTML is "Text here..."

```
PROPERTY WebBrowser1 "_INNER_HTML|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_INNER_HTML|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Web Browser

_INNER_TEXT

Value Specifies the text between the start and end tags of the object stripping all the tags. For the object "<p>Text here...</p>", the INNER_TEXT is "Text here..."

```
PROPERTY WebBrowser1 "_INNER_TEXT|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_INNER_TEXT|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_OUTER_HTML

Value Specifies the object and its content in HTML. For the object "<p>Text here...</p>", the OUTER_HTML is "<p>Text here...</p>"

```
PROPERTY WebBrowser1 "_OUTER_HTML|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_OUTER_HTML|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

Variable Controls

Variable Web Browser

_OUTER_TEXT

Value Specifies the text of the object. For the object "<p>Text here...</p>", the OUTER_HTML is "Text here... "

```
PROPERTY WebBrowser1 "_OUTER_TEXT|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_OUTER_TEXT|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_ID_LIST

Value Captures a CSV string of element IDs.

```
Get all IDs:  
GETPROPERTY WebBrowser1 "_ID_LIST" "vIDList"  
  
Get IDs of all anchors:  
GETPROPERTY WebBrowser1 "_ID_LIST|TAG A" "vIDList"  
  
Get IDs of all dropdowns:  
GETPROPERTY WebBrowser1 "_ID_LIST|TAG SELECT" "vIDList"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

Variable Controls

Variable Web Browser

_NAME_LIST

Value Captures a CSV string of element Names.

Get all Names:
GETPROPERTY WebBrowser1 "_NAME_LIST" "vNameList"

Get Names of all anchors:
GETPROPERTY WebBrowser1 "_NAME_LIST|TAG A" "vNameList"

Get Names of all dropdowns:
GETPROPERTY WebBrowser1 "_NAME_LIST|TAG SELECT" "vNameList"

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_CUSTOM_LIST

Value Captures a CSV string of element details. Key columns are TAG, ID, NAME, VALUE. At least one of the four columns should be specified. Additional columns can be added; INNER_HTML, INNER_TEXT, OUTER_HTML, OUTER_TEXT, <TagAttribute>. The order of the four required columns is fixed. The optional columns are ordered based on the order in the field list.

GETPROPERTY WebBrowser1 "_CUSTOM_LIST|FIELDS ID,VALUE" "vIDValuePairs"
GETPROPERTY WebBrowser1 "_CUSTOM_LIST|FIELDS ID,SRC|TAG IMG" "vImageList"

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

Variable Controls

Variable E-Mail Label

WORDWRAP

- TRUE

Specifies whether the label text wraps when it is too long for the width of the label.
- FALSE

Specifies whether the label text wraps when it is too long for the width of the label.

CONDENSECAPTION

- Value

Specifies how the contents of the text is displayed in situations where the text is too long for the display area.
- Options:
- . None

. AtEnd

. WithinPath
- When set to AtEnd, if the Caption does not fit within the control's bounds, the end of the string is replaced with an ellipsis (...). When set to WithinPath, the Caption is condensed so that the start and end of the path string is displayed within the bounds of the control.

LAYOUT

- CENTER

Specifies how the text of the label is placed within the client rectangle of the label control.
- TOP

Specifies how the text of the label is placed within the client rectangle of the label control.
- BOTTOM

Specifies how the text of the label is placed within the client rectangle of the label control.

BLINKCOLOR

- Value

This property determines the color the Caption of the component is drawn in when Blink State is on.
- Available Values:
- AQUA

BLACK

BLUE

CREAM

DARK GRAY

FUCHSIA

GRAY

GREEN

LIME

LIGHT GRAY

MAROON

MEDIUM GRAY

MINT GREEN

NAVY

OLIVE

PURPLE

Control	Property	Value
---------	----------	-------

Variable Controls

Variable E-Mail Label

ROTATION

- CURVE

Determines how the label is rotated. When Rotation is set to Curve, the label is displayed along the curve defined by the bounding rectangle.

The CenterPoint property can be used to alter the curve.
- FLAT

Determines how the label is rotated. When set to Flat, the label is rotated within the center of the bounding rectangle at the angle specified in the Angle property.
- NONE

Determines how the label is rotated. When Rotation is set to None, no rotation is performed.

SHADOWCOLOR

- Value

Specifies the shadow color used in the 3D text styles.

SHADOWDEPTH

- nnn

Specifies how far down and to the right the shadow text will be displayed from the main text. This property is only applicable when "Text Style" is set to Shadow.

SHOWACCELCHAR

- TRUE

Specifies if the text will display letter underscoring for a keyboard shortcut (hot key) when the ampersand (&) character is added to the caption.
- FALSE

Specifies if the text will display letter underscoring for a keyboard shortcut (hot key) when the ampersand (&) character is added to the caption.

ANGLE

- nnn

Specifies the angle used to rotate the label.

CENTERPOINT

- Value

Specifies the origin of the curve used when drawing the label, and when the Rotation is set to Curve.

The center position can be any one of the nine locations defined by the bounding rectangle:

UpperLeft

UpperCenter

UpperRight

LeftCenter

Center

RightCenter

LowerLeft

LowerCenter

LowerRight

CC

- Value

Use the property to specify the carbon copy string for the message.

BCC

- Value

Use the property to specify the blind carbon copy string for the message.

BODYTEXT

- Value

Use the property to specify the body string for the message.

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

Control	Property	Value

Control	Property	Value
---------	----------	-------

Variable Controls
Variable Image

STRETCH	TRUE	Indicates whether the image should be changed so that it exactly fits the bounds of the image control. Set Stretch to TRUE to cause the image to assume the size and shape of the image control. When the image control resizes, the image resizes also. Stretch resizes the height and width of the image independently. Thus, unlike a simple change in magnification, Stretch can distort the image if the image control is not the same shape as the image.
	FALSE	Indicates whether the image should be changed so that it exactly fits the bounds of the image control. Set Stretch to TRUE to cause the image to assume the size and shape of the image control. When the image control resizes, the image resizes also. Stretch resizes the height and width of the image independently. Thus, unlike a simple change in magnification, Stretch can distort the image if the image control is not the same shape as the image.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
TRANSPARENT	TRUE	Specifies whether the background of the image obscures objects below the image object.
	FALSE	Specifies whether the background of the image obscures objects below the image object.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
COPYTOCLIPBOARD	TRUE	Copies the image to the Windows Clipboard. Example: PROPERTY ImageComponentID CopyToClipboard 'TRUE' RETURN
	FALSE	Copies the image to the Windows Clipboard. Example: PROPERTY ImageComponentID CopyToClipboard 'FALSE' RETURN
LoadImageFromFile	FILENAME	Loads/Updates/Refreshes the Variable Image Control from a image file. Example: PROPERTY ImageComponentID LoadImageFromFile .vFileName

Control	Property	Value
---------	----------	-------

Variable Image

FORCEOPAQUE	<div><div>TRUE</div><div>Forces a non-transparent image display, which removes flickering when images are refreshed</div></div> <div><div>FALSE</div><div>Forces a non-transparent image display, which removes flickering when images are refreshed</div></div>
IMAGEHEIGHT	<div><div>VarName</div><div>Captures the image height.</div><div>GETPROPERTY ImageCtrl IMAGEHEIGHT 'vImgHeight'</div><div>Use with the GETPROPERTY command only.</div></div>
IMAGEWIDTH	<div><div>VarName</div><div>Captures the image width.</div><div>GETPROPERTY ImageCtrl IMAGEWIDTH 'vImgWidth'</div><div>Use with the GETPROPERTY command only.</div></div>
SaveImageToFile	<div><div>VarName</div><div>Specifies to save an image to a file.</div><div>PROPERTY DBImage SaveImageToFile VarName</div></div>
CaptureFromVideo	<div><div>TRUE</div><div>The CaptureFromVideo parameter will display a dialog window to take a picture from any Windows camera.</div><div>Notes:<div><div>. The variable for the control must use the VARBIT data type.</div><div>. The control cannot be set to read only.</div></div></div></div>

CaptureFromVideoEx		
Format Width Height Timeout Display'	<p>The CaptureFromVideoEx parameter will display a dialog window to take a picture from any Windows camera. The "Ex" in CaptureFromVideoEx signifies the expanded functionality to capture an image by accepting an image format type, maximum width, and maximum height, along with the automated options to capture a picture after a specified wait time and whether or not to show the camera dialog. The maximum width, maximum height, timeout, and dialog display values are optional.</p> <p>Syntax:</p> <pre>PROPERTY ComponentID CapturefromVideoEx '<Format> <MaximumWidth> <MaximumHeight> <TimeoutInMs> <SHOW_CAMERA HIDE_CAMERA>'</pre> <p><Format> - specifies the image format. Valid formats for the image type are BMP, JPG, and PNG. The default is BMP.</p> <p><MaximumWidth> - specifies the maximum image width</p> <p><MaximumHeight> - specifies the maximum image height</p> <p><TimeoutInMs> - specifies the auto-click wait time in milliseconds. The default is zero.</p> <p><SHOW_CAMERA HIDE_CAMERA> - specifies to show or hide the camera. The default is SHOW_CAMERA.</p> <p>Please note that the possible numeric dimension portions of the parameters are a "maximum" value, and not the target value. If the width of the source is smaller, then that size will be used. If the width of the source is larger, then it will be resized to the specified maximum width. If no numeric parameter is passed, then no resizing will occur.</p> <p>The ability to individually specify a maximum width or maximum height, or both, provides the ability to resize the image so that the final image fits inside the given dimension while preserving the aspect ratio. Depending on the specified value pair, sometimes the width will be the limiting factor, and sometimes it will be the height.</p> <p>Examples:</p> <p>To capture a JPG image with a maximum width of 350 pixels use the following:</p> <pre>PROPERTY EmployeePhoto CapturefromVideoEx 'JPG 350'</pre> <p>To capture a JPG image, and keep whatever size the source provides, use the following:</p> <pre>PROPERTY EmployeePhoto CapturefromVideoEx 'JPG'</pre> <p>If you wish to capture a PNG image with a maximum height of 200 pixels, use the following:</p> <pre>PROPERTY EmployeePhoto CaptureFromVideoEx 'PNG 0 200'</pre> <p>If you wish to capture a PNG image with a maximum width and height of 100 pixels, use the following:</p> <pre>PROPERTY EmployeePhoto CaptureFromVideoEx 'PNG 100 100'</pre> <p>If you wish to capture a JPG image automatically after two seconds without displaying the camera dialog using a maximum width and height dimensions of 320x240 pixels, use the following:</p> <pre>PROPERTY EmployeePhoto CaptureFromVideoEx 'JPG 320 240 2000 HIDE_CAMERA'</pre>	

Form Controls and Properties		Variable Controls
Control	Property	Value
<div>Variable Controls</div> <div>Variable Image</div>		
CaptureFromVideoEx		<p>Notes:</p> <ul style="list-style-type: none"> . The variable for the control must use the VARBIT data type. . After the device is selected, the supported resolutions are listed in a dropdown on the right. If a dimension is specified with CaptureFromVideoEx, the resolution size options are hidden. If no size option is specified, then the dropdown will be displayed. . The control cannot be set to read only.
DEVI CECAMERAS		
	Value	Returns a comma separated list of attached camera devices.
DEFAULTCAMERA		
	Value	Sets the active camera for taking a picture.
	PROPERTY	ImageCtrl DefaultCamera .vCamera
		The GETPROPERTY command returns the last camera used to take a picture. If a picture has not been taken yet, this returns the first devices detected.
		GETPROPERTY ImageCtrl DefaultCamera vCamera
DEFAULTRESOLUTION		
	Value	Sets the default resolution for the active camera.
	PROPERTY	ImageCtrl DefaultResolution .vCameraRes
		The GETPROPERTY command returns the default resolution of the camera.
		GETPROPERTY ImageCtrl DefaultResolution 'vCameraRes'
LOWRESOLUTIONVIEWFINDER		
	TRUE	Specifies the camera capture functionality will use a low-resolution feed for the view finder, but still take a picture using the target resolution. The option makes the camera more responsive. Note that when this property is checked (True), there will be a slight pause in the view finder when the picture is taken. This is because the camera will reset to the target resolution and take the actual picture.
	FALSE	Specifies the camera capture functionality will use a low-resolution feed for the view finder, but still take a picture using the target resolution. The option makes the camera more responsive. Note that when this property is checked (True), there will be a slight pause in the view finder when the picture is taken. This is because the camera will reset to the target resolution and take the actual picture.
PHOTOCAPTURED		
	VarName	Checks to verify if a photo was captured successfully. The property should be used after using CaptureFromVideoEx. The returned value is True/False.
DEVI CECAMERACOUNT		
	VarName	Captures the number of camera devices that can be detected.
CHECKCAMERAACCESS[nn]		
	VarName	Tests if a camera can be accessed using a zero-based index on the camera.
		Example:
		GETPROPERTY EmployeePhoto 'CheckCameraAccess[0]' vCameraAccess

Control	Property	Value

Variable Controls

Variable Radio Button

ALIGNMENT

- LEFT

Text is left-justified: Lines all begin at the left edge of the control.
- RIGHT

Text is left-justified: Lines all begin at the left edge of the control.

CAPTION

- CAPTION

Specifies the text string that the Label displays.

Use Caption to specify the text that the Label displays.

To underline a character in a Caption, include the ampersand (&) before the character. This type of character is called an accelerator character.

COLOR

- Value

Specifies the background color of the control.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

ENABLED

- TRUE

Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
- FALSE

Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

TABSTOP		
	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP		
	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
TRANSPARENT		
	TRUE	Specifies whether controls that sit below the label on a form can be seen through the control.
	FALSE	Specifies whether controls that sit below the label on a form can be seen through the control.
VERTICALSPACING		
	nnn	Use this property to specify the number of pixels used between rows of radio buttons in a radio group.
VISIBLE		
	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH		
	nnn	Specifies the horizontal size of the control or form in pixels.

Variable Controls

Variable Radio Group

SET_FOCUS

TRUE

Gives the input focus to the control. If parent form is not the active form, it will become the active form as well.

SET_FOCUS may demonstrate negative effects in some scenarios, as its use steals the focus on a global level. That means, If a control in a non active form gets a SET_FOCUS, the non active form becomes the active form and the control is given the focus. This behavior does not blend well with popup forms (Pop-up Menu, CHOOSE, etc.) that are shown during focus transition.

As such, SET_ACTIVE_CONTROL or DELAYED_SET_ACTIVE_CONTROL is recommended. Please refer to these topics within the "Miscellaneous" category.

Variable Controls

Variable Radio Group

VISUALSTYLE

Value Specifies the general appearance of the control.

Options:

- . Classic
- . WinXP
- . Gradient

The Classic style setting indicates that the control will take on the pre-WinXP style (i.e. classic).

The WinXP style utilizes Windows XP themes (if they are present).

The Gradient style gives the control a more modern appearance.

GROUPSTYLE

Value Determines the appearance of the group box.

Available Options:

- . Standard
- . Custom
- . TopLine
- . Flat
- . Banner
- . Underline

When Custom is selected, the border's appearance is defined by the border properties. When TopLine is selected, only the top border of the group box is displayed. This format is used quite frequently in Microsoft Office applications.

DOUBLEBUFFERED

TRUE Specifies to reduce painting operations (flickering) for the control background by storing an internal bitmap image.

FALSE Specifies to reduce painting operations (flickering) for the control background by storing an internal bitmap image.

CLICKONLYINITEMS

TRUE Specifies a mouse click only registers when the action occurs upon a radio button item. The default is false.

FALSE Specifies a mouse click only registers when the action occurs upon a radio button item. The default is false.

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

Variable Controls

Variable Lookup Combo Box

ENABLED	TRUE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
	FALSE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
FLATBUTTONS	TRUE	This property controls whether or not the buttons embedded in each of these controls appears as a normal 3D button or with the Flat style. When set to True, the buttons appear without any border until the mouse is positioned over the button. For combo boxes, the button appears with a border, when the mouse is positioned anywhere on the control.
	FALSE	This property controls whether or not the buttons embedded in each of these controls appears as a normal 3D button or with the Flat style. When set to True, the buttons appear without any border until the mouse is positioned over the button. For combo boxes, the button appears with a border, when the mouse is positioned anywhere on the control.
FRAMEVISIBLE	TRUE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
	FALSE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
ITEMHEIGHT	nnn	Specifies the height, in pixels, of the items in the drop-down list.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
MAXLENGTH	nnn	Specifies the maximum number of characters the user can type into the edit portion.
REFRESHLIST	TRUE	This property will refresh the item list.
	FALSE	This property will refresh the item list.

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Lookup Combo Box

SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
SHOWLINES	TRUE	This property used for draw the vertical lines in drop-down list.
	FALSE	This property used for draw the vertical lines in drop-down list.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
LISTOPEN	TRUE	Will open drop-down list.
	FALSE	Will close opened drop-down list.
LOOKUPWHERECLAUSE	value	Specifies the "WHERE Clause" for the control.
LSTTABLE	value	Specifies the source table/view name for the control.
LSTFIELD	value	Specifies the Column(s) value to load for the control.
KFLD	value	Specifies the "Source Key Field" for the control.
SUPPRESSPOPUPERRORMESSAGE	TRUE	Use this property to suppress the -ERROR- message when the WHERE clause does not meet the criteria to display Pop-up Menu defined for Variable Edits. Example -- To suppress the error message for un-qualified lookup PROPERTY <VarEditCompID> SuppressPopupErrorMessage 'TRUE' RETURN

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Lookup Combo Box

BEEPONINVALIDKEY	TRUE	Determines if a beep is sounded on an invalid key press.
	FALSE	Determines if a beep is sounded on an invalid key press.
FRAMEHOTTRACK	TRUE	Determines if button can be in the "Up" state when part of a group. Use AllowAllUp with a group of buttons that belong to the same group. Speed buttons belong to the same group if they have the same value on their GroupIndex property. Buttons in the same group behave in a mutually exclusive fashion: when one button in the group is selected (down), all other buttons in the group become unselected (up). If AllowAllUp is True, all of the speed buttons in a group can be unselected at the same time. Clicking the single selected button in the group will deselect that button without selecting another. If AllowAllUp is False, exactly one of the buttons in the group must be selected at any time. Clicking a down button won't return the button to its up state. Changing the value of the AllowAllUp property for one speed button in a group changes the AllowAllUp value for all buttons in the group. Note: If GroupIndex is zero, AllowAllUp has no effect.
	FALSE	Determines if the control switches between Frame Style and Frame Hot Style when mouse is over the control or has focus. When this property is enabled (and Frame Visible is enabled), the frame of the control toggles between the Frame Style and the Frame Hot Style settings. Specifically, when the mouse is positioned over the control or the control has the input focus, the frame is drawn using the Frame Hot Style setting. When the mouse is not positioned over the control and the control does not have the input focus, the frame is drawn using the Frame Style.
	TRUE	Determines if the control switches between Frame Style and Frame Hot Style when mouse is over the control or has focus. When this property is enabled (and Frame Visible is enabled), the frame of the control toggles between the Frame Style and the Frame Hot Style settings. Specifically, when the mouse is positioned over the control or the control has the input focus, the frame is drawn using the Frame Hot Style setting. When the mouse is not positioned over the control and the control does not have the input focus, the frame is drawn using the Frame Style.
	TRUE	Determines whether the user can change the text of the edit control.
	FALSE	Determines whether the user can change the text of the edit control.
ALLOWDROPDOWNWHENREADONLY	TRUE	Specifies if the dropdown menu can be accessed, even if the value is read only.
	FALSE	Specifies if the dropdown menu can be accessed, even if the value is read only.
REQUIREVALUEONFORMCLOSE	TRUE	Specifies the control is checked if it has a value in the form's "On Close" event.
	FALSE	Specifies the control is checked if it has a value in the form's "On Close" event.

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Lookup Combo Box

VALUEISREQUIREDMESSAGE

Text

Specifies the displayed message if REQUIREVALUEONEXIT or REQUIREVALUEONFORMCLOSE is True, and a value is not entered/specified for the control.

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Lookup List Box

ALIGN

- BOTTOM** Determines how the control aligns within its container (parent control).
- LEFT** Determines how the control aligns within its container (parent control).
- NONE** Determines how the control aligns within its container (parent control).
- TOP** Determines how the control aligns within its container (parent control).
- RIGHT** Determines how the control aligns within its container (parent control).
- CLIENT** Determines how the control aligns within its container (parent control).

ALIGNMENT

- RIGHT** Text is right-justified: Lines all end at the right edge of the control.
- CENTER** Text is centered in the control.
- LEFT** Text is left-justified: Lines all begin at the left edge of the control.

COLOR

- Value** Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

COLUMNS

- nnn** Specifies the number of columns, in a multi-column list box, that are visible without having to scroll.

Control	Property	Value

FRAMEVISIBLE	<div>TRUE</div> <div>This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties</div> <div>FALSE</div> <div>This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties</div>
HEIGHT	<div>nnn</div> <div>Specifies the vertical size of the control in pixels.</div>
HINT	<div>HINT</div> <div>Contains the text string that can appear when the user moves the mouse over the control.</div>
HORZEXTENT	<div>nnn</div> <div>Use this property to specify the virtual width of the list box. The actual width of a list box is defined by its Width property and border size. The horizontal extent must be larger than the actual width in order to display a horizontal scroll bar.</div>
HORZSCROLLBAR	<div>TRUE</div> <div>When this property is set to True, a horizontal scroll bar will appear in the list box when the HorzExtent is greater than the width of the list box.</div> <div>FALSE</div> <div>When this property is set to True, a horizontal scroll bar will appear in the list box when the HorzExtent is greater than the width of the list box.</div>
ITEMHEIGHT	<div>nnn</div> <div>Specifies the height, in pixels, of the items in the list.</div>
LEFT	<div>nnn</div> <div>Specifies the horizontal coordinate of the left edge of a component relative to its parent.</div>
REFRESHLIST	<div>TRUE</div> <div>This property will refresh the item list.</div> <div>FALSE</div> <div>This property will refresh the item list.</div>

Form Controls and Properties		Variable Controls
Control	Property	Value
Variable Controls		
Variable Lookup List Box		
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
SHOWLINES	TRUE	This property used for draw the vertical lines in list.
	FALSE	This property used for draw the vertical lines in list.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
MAKECLICK	n	Use this property to automatically click on the item number in the control. Syntax: PROPERTY ComponentID MAKECLICK 'n' Where n is the item number in the control to click on.
APPLYSETTINGS	TRUE	Determines if setting changes will be applied.
	FALSE	Determines if setting changes will be applied.
LISTOPEN	TRUE	Will close opened drop-down list.
	FALSE	Will close opened drop-down list.
VARNAME	Value	Specifies the variable assigned to the control.
LSTTABLE	Value	Specifies the source table/view name for the control.
LSTFIELD	Value	Specifies the Column(s) value to load for the control.
KFLD	Value	Specifies the "Source Key Field" for the control.

Form Controls and Properties		Variable Controls
Control	Property	Value
Variable Controls		
Variable Lookup List Box		
LOOKUPWHERECLAUSE	Value	Specifies the "WHERE Clause" for the control.
TEXTVALUE	value	To allow the programmer direct access to the TEXT value within the control.
SELECT_ALL	TRUE	With MultiSelect set to TRUE, this property will select all items and put the value into the control variable.
	FALSE	With MultiSelect set to TRUE, this property will unselect all items and put the value into the control variable.
SHOWHORIZONTALINES	TRUE	Specifies the display of horizontal lines in the control.
	FALSE	Specifies the display of horizontal lines in the control.
ITEMINDEX	nnn	Specifies the ordinal number of the selected item in the control's item list.
ITEMCOUNT	VarName	Represents the number of strings in the list. To be used for the GETPROPERTY command ONLY.
BEEPONINVALIDKEY	TRUE	Determines if a beep is sounded on an invalid key press.
	FALSE	Determines if a beep is sounded on an invalid key press.
SHOWITEMHINTS	TRUE	Determines if hints are displayed for long items. When enabled, if an item is not fully displayed in the list area, a popup hint is displayed containing the full text of the item.
	FALSE	Determines if hints are displayed for long items. When enabled, if an item is not fully displayed in the list area, a popup hint is displayed containing the full text of the item.
USEGRADIENTS	TRUE	Determines if group headings are drawn with gradient fills. When enabled, the group background is drawn using a gradient from the Group Color to the Color of the list box.
	FALSE	Determines if group headings are drawn with gradient fills. When enabled, the group background is drawn using a gradient from the Group Color to the Color of the list box.
ALLOWCHANGES	TRUE	Specifies whether changes are allowed.
	FALSE	Specifies whether changes are allowed.
ZEBRASTRIPE	TRUE	Specifies if the zebra stripe color effect is displayed.
	FALSE	Specifies if the zebra stripe color effect is displayed.
ODDCOLOR	Value	Sets the background color for the odd numbered rows when the zebra stripe property is enabled.

Form Controls and Properties		Variable Controls
Control	Property	Value
<div>Variable Controls</div> <div>Variable Lookup List Box</div>		
EVENCOLOR		<div>Value</div> Sets the background color for the even numbered rows when the zebra stripe property is enabled.
CHECKBOX		<div>TRUE</div> Specifies if a check box column is displayed at the far left of the list <div>FALSE</div> Specifies if a check box column is displayed at the far left of the list
CHECKEDITEMCOUNT		<div>VarName</div> Returns the number of checked items. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used. <div>Example:</div> <pre>GETPROPERTY ListBoxID CHECKEDITEMCOUNT 'vCheckedCount'</pre>
CHECKEDITEMS		<div>VarName</div> Returns comma-separated "key field" values of the checked items. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used. <div>Example:</div> <pre>GETPROPERTY ListBoxID CHECKEDITEMS 'vCheckedItems'</pre>
ITEMS[n]->CHECKED		<div>TRUE</div> Specifies the check status for a specific item in the list. This PROPERTY parameter is used when the "Show Check Boxes" attribute is used. <div>PROPERTY ListBoxID 'ITEMS[11]->CHECKED' 'TRUE'</div> <div>The GETPROPERTY command is used to return the checked status of clicked item. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used. For multi-select list boxes this is the topmost item.</div> <div>GETPROPERTY ListBoxID 'ITEMS[5]->CHECKED' 'vCheckedItem'</div>
REQUIREVALUEONFORMCLOSE		<div>TRUE</div> Specifies the control is checked if it has a value in the form's "On Close" event. <div>FALSE</div> Specifies the control is checked if it has a value in the form's "On Close" event.
VALUEISREQUIREDMESSAGE		<div>Text</div> Specifies the displayed message if REQUIREVALUEONEXIT or REQUIREVALUEONFORMCLOSE is True, and a value is not entered/specified for the control.
MAKERIGHTCLICK		<div>Specifies to fire the "On Right Click" EEP for the control, simulating a mouse right click. The last parameter will accept any value for the PROPERTY command.</div> <div>Syntax:</div> <pre>PROPERTY CustomerList MAKERIGHTCLICK ' '</pre>

Variable Controls

Variable Lookup List Box

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

MULTISELECT

- TRUE

Specifies whether multiple list items can be selected.
- FALSE

Specifies whether multiple list items can be selected.

Control	Property	Value

Variable Controls

Variable Spin Edit

COLOR

Value Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

DECIMALS

nnn Use this property to specify the number of decimal places used by a spin edit when displaying floating point values. (0..255)

ENABLED

TRUE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FALSE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FLATBUTTONS

TRUE This property controls whether or not the buttons embedded in each of these controls appears as a normal 3D button or with the Flat style. When set to True, the buttons appear without any border until the mouse is positioned over the button.

FALSE This property controls whether or not the buttons embedded in each of these controls appears as a normal 3D button or with the Flat style. When set to True, the buttons appear without any border until the mouse is positioned over the button.

Form Controls and Properties		Variable Controls

Form Controls and Properties		Variable Controls
Control	Property	Value
Variable Controls		
Variable User Defined Combo Box		
ENABLED		
	TRUE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
	FALSE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
FLATBUTTONS		
	TRUE	This property controls whether or not the buttons embedded in each of these controls appears as a normal 3D button or with the Flat style. When set to True, the buttons appear without any border until the mouse is positioned over the button. For combo boxes, the button appears with a border, when the mouse is positioned anywhere on the control.
	FALSE	This property controls whether or not the buttons embedded in each of these controls appears as a normal 3D button or with the Flat style. When set to True, the buttons appear without any border until the mouse is positioned over the button. For combo boxes, the button appears with a border, when the mouse is positioned anywhere on the control.
FRAMEVISIBLE		
	TRUE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
	FALSE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
HEIGHT		
	nnn	Specifies the vertical size of the control in pixels.
HINT		
	HINT	Contains the text string that can appear when the user moves the mouse over the control.
ITEMHEIGHT		
	nnn	Specifies the height, in pixels, of the items in the drop-down list.
LEFT		
	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
SHOWHINT		
	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.

Control	Property	Value
---------	----------	-------

Variable Controls

Variable User Defined Combo Box

TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
LISTOPEN	TRUE	Will open drop-down list.
	FALSE	Will close opened drop-down list.
LISTITEMS	LISTITEMS	Can be used to Get/Set ComboBox items. Must be delimited by separator character.
LISTITEMSADD	TEXT	Can be used to add text line to COMBOBOX items-list.
LISTITEMSDELETE	nnn	Can be used for delete nnn item from Items List.
SELECTION	TEXT	Can be used ONLY for GETPROPERTY Command. Can be used for retrieve currently selected item text.
DELIMITER	CHAR	Can be used to Get or Set delimiter character for List Items
LISTCOUNT	nnn	Represent the number of strings in the drop-down list. To be used with GETPROPERTY command ONLY.
ITEMINDEX	nnn	Specifies the ordinal number of the selected item in the control's item list.
LOAD_FROM_FILE	FILENAME	Will load Items list from file.
LISTITEMSCLEAR	TRUE	Will clear the Items list
LISTITEMSREFRESH	TRUE	Will refresh items in the Items List.

Form Controls and Properties		Variable Controls
Control	Property	Value
Variable Controls		
Variable User Defined Combo Box		
SAVE_TO_FILE		
	FILENAME	Will save Items List to file.
LISTITEMSADDDDELIMITEDTEXT		
	TEXT	Will add Items to the List. All Items must be separated by delimiter character.
SHOWHORIZONTALINES		
	TRUE	Specifies the display of horizontal lines in the control.
	FALSE	Specifies the display of horizontal lines in the control.
MAKECLICK		
	n	Use this property to automatically click on the item number in the control.
	Syntax:	
	PROPERTY ComponentID MAKECLICK 'n'	
	Where n is the item number in the control to click on.	
ITEMCOUNT		
	VarName	Represents the number of strings in the list.
	To be used for the GETPROPERTY command ONLY.	
READONLYCOLOR		
	Value	Specifies the background color of the control when set to "read only".
READONLYCOLORONFOCUS		
	TRUE	Enables the "Read-Only" Color if the cursor focus is on the control.
	FALSE	Enables the "Read-Only" Color if the cursor focus is on the control.
ALLOWCHANGES		
	TRUE	Specifies whether changes are allowed.
	FALSE	Specifies whether changes are allowed.
ZEBRASTRIPE		
	TRUE	Specifies if the zebra stripe color effect is displayed.
	FALSE	Specifies if the zebra stripe color effect is displayed.
ODDCOLOR		
	Value	Sets the background color for the odd numbered rows when the zebra stripe property is enabled.
EVENCOLOR		
	Value	Sets the background color for the even numbered rows when the zebra stripe property is enabled.
ALIGNMENT		
	LEFT	Text is left-justified: Lines all end at the left edge of the control.
	CENTER	Text is centered in the control.
	RIGHT	Text is right-justified: Lines all end at the right edge of the control.

Control	Property	Value

Variable Controls

Variable User Defined Combo Box

BEEPONINVALIDKEY	TRUE	Determines if a beep is sounded on an invalid key press.
	FALSE	Determines if a beep is sounded on an invalid key press.
FRAMEHOTTRACK	TRUE	Determines if the control switches between Frame Style and Frame Hot Style when mouse is over the control or has focus. When this property is enabled (and Frame Visible is enabled), the frame of the control toggles between the Frame Style and the Frame Hot Style settings. Specifically, when the mouse is positioned over the control or the control has the input focus, the frame is drawn using the Frame Hot Style setting. When the mouse is not positioned over the control and the control does not have the input focus, the frame is drawn using the Frame Style.
	FALSE	Determines if the control switches between Frame Style and Frame Hot Style when mouse is over the control or has focus. When this property is enabled (and Frame Visible is enabled), the frame of the control toggles between the Frame Style and the Frame Hot Style settings. Specifically, when the mouse is positioned over the control or the control has the input focus, the frame is drawn using the Frame Hot Style setting. When the mouse is not positioned over the control and the control does not have the input focus, the frame is drawn using the Frame Style.
READONLY	TRUE	Determines whether the user can change the text of the edit control.
	FALSE	Determines whether the user can change the text of the edit control.
ALLOWDROPDOWNWHENREADONLY	TRUE	Specifies if the dropdown menu can be accessed, even if the value is read only.
	FALSE	Specifies if the dropdown menu can be accessed, even if the value is read only.
REQUIREVALUEONFORMCLOSE	TRUE	Specifies the control is checked if it has a value in the form's "On Close" event.
	FALSE	Specifies the control is checked if it has a value in the form's "On Close" event.
VALUEISREQUIREDMESSAGE	Text	Specifies the displayed message if REQUIREVALUEONEXIT or REQUIREVALUEONFORMCLOSE is True, and a value is not entered/specified for the control.
MAKEDBLCLICK		Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.
		Syntax: PROPERTY CustomerName MAKEDBLCLICK ' '

ENABLED	TRUE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
	FALSE	Controls whether the control responds to mouse, keyboard, and timer events. Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events. To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
FRAMEVISIBLE	TRUE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
	FALSE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
HORZEXTENT	nnn	Use this property to specify the virtual width of the list box. The actual width of a list box is defined by its Width property and border size. The horizontal extent must be larger than the actual width in order to display a horizontal scroll bar.
HORZSCROLLBAR	TRUE	When this property is set to True, a horizontal scroll bar will appear in the list box when the HorzExtent is greater than the width of the list box.
	FALSE	When this property is set to True, a horizontal scroll bar will appear in the list box when the HorzExtent is greater than the width of the list box.
ITEMHEIGHT	nnn	Specifies the height, in pixels, of the items in the list.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.

Control	Property	Value
---------	----------	-------

Variable Controls

Variable User Defined List Box

TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
LISTITEMS	LISTITEMS	Can be used to Get/Set ListBox items. Must be delimited by separator character.
LISTITEMSADD	TEXT	Can be used to add text line to LISTBOX items-list.
LISTITEMSDELETE	nnn	Can be used for delete nnn item from Items List.
SELECTION	TEXT	Can be used to retrieve currently selected item text.
DELIMITER	CHAR	Can be used to Get or Set delimiter character for List Items
LISTITEMSCLEAR	TRUE	Will clear the items list.
TABWIDTH	nnn	Specifies the size of the tabs in the list box.
ITEMINDEX	nnn	Specifies the ordinal number of the selected item in the control's item list.
LISTCOUNT	nnn	Represent the number of strings in Items list. To be used for GETPROPERTY command ONLY.
LOAD_FROM_FILE	FILENAME	Will load Items list from file.
LISTITEMSREFRESH	TRUE	Will refresh items in the Items List
SCROLLWIDTH	nnn	Specifies the width, in pixels, by which the list box can scroll horizontally. Use ScrollWidth to get or set the logical width of the list box. When ScrollWidth is greater than the client width of the list box, the list box gets a horizontal scrollbar. When ScrollWidth is less than or equal to ClientWidth, the horizontal scrollbar disappears.

Form Controls and Properties		Variable Controls
Control	Property	Value
Variable Controls		
Variable User Defined List Box		
SAVE_TO_FILE		
	FILENAME	Will save Items List to file.
LISTITEMSADDDELIMITEDTEXT		
	TEXT	Will add Items to the List. All Items must be separated by delimiter character.
SELECT		
	value	Can be used to highlight/select the specified item. (WRITEONLY, no support for GETPROPERTY).
		Example:
		PROPERTY <ListBoxComponentID> SELECT 6 Will highlight/select item number 6 in ListBox
UNSELECT		
	value	Can be used to un-highlight/un-select the specified item. (WRITEONLY, no support for GETPROPERTY).
		Example:
		PROPERTY <ListBoxComponentID> UNSELECT 6 Will un-highlight/un-select Item number 6 in ListBox
CHECKINDEX		
	value	Can be used to specify which ListBox Index number will be checked for highlighting.
		Example:
		PROPERTY <ListBoxComponentID> CHECKINDEX 6 Will check item at ListBox Index number 6
SELECTEDSTATE		
	varname	Can be used to check the highlighting state ('TRUE' or 'FALSE') of the CHECKINGINDEX item. (READONLY and only supported for GETPROPERTY command).
		Example:
		GETPROPERTY <ListBoxComponentID> SELECTEDSTATE varname will retrieve the highlighted status of item at ListBox Index item 6
SHOWHORIZONTALINES		
	TRUE	Specifies the display of horizontal lines in the control.
	FALSE	Specifies the display of horizontal lines in the control.
MAKECLICK		
	n	Use this property to automatically click on the item number in the control.
		Syntax:
		PROPERTY ComponentID MAKECLICK 'n'
		Where n is the item number in the control to click on.
ITEMCOUNT		
	VarName	Represents the number of strings in the list.
		To be used for the GETPROPERTY command ONLY.

Control	Property	Value
---------	----------	-------

Variable Controls

Variable User Defined List Box

BEEPONINVALIDKEY	TRUE	Determines if a beep is sounded on an invalid key press.
	FALSE	Determines if a beep is sounded on an invalid key press.
SHOWITEMHINTS	TRUE	Determines if hints are displayed for long items. When enabled, if an item is not fully displayed in the list area, a popup hint is displayed containing the full text of the item.
	FALSE	Determines if hints are displayed for long items. When enabled, if an item is not fully displayed in the list area, a popup hint is displayed containing the full text of the item.
USEGRADIENTS	TRUE	Determines if group headings are drawn with gradient fills. When enabled, the group background is drawn using a gradient from the Group Color to the Color of the list box.
	FALSE	Determines if group headings are drawn with gradient fills. When enabled, the group background is drawn using a gradient from the Group Color to the Color of the list box.
ALLOWCHANGES	TRUE	Specifies whether changes are allowed.
	FALSE	Specifies whether changes are allowed.
ZEBRASTRIPES	TRUE	Specifies if the zebra stripe color effect is displayed.
	FALSE	Specifies if the zebra stripe color effect is displayed.
ODDCOLOR	Value	Sets the background color for the odd numbered rows when the zebra stripe property is enabled.
EVENCOLOR	Value	Sets the background color for the even numbered rows when the zebra stripe property is enabled.
CHECKBOX	TRUE	Specifies if a check box column is displayed at the far left of the list
	FALSE	Specifies if a check box column is displayed at the far left of the list
CHECKEDITEMCOUNT	VarName	Returns the number of checked items. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used. Example: GETPROPERTY ListBoxID CHECKEDITEMCOUNT 'vCheckedCount'
CHECKEDITEMS	VarName	Returns comma-separated "key field" values of the checked items. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used. Example: GETPROPERTY ListBoxID CHECKEDITEMS 'vCheckedItems'

Variable Controls

Variable Lookup List View

FILLLASTCOLUMN	TRUE	This property is only used when RowSelect is set to True and ViewStyle is Report. Under these circumstances, when FillLastColumn is True, the list view will automatically resize the last column so that it fills any extra space left in the client area. This property has no effect if the total width of all columns exceeds the width of the list view control.
	FALSE	This property is only used when RowSelect is set to True and ViewStyle is Report. Under these circumstances, when FillLastColumn is True, the list view will automatically resize the last column so that it fills any extra space left in the client area. This property has no effect if the total width of all columns exceeds the width of the list view control.
FLATSCROLLBARS	TRUE	Specifies whether the list view's scroll bars are flat.
	FALSE	Specifies whether the list view's scroll bars are flat.
FRAMEVISIBLE	TRUE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties.
	FALSE	This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties.
GRIDLINES	TRUE	Determines whether lines are drawn separating items in the list.
	FALSE	Determines whether lines are drawn separating items in the list.
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HIDeselection	TRUE	Determines whether a selected node appears selected when the focus shifts to another control.
	FALSE	Determines whether a selected node appears selected when the focus shifts to another control.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
HOTTRACK	TRUE	Specifies whether list items are highlighted when the mouse passes over them.
	FALSE	Specifies whether list items are highlighted when the mouse passes over them.
HOVERTIME	nnn	Specifies how long the user must pause with the mouse before an item is selected.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
ROWSELECT	TRUE	Determines whether an entire row in the list view can be selected.
	FALSE	Determines whether an entire row in the list view can be selected.

Control	Property	Value

SHOWCOLUMNHEADERS	TRUE	Determines whether the column headers are displayed.
	FALSE	Determines whether the column headers are displayed.
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
SHOWWORKAREAS	TRUE	Determines whether the visual properties of work areas are displayed.
	FALSE	Determines whether the visual properties of work areas are displayed.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.

Variable Controls

Variable Lookup List View

COLUMNS[N]->ALIGNMENT

- CENTER

Specifies the text alignment of the column value.

Syntax:

PROPERTY <ListViewControlCompID> 'COLUMNS[n]->ALIGNMENT' 'value'

Where:

The value for "n" is the column number in the list.
- LEFT

Specifies the text alignment of the column value.

Syntax:

PROPERTY <ListViewControlCompID> 'COLUMNS[n]->ALIGNMENT' 'value'

Where:

The value for "n" is the column number in the list.
- RIGHT

Specifies the text alignment of the column value.

Syntax:

PROPERTY <ListViewControlCompID> 'COLUMNS[n]->ALIGNMENT' 'value'

Where:

The value for "n" is the column number in the list.

COLUMNS[N]->CAPTION

- Value

Specifies the caption of the column value.

Syntax:

PROPERTY ListViewControlCompID 'COLUMNS[n]->CAPTION' 'value'

Where:

The value for "n" is the column number in the list.

COLUMNS[N]->MAXWIDTH

- nnn

Specifies the maximum width of the column.

Syntax:

PROPERTY ListViewControlCompID 'COLUMNS[n]->MAXWIDTH' nnn

Where:

The value for "n" is the column number in the list.

Variable Controls

Variable Lookup List View

CHECKITEM

Value Specifies if a check mark is displayed in a check box. The "key field" value or text string is specified to assign the check mark.

PROPERTY ListView1 CHECKITEM '325'

UNCHECKITEM

Value Specifies if a check mark is removed from a check box. The "key field" value or text string is specified to remove the assigned check mark.

PROPERTY ListView1 UNCHECKITEM '326'

CHECKEDITEMS

Value Specifies if a check mark is displayed in several check boxes. The values to be checked are specified in a comma-separated value string. The "key field" value or text string is specified to assign the check mark. It is also available to assign/remove check marks for all displayed check boxes.

-- places check marks in items 325 and 326
PROPERTY VariableLookupListView1 CHECKEDITEMS '325,326'

-- places check marks in all items
PROPERTY ListView1 CHECKEDITEMS '[ALL]'

-- removes check marks from all items
PROPERTY ListView1 CHECKEDITEMS '[NONE]'

RECREATECOLUMNSAFTERREFRESH

TRUE Specifies if the columns are preserved after the control is refreshed. When TRUE, the columns are cleared then recreated every time the list view contents are refreshed. When FALSE, the columns will be populated only after the first load.

FALSE Specifies if the columns are preserved after the control is refreshed. When TRUE, the columns are cleared then recreated every time the list view contents are refreshed. When FALSE, the columns will be populated only after the first load.

REQUIREVALUEONFORMCLOSE

TRUE Specifies the control is checked if it has a value in the form's "On Close" event.

FALSE Specifies the control is checked if it has a value in the form's "On Close" event.

VALUEISREQUIREDMESSAGE

Text Specifies the displayed message if REQUIREVALUEONEXIT or REQUIREVALUEONFORMCLOSE is True, and a value is not entered/specified for the control.

RESETDRAGITEM

If the Variable Lookup List View control's "Drag List Items" is enabled, this resets the drag initiated within the control. Use this in the destination control's "On Drag Drop" EEP when the item was dragged out of the Variable Lookup List View control.

Example:

```
DELETE ROWS FROM tSelectedValues WHERE CustID = (.vSelectedCustID)
PROPERTY DrivingTableListView REFRESHLIST 'TRUE'
PROPERTY SelectedValuesListView RESETDRAGITEM ' '
PROPERTY SelectedValuesListView REFRESHLIST 'TRUE'
RETURN
```

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Lookup List View

SHOWSELECTEDITEM

- TRUE

Specifies to scroll the current selection into view.
- FALSE

Specifies to scroll the current selection into view.

CHECKEDITEMFGCOLOR

- Value

Specifies the font color of the checked row, when check boxes are displayed.

CHECKEDITEMBGCOLOR

- Value

Specifies the background color of the checked row, when check boxes are displayed.

SYNCcheckboxANDSELECTION

- TRUE

Specifies the check box state and row selection are synchronized. A change in the row selection will update the check boxes and vice versa.
- FALSE

Specifies the check box state and row selection are synchronized. A change in the row selection will update the check boxes and vice versa.

MAKERIGHTCLICK

Specifies to fire the "On Right Click" EEP for the control, simulating a mouse right click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerList MAKERIGHTCLICK ' '

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

Control	Property	Value

Variable Controls

System Variable

ALIGNMENT

- LEFT** Text is left-justified: Lines all begin at the left edge of the control.
- CENTER** Text is centered in the control.
- RIGHT** Text is right-justified: Lines all end at the right edge of the control.

ALIGN

- RIGHT** Right: The control moves to the right side of its parent and resizes to fill the height of its parent. The width of the control is not affected.
- BOTTOM** Bottom: The control moves to the bottom of its parent and resizes to fill the width of its parent. The height of the control is not affected.
- TOP** Top: The control moves to the top of its parent and resizes to fill the width of its parent. The height of the control is not affected.
- LEFT** Left: The control moves to the left side of its parent and resizes to fill the height of its parent. The width of the control is not affected.
- NONE** None: The control remains where it was placed. This is the default value.
- CLIENT** Client: The control resizes to fill the client area of its parent. If another control already occupies part of the client area, the control resizes to fit within the remaining client area.

ANGLE

- nnn** Use this property to specify the angle used to rotate the label.

AUTOSIZE

- TRUE** Use AutoSize to make the label adjust its size automatically so the client area accommodates the height and width of the text. When AutoSize is False, the label is fixed in size. When AutoSize is True, the size of the label readjusts whenever the text changes. The size of the label is also readjusts when the Font property changes.

When WordWrap is True, the width of the label is fixed. If AutoSize is also True, changes to the text cause the label to change in height. When AutoSize is True and WordWrap is False, the font determines the height of the label, and changes to the text cause the label to change in width.
- FALSE** Use AutoSize to make the label adjust its size automatically so the client area accommodates the height and width of the text. When AutoSize is False, the label is fixed in size. When AutoSize is True, the size of the label readjusts whenever the text changes. The size of the label is also readjusts when the Font property changes.

When WordWrap is True, the width of the label is fixed. If AutoSize is also True, changes to the text cause the label to change in height. When AutoSize is True and WordWrap is False, the font determines the height of the label, and changes to the text cause the label to change in width.

BEVELWIDTH

- nnn** Use BevelWidth to specify how wide the inner or outer bevel should be. Do not confuse BevelWidth, which is the width of the bevels, with BorderWidth, which is the space between the bevels.

If both the BevelInner and BevelOuter properties are bvNone, BevelWidth has no effect. To remove both bevels, set the BevelInner and BevelOuter properties to None, rather than setting the BevelWidth to 0, as this involves less overhead when painting.

Variable Controls

System Variable

BLINKCOLOR		<div><div>Value</div><div>This property determines the color the Caption of the component is drawn in when Blink State is on.</div><div>Available Values:</div><div>AQUA BLACK BLUE CREAM DARK GRAY FUCHSIA GRAY GREEN LIME LIGHT GRAY MAROON MEDIUM GRAY MINT GREEN NAVY OLIVE PURPLE RED SILVER SKY BLUE TEAL WHITE YELLOW</div></div>

BLINKINTERVALON		<div><div>nnn</div><div>This property controls how long (in milliseconds) a blinking caption stays in the On BlinkState</div></div>

Variable Controls

System Variable

BORDERCOLOR

Value

Use this property to specify the color used to fill the region between the inner and outer borders.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

BORDERHIGHLIGHT

Value

Use this property to specify the color used when painting highlighted portions of the border.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

Control	Property	Value

Variable Controls
System Variable

BORDERSHADOW

Value	Use this property to specify the color used when painting shadowed portions of the border.
	Available Values:
	AQUA
	BLACK
	BLUE
	CREAM
	DARK GRAY
	FUCHSIA
	GRAY
	GREEN
	LIME
	LIGHT GRAY
	MAROON
	MEDIUM GRAY
	MINT GREEN
	NAVY
	OLIVE
	PURPLE
	RED
	SILVER
	SKY BLUE
	TEAL
	WHITE
	YELLOW

BORDERWIDTH

nnn	Specifies the distance, in pixels, between the outer and inner bevels.
-----	--

CAPTION

CAPTION	Specifies the text string that the Label displays.
	Use Caption to specify the text that the Label displays. To underline a character in a Caption, include the ampersand (&) before the character. This type of character is called an accelerator character.

Control	Property	Value
---------	----------	-------

Variable Controls

System Variable

COLOR

Value Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

ENABLED

TRUE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FALSE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

Variable Controls

System Variable

FLATCOLOR

Value Use this property to specify the color to use in drawing borders set to the Flat style.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

FLYBYCOLOR

Value Use this property to specify the color the label should change to when the mouse is positioned over the label. This property is only used when the FlyByEnabled property is True.

Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

Control	Property	Value
---------	----------	-------

Variable Controls
System Variable

HINT

HINT Contains the text string that can appear when the user moves the mouse over the control.

Use the Hint property to provide a string of help text either as a Help Hint, or as help text on a particular location such as a status bar.

A Help Hint is a box containing help text that appears for a control when the user moves the mouse pointer over the control and pauses momentarily. To set up Help Hints:

Specify the Hint property of each control for which a Help Hint should appear.

Set the ShowHint property of each appropriate control to true, or set the ParentShowHint property of all controls to true and set the ShowHint property of the form to true.

At runtime, set the value of the application's ShowHint property to true.

To show the Hint on a status bar or other location, use the OnHint event handler of the application. The application's OnHint event occurs when the mouse pointer moves over the control.

Specify a hint to be used for both a Help Hint box and by an OnHint handler by specifying two values separated by a | character (the vertical bar "or" symbol). For example,

PROPERTY <ComponentID> HINT 'Name|Enter Name in the edit box'

If Hint contains only one value, the entire string is used as a Help Hint and returned by the GetLongHint function. If a control has no Hint value specified, but its parent control does, the control uses the Hint value of the parent control (as long as the control's ShowHint property is true).

Note: If the application's ShowHint property is false, the Help Hint does not appear, but the OnHint event handler is still called.

LEFT

nnn Specifies the horizontal coordinate of the left edge of a component relative to its parent.

Use the Left property to determine where the left side of the control begins or to reposition the left side of the control.

If the control is contained in another control, the Left and Top properties are relative to the parent control. If the control is contained directly by the form, the property values are relative to the form. For forms, the value of the Left property is relative to the screen in pixels.

LINKTARGET

LINKTARGET File name to start when user click on Static Text. Works only when UseAsLink True

- TEAL
- WHITE
- YELLOW

ENABLED

FALSE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

TRUE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

Form Controls and Properties		Variable Controls
Control	Property	Value
Variable Controls		
Variable Time Picker		
FORMAT	FORMAT	Specify format for date-time string.
	Element	Description
	h	The one- or two-digit hour in 12-hour format.
	hh	The two-digit hour in 12-hour format. Single-digit values are preceded by a zero.
	H	The one- or two-digit hour in 24-hour format.
	HH	The two-digit hour in 24-hour format. Single-digit values are preceded by a zero.
	m	The one- or two-digit minute.
	mm	The two-digit minute. Single-digit values are preceded by a zero.
	t	The one-letter AM/PM abbreviation (that is, AM is displayed as "A").
	tt	The two-letter AM/PM abbreviation (that is, AM is displayed as "AM").
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
READONLY	FALSE	Determines whether the user can change the text of the edit control.
	TRUE	Determines whether the user can change the text of the edit control.
	TRUE	Specifies if the calendar day numbers are displayed.
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	FALSE	Determines if the user can tab to a control.
	TRUE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Time Picker

AUTOSIZE	FALSE	Determines whether the clock will automatically resize.
	TRUE	Determines whether the clock will automatically resize.
BUTTONCOLOR	Value	Specifies the background color of the button.
	Value	Specifies the button text font color.
CAPTIONAM	Value	Specifies the caption for the "AM" radio button.
	Value	Specifies the caption for the "PM" radio button.
CAPTIONCLEAR	Value	Specifies the caption for the "clear changes" button.
	Value	Specifies the caption for the "clear changes" button.
RESTRICTMINUTES	TRUE	Specifies if the minute hand is restricted to 5 minute intervals.
	FALSE	Specifies if the minute hand is restricted to 5 minute intervals.
SHOWCLEARBUTTON	TRUE	Specifies if the "clear changes" button is displayed.
	FALSE	Specifies if the "clear changes" button is displayed.
SHOWTIME	TRUE	Specifies if the time is displayed within a banner on top of the clock.
	FALSE	Specifies if the time is displayed within a banner on top of the clock.
SHOWHOWTOUSEHINT	TRUE	Specifies if the hint, on how to use the time picker, is displayed.
	FALSE	Specifies if the hint, on how to use the time picker, is displayed.
THEMEAWARE	TRUE	Determines whether or not to alter the control based upon Windows operating system themes.
	FALSE	Determines whether or not to alter the control based upon Windows operating system themes.
HOWTOUSEMSG	Value	Specifies a custom "How To Use" message hint.
	Value	Specifies a custom "How To Use" message hint.
MAKEDBLCLICK	Value	Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.
	Syntax:	PROPERTY CustomerName MAKEDBLCLICK ' '

Form Controls and Properties		Variable Controls
Control	Property	Value
Variable Controls		
Advanced Variable Rich Edit		
PLAINTEXT		
	FALSE	Controls whether the rich edit control treats the text as plain text or rich text when streaming to or from a file, variable or database field. To write the rich text in the control to a plain text file, set PlainText to True before streaming the text to a file. To ignore the rich text information encoded in a file, set PlainText to True before streaming the text to the control. To stream in the rich text attributes encoded in a file, or save the encoding of the rich text attributes to a file, set PlainText to False. If the rich text attributes of a file are encoded in some format other than rich text format (RTF), it is necessary to use a converter on the text, even when PlainText is True. Note: Rich edit controls do not directly support streaming. Use the Lines property to stream to or from a file.
	TRUE	Controls whether the rich edit control treats the text as plain text or rich text when streaming to or from a file, variable or database field. To write the rich text in the control to a plain text file, set PlainText to True before streaming the text to a file. To ignore the rich text information encoded in a file, set PlainText to True before streaming the text to the control. To stream in the rich text attributes encoded in a file, or save the encoding of the rich text attributes to a file, set PlainText to False. If the rich text attributes of a file are encoded in some format other than rich text format (RTF), it is necessary to use a converter on the text, even when PlainText is True. Note: Rich edit controls do not directly support streaming. Use the Lines property to stream to or from a file.
READONLY		
	FALSE	Determines whether the user can change the text of the edit control.
	TRUE	Determines whether the user can change the text of the edit control.
SHOWHINT		
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER		
	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP		
	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP		
	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE		
	FALSE	Determines whether the component appears on screen.
	TRUE	Determines whether the component appears on screen.

Form Controls and Properties		Variable Controls
Control	Property	Value
Variable Controls		
Advanced Variable Rich Edit		
WANTRETURNS		
	FALSE	Determines whether the user can insert return characters into the text.
	TRUE	Determines whether the user can insert return characters into the text.
WANTTABS		
	FALSE	Determines whether the user can insert tab characters into the text.
	TRUE	Determines whether the user can insert tab characters into the text.
WIDTH		
	nnn	Specifies the horizontal size of the control or form in pixels.
WORDWRAP		
	TRUE	Determines whether the edit control inserts soft carriage returns so text wraps at the right margin.
	FALSE	Determines whether the edit control inserts soft carriage returns so text wraps at the right margin.
SHOW_EDITOR		
	TRUE	Will bring up the Note/BLOB Field Viewer/Editor with [RTF] tab as default.
	LASTCHAR	Specifies that the cursor will be placed at the end of the existing data paragraph to continue editing.
READONLYCOLOR		
	Value	Specifies the background color of the control when set to "read only".
READONLYCOLORONFOCUS		
	FALSE	Enables the "Read-Only" Color if the cursor focus is on the control.
	TRUE	Enables the "Read-Only" Color if the cursor focus is on the control.
SET_FOCUS		
	TRUE	Gives the input focus to the control. If parent form is not the active form, it will become the active form as well.
		<p>SET_FOCUS may demonstrate negative effects in some scenarios, as its use steals the focus on a global level. That means, if a control in a non active form gets a SET_FOCUS, the non active form becomes the active form and the control is given the focus. This behavior does not blend well with popup forms (Pop-up Menu, CHOOSE, etc.) that are shown during focus transition.</p> <p>As such, SET_ACTIVE_CONTROL or DELAYED_SET_ACTIVE_CONTROL is recommended. Please refer to these topics within the "Miscellaneous" category.</p>
DISABLEDBLCLICK		
	TRUE	Specifies if the ability to double click on the control is disabled.
	FALSE	Specifies if the ability to double click on the control is disabled.
LOAD_FROM_FILE		
	FileName.rtf	Loads a rich text document into the control.
		<p>Example:</p> <pre>PROPERTY TABLE Contact 'EDIT' PROPERTY AdvancedDBRichEdit LOAD_FROM_FILE 'ContactAgreement_638.RTF' PROPERTY AdvancedDBRichEdit SHOW_EDITOR TRUE</pre>

Form Controls and Properties		Variable Controls
Control	Property	Value
<div>Variable Controls</div> <div>Advanced Variable Rich Edit</div>		
SAVE_TO_FILE	FileName.RTF	Saves the control contents to an external RTF file.
WANTSHIFTRETURNS	TRUE	Specifies if the [SHIFT]+[ENTER] keys will start a new paragraph or start a new line inside the paragraph
	FALSE	Specifies if the [SHIFT]+[ENTER] keys will start a new paragraph or start a new line inside the paragraph
HSCROLLVISIBLE	TRUE	Specifies if the horizontal scroll bar is visible
	FALSE	Specifies if the horizontal scroll bar is visible
VSCROLLVISIBLE	FALSE	Specifies if titles appear at the top of the columns in the grid.
	TRUE	Specifies if the vertical scroll bar is visible
	FALSE	Specifies if the vertical scroll bar is visible
DISPLAYFORMAT	Value	<p>Specifies the display format for the control.</p> <p>Examples:</p> <pre>PROPERTY CI_LastUpdate DISPLAYFORMAT 'dddd, mmmm dd, yyyy' PROPERTY CI_UpdateTime DISPLAYFORMAT 'h:nn:ss AM/PM' PROPERTY CI_TotalAmount DISPLAYFORMAT '#,0.00;-#,0.00' PROPERTY CI_FinalCalib DISPLAYFORMAT '#.#,E+00'</pre>
MAKERIGHTCLICK		<p>Specifies to fire the "On Right Click" EEP for the control, simulating a mouse right click. The last parameter will accept any value for the PROPERTY command.</p> <p>Syntax:</p> <pre>PROPERTY CustomerList MAKERIGHTCLICK ' '</pre>
MAKEDBLCLICK		<p>Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.</p> <p>Syntax:</p> <pre>PROPERTY CustomerName MAKEDBLCLICK ' '</pre>

Variable Controls

Advanced Variable Rich Edit

AUTOSCROLLCONTENT

- TRUE

Specifies whether to begin scrolling for the content of the control.

The scrolling may only be assigned (TRUE/FALSE) at runtime with the PROPERTY command.

Use the "Auto-Scroll Interval" setting within the Form Designer to assign the scroll interval (in milliseconds).
- FALSE

Specifies whether to begin scrolling for the content of the control.

The scrolling may only be assigned (TRUE/FALSE) at runtime with the PROPERTY command.

Use the "Auto-Scroll Interval" setting within the Form Designer to assign the scroll interval (in milliseconds).

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Gauge

STYLE->LOOKANDFEEL->KIND'

Value

Specifies the look of the control and how the control visually responds on user actions (focus, mouse move, clicks etc.). Basically Kind determines how the control is painted.

Kind options include:

· Flat

· Standard

· UltraFlat

· Office11

BORDERSTYLE

None

No border is painted around the control.

Default

The border style is specified by the look and feel applied to the control (see the Look and Feel properties).

'SCALES[n]->VISIBLE'

TRUE

Specifies if the scale is displayed. The value of "n" is the scale number.

FALSE

Specifies if the scale is displayed. The value of "n" is the scale number.

'SCALES[n]->STYLENAME'

Value

Specifies the modern appearance style for the control. Option include:

· AfricaSunset

· Classic

· CleanWhite

· DarkNight

· DeepFire

· Disco

· Future

· IceColdZone

· iStyle

· Mechanical

· Military

· Retro

· Smart

· SportCar

· White

· YellowSubmarine

'SCALES[n]->OPTIONSLAYOUT->CENTERPOSITIONTYPE'

Factor

Enables relative scale positioning within the control. The scale's "Center Position Factor X" and "Center Position Factor Y" property values are used to calculate the scale's position within the parent object's area.

Pixels

Enables absolute scale positioning within the control. The "Center Position Factor X" and "Center Position Factor Y" property values specify the absolute distance (in pixels) between the left and top borders of the parent object's area and the scale's center, respectively.

'SCALES[n]->OPTIONSLAYOUT->CENTERPOSITIONX'

nnn

Specifies the absolute horizontal position of the scale's center within the control border.

'SCALES[n]->OPTIONSLAYOUT->CENTERPOSITIONY'

nnn

Specifies the absolute vertical position of the scale's center within the control border.

'SCALES[n]->OPTIONSLAYOUT->CENTERPOSITIONFACTORX'

n.nn

Specifies the relative horizontal position of the scale's center within the control border.

Form Controls and Properties		Variable Controls
Control	Property	Value
<div>Variable Controls</div> <div>Variable Gauge</div>		
'SCALES[n]->OPTIONSLAYOUT->CENTERPOSITIONFACTOR'		
	n.nn	Specifies the relative vertical position of the scale's center within the control border.
'SCALES[n]->OPTIONSLAYOUT->RADIUS'		
	nnn	Specifies the absolute radius of an arc scale.
'SCALES[n]->OPTIONSLAYOUT->RADIUSFACTOR'		
	n.nn	Specifies the relative radius of an arc scale.
'SCALES[n]->OPTIONSLAYOUT->HEIGHT'		
	nnn	Specifies the absolute height of the scale's control border.
'SCALES[n]->OPTIONSLAYOUT->WIDTH'		
	nnn	Specifies the absolute width of the scale's control border.
'SCALES[n]->OPTIONSLAYOUT->HEIGHTFACTOR'		
	n.nn	Specifies the relative height of the scale's control border.
'SCALES[n]->OPTIONSLAYOUT->WIDTHFACTOR'		
	n.nn	Specifies the relative width of the scale's control border.
'SCALES[n]->OPTIONSLAYOUT->STRETCH'		
	TRUE	Specifies whether the scale is stretched to its control border dimensions.
	FALSE	Specifies whether the scale is stretched to its control border dimensions.
'SCALES[n]->OPTIONSVIEW->ANGLESTART'		
	nnn	Specifies the start position corresponding to the maximum value which can be displayed by an arc scale.
'SCALES[n]->OPTIONSVIEW->ANGLEEND'		
	nnn	Specifies the end position corresponding to the maximum value which can be displayed by an arc scale.
'SCALES[n]->OPTIONSVIEW->MINVALUE'		
	n.nn	Specifies the minimum displayed value on the scale.
'SCALES[n]->OPTIONSVIEW->MAXVALUE'		
	n.nn	Specifies the maximum displayed value on the scale.
'SCALES[n]->OPTIONSVIEW->MINORTICKCOUNT'		
	nnn	Specifies the number of tick marks displayed between every two adjacent minor tick marks on a quantitative scale.
'SCALES[n]->OPTIONSVIEW->MAJORTICKCOUNT'		
	nnn	Specifies the number of tick marks displayed between every two adjacent major tick marks on a quantitative scale.
'SCALES[n]->OPTIONSVIEW->SHOWBACKGROUND'		
	TRUE	Specifies whether to display the scale background.
	FALSE	Specifies whether to display the scale background.
'SCALES[N]->OPTIONSVIEW->SHOWFIRSTTICK'		
	TRUE	Specifies whether to display the first tick and value.
	FALSE	Specifies whether to display the first tick and value.

'SCALES[n]->OPTIONSVIEW->DIGITCOUNT'

nnn Specifies the maximum length (in characters) of the digital scale's value string display area.

Control	Property	Value
---------	----------	-------

Variable Controls

Variable Gauge

'SCALES[n]->OPTIONSVIEW->DISPLAYMODE'		
FourteenSegment	Each character display block (section) of the digital scale consists of fourteen bar-shaped segments, and provides a broad selection of displayed characters. In this mode, a digital scale displays both the upper- and lowercase characters identically.	
SevenSegment	Each character display block (section) of the digital scale consists of seven bar-shaped segments. In this case, the scale is unable to display a custom text string, since this mode provides a very limited selection of displayed characters. If the Value string contains non-supported characters, the scale does not display them.	
'SCALES[n]->OPTIONSVIEW->SEGMENTCOLOROFF'		
Value	Specifies the color of the "offline" segments of a digital scale's character display block (section).	
'SCALES[n]->OPTIONSVIEW->SEGMENTCOLORON'		
Value	Specifies the color of the "online" segments of a digital scale's character display block (section).	
'SCALES[n]->OPTIONSVIEW->ALIGNELEMENTS'		
LeftJustify	Specifies how the tick marks and labels are aligned on the linear scale.	
RightJustify	Specifies how the tick marks and labels are aligned on the linear scale.	
'SCALES[n]->OPTIONSVIEW->LABELORIENTATION'		
LeftToRight	Specifies the tick mark and label position on the linear scale layout.	
TopToBottom	Specifies the tick mark and label position on the linear scale layout.	
BottomToTop	Specifies the tick mark and label position on the linear scale layout.	
'SCALES[n]->OPTIONSVIEW->ROTATIONANGLE'		
Minus90	Specifies the linear scale's direction.	
Plus90	Specifies the linear scale's direction.	
0	Specifies the linear scale's direction.	
180	Specifies the linear scale's direction.	
'SCALES[n]->OPTIONSVIEW->SHOWLEVELBAR'		
TRUE	Specifies whether the level bar is displayed within a linear scale.	
FALSE	Specifies whether the level bar is displayed within a linear scale.	
'SCALES[n]->RANGES[n]->COLOR'		
Value	Specifies the color for the range, for circular scales.	
'SCALES[n]->RANGES[n]->VALUESTART'		
n.nn	Specifies the start position of the range bar, for circular scales.	
'SCALES[n]->RANGES[n]->VALUEEND'		
n.nn	Specifies the end position of the range bar, for circular scales.	
'SCALES[n]->RANGES[n]->RADIUSFACTOR'		
n.nn	Specifies the relative radius of the range mark, for circular scales.	
'SCALES[n]->RANGES[n]->CENTERPOSITIONFACTOR'		
n.nn	Specifies the relative center of the range mark, for circular scales.

Variable Controls

Variable Date And Time Edit

'PROPERTIES->KIND'		
Date	Specifies to display a "date only" drop down calendar.	
DateTime	Specifies to display a date and time drop down calendar.	
'PROPERTIES->INPUTKIND'		
Standard	Specifies how user input is validated. Standard input provides no validation, but supports Smart Input Strings.	
Mask	Specifies how user input is validated. Mask provides validation by format, which is obtained from the Edit Format value.	
RegExpr	Specifies how user input is validated. Regular Expression provides validation using regular expressions. The validation format is obtained from the Edit Format value, and supports Smart Input Strings.	
'PROPERTIES->DISPLAYFORMAT'		
Value	Specifies the manner in which the value is formatted when not focused.	
'PROPERTIES->EDITFORMAT'		
Value	Specifies the manner in which the value is formatted when editing.	
'PROPERTIES->ALIGNMENT->HORZ'		
LeftJustify	Specifies to horizontally left justify the text within the control.	
RightJustify	Specifies to horizontally right justify the text within the control.	
Center	Specifies to horizontally center justify the text within the control.	
'PROPERTIES->ALIGNMENT->VERT'		
TopJustify	Specifies to vertically top justify the text within the control.	
BottomJustify	Specifies to vertically bottom justify the text within the control.	
VCenter	Specifies to vertically center justify the text within the control.	
'STYLE->BUTTONTRANSPARENCY'		
Always	A button is always transparent.	
Inactive	A button is drawn when the editor has focus or when the mouse cursor is positioned over the button. Otherwise, the button is transparent.	
HideUnselected	A button is drawn when the editor has focus or when the mouse cursor is positioned over the editor region. Otherwise, the button is invisible.	
HideInactive	A button is drawn only when the editor has focus. Otherwise, the button is invisible.	
None	The buttons are always displayed in a non-transparent fashion.	
'STYLE->POPUPBORDERSTYLE'		
Default	Specifies the popup borders are drawn in the manner in which editor borders are currently painted, which is determined by the Border Style and Hot Track properties.	
Single	Specifies the popup borders are thin.	
Frame3D	Specifies the popup borders are three-dimensional.	
Flat	Specifies the popup borders are flat with a slight three-dimensional effect.	

Variable Controls

Variable Date And Time Edit

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

Control	Property	Value
---------	----------	-------

Additional Controls

Additional Controls

Bit Button

ALIGNMENT

- LEFT** Text is left-justified: Lines all begin at the left edge of the control.
- RIGHT** Text is Right-justified: Lines all begin at the right edge of the control.

CAPTION

- CAPTION** Specifies the caption that appears on the button.
- Use Caption to specify the text string that appears on the button.
- To underline a character in a Caption that appears on the button, include an ampersand (&) before the character. This type of character is called an accelerator character. The user can then select the button by pressing Alt while typing the underlined character. To display an ampersand character in the caption, use two ampersands (&&).

COLOR

- Value** Specifies the background color of the control.
- Available Values:
- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

DEFAULT

- TRUE** If Default is True, the button's On Click event executes when the user presses Enter.
- FALSE** If Default is True, the button's On Click event executes when the user presses Enter.

- 3) Stored Proc. -2
- 4) Predefined function EEP. 0..15

LOAD_GLYPH_FROM_FILE

value Assigns an image for the control.

Example:

```
PROPERTY SpeedBtn LOAD_GLYPH_FROM_FILE 'C:\Images\Continue.bmp'
```

GROUPINDEX

nnn Specifies how a button or several buttons behave when clicked.

When GROUPINDEX is 0, the button behaves independently of all other buttons on the form. When the user clicks such a speed button, the button appears pressed (in its clicked state) and then returns to its normal up state when the user releases the mouse button.

When GROUPINDEX is greater than 0, the button remains selected (in its down state) when clicked by the user. When the user clicks a selected button, it returns to the up state, unless Caption is False. Setting the GROUPINDEX property of a single speed button to a value greater than 0 causes the button to behave as a two-state button when Caption is True.

Speed buttons with the same GROUPINDEX property value (other than 0), work together as a group. When the user clicks one of these buttons, it remains selected until the user clicks another speed button belonging to the same group. Speed buttons used in this way can present mutually exclusive choices to the user.

The option DOWN specifies whether the button is selected (down) or unselected (up). Set DOWN to determine whether a speed button is selected. The DOWN property only applies if the GROUPINDEX property of the button is nonzero.

When GROUPINDEX is greater than 0, set DOWN to TRUE to select a button. When the user clicks on a button in the unselected (up) state, the button is selected and DOWN is set to TRUE. When the user clicks on a button in the selected (down) state, if Caption is True, the button becomes unselected and DOWN is set to FALSE.

At design time, specify which button in a group is the initially selected button by setting the Down property of the selected button to TRUE.

Note: When GROUPINDEX is 0, buttons do not remain in the selected state when clicked.

Example:

```
PROPERTY SpeedButtonTop GROUPINDEX 1000
PROPERTY SpeedButtonFirst GROUPINDEX 1000
PROPERTY SpeedButtonTop DOWN 'TRUE'
PROPERTY SpeedButtonLast DOWN 'FALSE'
```

In the above sample, when the Speed Button using the "SpeedButtonTop" Component ID is down, the Speed Button using the "SpeedButtonFirst" Component ID is also down.

DOWN

TRUE Specifies whether the button is selected (down) or unselected (up).

Set DOWN to determine whether a speed button is selected.

The DOWN property only applies if the GROUPINDEX property of the button is not zero.

FALSE Specifies whether the button is selected (down) or unselected (up).

Set DOWN to determine whether a speed button is selected.

The DOWN property only applies if the GROUPINDEX property of the button is not zero.

Control	Property	Value
---------	----------	-------

Additional Controls

Speed Button

LAYOUT

- GlyphgRight

Specifies the relative position between the defined glyph and the button text.
- GlyphBottom

Specifies the relative position between the defined glyph and the button text.
- GlypgTop

Specifies the relative position between the defined glyph and the button text.
- GlyphLeft

Specifies the relative position between the defined glyph and the button text.

ALLOWALLUP

- TRUE

Determines if button can be in the "Up" state when part of a group.

Use AllowAllUp with a group of buttons that belong to the same group. Speed buttons belong to the same group if they have the same value on their GroupIndex property. Buttons in the same group behave in a mutually exclusive fashion: when one button in the group is selected (down), all other buttons in the group become unselected (up).

If AllowAllUp is True, all of the speed buttons in a group can be unselected at the same time. Clicking the single selected button in the group will deselect that button without selecting another.

If AllowAllUp is False, exactly one of the buttons in the group must be selected at any time. Clicking a down button won't return the button to its up state.

Changing the value of the AllowAllUp property for one speed button in a group changes the AllowAllUp value for all buttons in the group.

Note: If GroupIndex is zero, AllowAllUp has no effect.
- FALSE

Determines if button can be in the "Up" state when part of a group.

Use AllowAllUp with a group of buttons that belong to the same group. Speed buttons belong to the same group if they have the same value on their GroupIndex property. Buttons in the same group behave in a mutually exclusive fashion: when one button in the group is selected (down), all other buttons in the group become unselected (up).

If AllowAllUp is True, all of the speed buttons in a group can be unselected at the same time. Clicking the single selected button in the group will deselect that button without selecting another.

If AllowAllUp is False, exactly one of the buttons in the group must be selected at any time. Clicking a down button won't return the button to its up state.

Changing the value of the AllowAllUp property for one speed button in a group changes the AllowAllUp value for all buttons in the group.

Note: If GroupIndex is zero, AllowAllUp has no effect.

SCROLLSTYLE

- Value

Specifies that the button will be used for scrolling and that an appropriate image is displayed on the button.

Options include:

. None

. Left

. Up

. Right

. Down

SuppressInfoTip

TRUE Suppresses the Info Tips for the control. Info Tips is the internal notification hint that is automatically displayed when the entire text is larger than the actual column width defined for the

ListView Properties.

Example:
-- To Disable Extended Info Tips
PROPERTY <ListViewComponentID> SuppressInfoTip 'TRUE'

FALSE Displays the Info Tips for the control. Info Tips is the internal notification hint that is automatically displayed when the entire text is larger than the actual column width defined for the

ListView Properties.

Example:
-- To Enable Extended Info Tips
PROPERTY <ListViewComponentID> SuppressInfoTip 'FALSE'

FRAMEHOTTRACK

TRUE Enables the frame to adjust when the mouse enters the control. When this property is enabled (and Visible Frame is also set to enabled), the frame of the control toggles between the Frame Style and the Frame Hot Style settings.

Specifically, when the mouse is positioned over the control or the control has the input focus, the frame is drawn using the Frame Hot Style setting. When the mouse is not positioned over the control and the control does not have the input focus, the frame is drawn using the Frame Style.

FALSE Enables the frame to adjust when the mouse enters the control. When this property is enabled (and Visible Frame is also set to enabled), the frame of the control toggles between the Frame Style and the Frame Hot Style settings.

Specifically, when the mouse is positioned over the control or the control has the input focus, the frame is drawn using the Frame Hot Style setting. When the mouse is not positioned over the control and the control does not have the input focus, the frame is drawn using the Frame Style.

Additional Controls

List View

COLUMNS[N]->ALIGNMENT

- RIGHT

Specifies the text alignment of the column value.

Syntax:

PROPERTY <ListViewControlCompID> 'COLUMNS[n]->ALIGNMENT' 'value'

Where:

The value for "n" is the column number in the list.
- CENTER

Specifies the text alignment of the column value.

Syntax:

PROPERTY <ListViewControlCompID> 'COLUMNS[n]->ALIGNMENT' 'value'

Where:

The value for "n" is the column number in the list.
- LEFT

Specifies the text alignment of the column value.

Syntax:

PROPERTY <ListViewControlCompID> 'COLUMNS[n]->ALIGNMENT' 'value'

Where:

The value for "n" is the column number in the list.

COLUMNS[N]->CAPTION

- Value

Specifies the caption of the column value.

Syntax:

PROPERTY ListViewControlCompID 'COLUMNS[n]->CAPTION' 'value'

Where:

The value for "n" is the column number in the list.

COLUMNS[N]->MAXWIDTH

- nnn

Specifies the maximum width of the column.

Syntax:

PROPERTY ListViewControlCompID 'COLUMNS[n]->MAXWIDTH' nnn

Where:

The value for "n" is the column number in the list.

Form Controls and Properties		Additional Controls
Control	Property	Value
Additional Controls		List View
COLUMNS[N]->MINWIDTH		
	nnn	Specifies the minimum width of the column. Syntax: PROPERTY ListViewControlCompID 'COLUMNS[n]->MINWIDTH' nnn Where: The value for "n" is the column number in the list.
COLUMNS[N]->WIDTH		
	nnn	Specifies the width of the column. Syntax: PROPERTY ListViewControlCompID 'COLUMNS[n]->WIDTH' nnn Where: The value for "n" is the column number in the list.
DROPPEDITEMINDEX		
	VarName	Specifies the "item index" for a dropped item when using "Drag and Drop". GETPROPERTY TargetedListViewComponentID DroppedItemIndex VarName This parameter is only available for the GETPROPERTY command.
TOPITEM		
	VarName	Captures the TOPITEM value for the last selected row (item) in the list. TOPITEM is used to determine the first item in the list view that the user can see. TOPITEM reflects how far the list view has been scrolled. GETPROPERTY VarListViewCompID TOPITEM vTopItem This parameter is only available for the GETPROPERTY command.
CURRENTSORT		
	VarName	Specifies the "current sort" for the control. GETPROPERTY ListViewComponentID CURRENTSORT 'vCurrentSort' The resulting variable value for vCurrentSort would be something like "Custid ASC" or "InvoiceDate DESC" This parameter is only available for the GETPROPERTY command.
SELECT_ALL		
	TRUE	With MultiSelect set to TRUE, this property will select all items and put the value into the control variable.
	FALSE	With MultiSelect set to TRUE, this property will unselect all items and put the value into the control variable.
SHOWLINES		
	TRUE	Specifies the display of vertical line separators between items.
	FALSE	Specifies the display of vertical line separators between items.

Form Controls and Properties		Additional Controls
Control	Property	Value
Additional Controls		List View
MAKECLICK		<p>n Use this property to automatically click on the item number in the control.</p> <p>Syntax:</p> <p>PROPERTY ComponentID MAKECLICK 'n'</p> <p>Where n is the item number in the control to click on.</p>
ITEMINDEX		
	nnn	Specifies the ordinal number of the selected item in the control's item list.
ITEMCOUNT		
	VarName	Represents the number of strings in the list.
		To be used for the GETPROPERTY command ONLY.
ALIGNMENT		
	RIGHT	Text is right-justified: Lines all begin at the right edge of the control.
	CENTER	Text is centered in the control.
	LEFT	Text is left-justified: Lines all begin at the left edge of the control.
DRAGITEMSINLIST		
	TRUE	Specifies whether the user can drag and reorder list items.
	FALSE	Specifies whether the user can drag and reorder list items.
MULTISELECT		
	TRUE	Specifies whether multiple list items can be selected.
	FALSE	Specifies whether multiple list items can be selected.
ZEBRASTRIPES		
	TRUE	Specifies if the zebra stripe color effect is displayed.
	FALSE	Specifies if the zebra stripe color effect is displayed.
EVENCOLOR		
	Value	Sets the background color for the even numbered rows when the zebra stripe property is enabled.
ODDCOLOR		
	Value	Sets the background color for the odd numbered rows when the zebra stripe property is enabled.
HEADERDEFAULTDRAWING		
	TRUE	<p>Determines if the header cells are drawn by the control.</p> <p>When enabled (the default), the header area for the columns of the list view will be drawn by the control. This is useful, when you want to hook into the drawing of the header area, but do not want to be responsible for drawing the entire header.</p>
	FALSE	<p>Determines if the header cells are drawn by the control.</p> <p>When enabled (the default), the header area for the columns of the list view will be drawn by the control. This is useful, when you want to hook into the drawing of the header area, but do not want to be responsible for drawing the entire header.</p>

Form Controls and Properties		Additional Controls
Control	Property	Value
Additional Controls		List View
HEADERSORTDISPLAYMODE		
	NONE	Specifies that no sort icon will displayed within the header.
	RIGHTALIGN	Specifies the sort icon will be right aligned within the header.
	LEFTALIGN	Specifies the sort icon will be left aligned within the header.
	RIGHTOFTEXT	Specifies the sort icon will be located to the right of the header text.
COLUMN_SORT		
	FALSE	Specifies whether the control will allow ascending or descending sort by selecting the column headers.
	TRUE	Specifies whether the control will allow ascending or descending sort by selecting the column headers.
COLUMNS[N]->MAKECLICK		
	TRUE	<p>Determines if a mouse click is emulated on the control column header, providing a sort.</p> <p>Example:</p> <p>PROPERTY ListViewComponentID COLUMNS[0]->MAKECLICK 'TRUE'</p> <p>The value of "n" for the column (listed from left to right starting with 0).</p> <p>If 'TRUE', the command will emulate a mouse click on the column.</p>
	FALSE	<p>Determines if a mouse click is emulated on the control column header, providing a sort.</p> <p>Example:</p> <p>PROPERTY ListViewComponentID COLUMNS[0]->MAKECLICK 'TRUE'</p> <p>The value of "n" for the column (listed from left to right starting with 0).</p> <p>If 'TRUE', the command will emulate a mouse click on the column.</p>
CHECKEDROWS		
	VarName	<p>Returns comma-separated "key field" values of the checked items. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used.</p> <p>Example:</p> <p>GETPROPERTY ListViewID 'CHECKEDROWS' vCheckedRows</p>
CHECKEDROWCOUNT		
	VarName	<p>Returns the number of checked items. This GETPROPERTY parameter is used when the "Show Check Boxes" attribute is used.</p> <p>Example:</p> <p>GETPROPERTY ListViewID 'CHECKEDROWCOUNT' vCheckedRowCount</p>

	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
STYLE	value	Values: <div> gbsCategoryView gbsTaskList gbsOutlook </div>
GRADIENTCOLORSTART	Value	Specifies the starting gradient color for the control.
GRADIENTCOLORSTOP	Value	Specifies the stopping gradient color for the control.
GRADIENTCOLORSTYLE	Value	Specifies the gradient color style for the control. <div>Options:</div> <ul style="list-style-type: none"> . System (default) . MSOffice . Custom <p>The option System obtains the gradient color values needed by the control from the current system colors. This value ensures that the control looks appealing regardless of the users current color scheme.</p> <p>The MSOffice option mimics the Microsoft Office 2003 look when XP themes are active (i.e. blue, green, and silver backgrounds for toolbars, etc.). If XP themes are not present, then the control will utilize the System option.</p> <p>The Custom option allows to specify custom start and stop color values for the gradients used in the control.</p>

Control	Property	Value
---------	----------	-------

Additional Controls

Group Bar

VISUALSTYLE

Value Specifies the general appearance of the control.

Options:

- . Classic
- . WinXP
- . Gradient

The Classic style setting indicates that the control will take on the pre-WinXP style (i.e. classic).

The WinXP style utilizes Windows XP themes (if they are present).

The Gradient style gives the control a more modern appearance.

GRADIENTPATH

Value Specifies the direction the gradient fill will flow for the control.

Options include:

- . BottomToTop
- . TopToBottom

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

REQUIREALTONACCELCHAR

- TRUE** For accelerator characters, the property specifies whether pressing the one character is enough to activate that menu option, without having to press the [Alt] key first.
- FALSE** For accelerator characters, the property specifies whether pressing the one character is enough to activate that menu option, without having to press the [Alt] key first.

Additional Controls
Group

BORDERCOLOR

Value	Use this property to specify the color used to fill the region between the inner and outer borders.
	Available Values:
	AQUA
	BLACK
	BLUE
	CREAM
	DARK GRAY
	FUCHSIA
	GRAY
	GREEN
	LIME
	LIGHT GRAY
	MAROON
	MEDIUM GRAY
	MINT GREEN
	NAVY
	OLIVE
	PURPLE
	RED
	SILVER
	SKY BLUE
	TEAL
	WHITE
	YELLOW

CANCLOSE

FALSE	When CanClose is True and Style is CategoryView, the group can be closed. A circle with a chevron appears in this state.
TRUE	When CanClose is True and Style is CategoryView, the group can be closed. A circle with a chevron appears in this state.

CAPTION

CAPTION	Specifies the caption that appears on the button.
	Use Caption to specify the text string that appears on the button.
	To underline a character in a Caption that appears on the button, include an ampersand (&) before the character. This type of character is called an accelerator character. The user can then select the button by pressing Alt while typing the underlined character. To display an ampersand character in the caption, use two ampersands (&&).

Control	Property	Value

Additional Controls

Group

CAPTIONCOLOR

Value Use Caption Color to specify the background color of the caption bar for each group.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

CAPTIONCOLORDEFAULT

Value When Caption Color Default is True, the background color for the group's Caption is determined by the Style selected.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

CAPTIONHEIGHT

nnn Use CaptionHeight to specify the height of the group's Caption bar.

Control	Property	Value
---------	----------	-------

Additional Controls
Group

CAPTIONHOTCOLOR

Value	Use Caption Hot Color to specify the color to be used in displaying the group's Caption text when the mouse is positioned over the group's caption bar.
	Available Values:
	AQUA
	BLACK
	BLUE
	CREAM
	DARK GRAY
	FUCHSIA
	GRAY
	GREEN
	LIME
	LIGHT GRAY
	MAROON
	MEDIUM GRAY
	MINT GREEN
	NAVY

	PURPLE
	RED
	SILVER
	SKY BLUE
	TEAL
	WHITE
	YELLOW

COLORDEFAULT

TRUE	When Color Default is True, the background color of the group's client area is determined by the current setting of the Style property.
FALSE	When Color Default is True, the background color of the group's client area is determined by the current setting of the Style property.

Control	Property	Value
---------	----------	-------

Additional Controls
Group

DIVIDERCOLOR	Value	Use Divider Color to specify the color used to display a divider line between the group's Caption bar and the group's client area. Available Values: AQUA BLACK BLUE CREAM DARK GRAY FUCHSIA GRAY GREEN LIME LIGHT GRAY MAROON MEDIUM GRAY MINT GREEN NAVY OLIVE PURPLE RED SILVER SKY BLUE TEAL WHITE YELLOW
DIVIDERVISIBLE	FALSE	When DividerVisible is True, a divider line appears between the group's Caption Bar and the group's client area.
	TRUE	When DividerVisible is True, a divider line appears between the group's Caption Bar and the group's client area.
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
OPENED	TRUE	This property is True if the group is opened
	FALSE	This property is True if the group is opened
OPENEDHEIGHT	nnn	Use OpenedHeight to specify the height of an open group. When a group contains just items from the Items collection, then the height of the group is calculated automatically. However, if the group contains other controls, then the height of the group can be controlled through the OpenedHeight property.

Control	Property	Value
---------	----------	-------

Additional Controls

Group

SHOWHINT

- FALSE

Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
- TRUE

Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.

SPECIAL

- FALSE

When Special is True, the group is treated as a special group, which means that the background color and font color of the group's caption bar are switched in order to highlight the group.
- TRUE

When Special is True, the group is treated as a special group, which means that the background color and font color of the group's caption bar are switched in order to highlight the group.

TOP

- nnn

Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.

USEGRADIENTS

- TRUE

When UseGradients is set to True (the default), the control will display elements of its interface using a gradient fill.
- FALSE

When UseGradients is set to True (the default), the control will display elements of its interface using a gradient fill.

VISIBLE

- TRUE

Determines whether the component appears on screen.
- FALSE

Determines whether the component appears on screen.

WIDTH

- nnn

Specifies the horizontal size of the control or form in pixels.

ENABLED

- FALSE

Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
- TRUE

Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

Additional Controls

Enhanced Tab Control

ALIGN

- TOP

Determines how the control aligns within its container (parent control).
- BOTTOM

Determines how the control aligns within its container (parent control).
- LEFT

Determines how the control aligns within its container (parent control).
- NONE

Determines how the control aligns within its container (parent control).
- CLIENT

Determines how the control aligns within its container (parent control).
- RIGHT

Determines how the control aligns within its container (parent control).

ALIGNEDTABS

- FALSE

The AlignedTabs property determines whether the tabs in each row are extended to completely fill the row. The default value is False. AlignedTabs is only active when MultiLine = True and automatic sizing is in effect (TabWidth = 0 or TabHeight = 0, depending on current orientation).
- TRUE

The AlignedTabs property determines whether the tabs in each row are extended to completely fill the row. The default value is False. AlignedTabs is only active when MultiLine = True and automatic sizing is in effect (TabWidth = 0 or TabHeight = 0, depending on current orientation).

BACKGROUNDCOLOR

- Value

The Background Color property determines the color of the area outside the tabs and cards. Usually, you will want BackgroundColor to be the same as the color of its parent so the area outside the tabs/cards appears transparent; you can achieve this by setting ParentBackgroundColor to True.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

Form Controls and Properties		Additional Controls
Control	Property	Value
<div>Additional Controls</div> <div>Enhanced Tab Control</div>		
FLATCOLOR	Value	<p>Use Flat Color to specify the color to be used when the control's border is flat--specifically Flat style.</p> <p>Available Values:</p> <p>AQUA BLACK BLUE CREAM DARK GRAY FUCHSIA GRAY GREEN LIME LIGHT GRAY MAROON MEDIUM GRAY MINT GREEN NAVY OLIVE PURPLE RED SILVER SKY BLUE TEAL WHITE YELLOW</p>
FLATCOLORADJUSTMENT	nnn	Use Flat Color Adjustment to lighten or darken the Flat Color used for the border of a control when the border is Flat
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
HOTTRACK	TRUE	Set Hot Track to True to display an additional border around a control when the mouse is positioned over the control.
	FALSE	Set Hot Track to True to display an additional border around a control when the mouse is positioned over the control.

Control	Property	Value
---------	----------	-------

Additional Controls

Enhanced Tab Control

HOTTRACKCOLOR	<div>Value</div> <div>Use Hot Track Color to specify the color to be used when drawing the control in the HotTrack state. That is, when the mouse is positioned over the control.</div> <div>Available Values:</div> <div>AQUA BLACK BLUE CREAM DARK GRAY FUCHSIA GRAY GREEN LIME LIGHT GRAY MAROON MEDIUM GRAY MINT GREEN NAVY OLIVE PURPLE RED SILVER SKY BLUE TEAL WHITE YELLOW</div>
IMAGEMARGIN	<div>nnn</div> <div>The ImageMargin property determines the margin between the tab glyph and the tab caption. Values are in pixels and must be >= 0. The default value is 2. No checks are performed to ensure that the specified value is legitimate (i.e. results in a reasonable looking tab shape) for the current tab width and height -- it is your responsibility to specify values that don't result in weird results, e.g. if a large value is used.</div>
MARGIN	<div>nnn</div> <div>The Margin property determines the leading and trailing margins between the edge of each 'card' and the attached tabs.</div>
MULTILINE	<div>FALSE</div> <div>The MultiLine property determines whether you want to allow multiple lines of tabs (if there are more than will fit in a single line) or restrict the control to a single line of tabs which can be scrolled. The default value is False, i.e. a single line of tabs which can be scrolled.</div> <div>TRUE</div> <div>The MultiLine property determines whether you want to allow multiple lines of tabs (if there are more than will fit in a single line) or restrict the control to a single line of tabs which can be scrolled. The default value is False, i.e. a single line of tabs which can be scrolled.</div>
ROWINDENT	<div>nnn</div> <div>The RowIndent property determines the amount by which successive rows of tabs (after the first) will be indented. Values are in pixels and must be >= 0. The default value is 5. When TabOrientation is Top or Bottom the value is an offset in the horizontal direction, when using Left or Right it is an offset in the vertical direction.</div>

Control	Property	Value
---------	----------	-------

Additional Controls

Enhanced Tab Control

ROWOVERLAP	nnn	The RowOverlap property determines the amount by which successive rows of tabs (after the first) will be overlapped. Values are in pixels and must be >= 0. The default value is 5. When TabOrientation is Top or Bottom the value is an offset in the vertical direction, when using Left or Right it is an offset in the horizontal direction.
SHOWHINT	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
SHOWSHADOW	FALSE	When ShowShadow is set to True, and TabOrientation is Top, the right and bottom sides of the control display a drop shadow.
	TRUE	When ShowShadow is set to True, and TabOrientation is Top, the right and bottom sides of the control display a drop shadow.
TABHEIGHT	nnn	The TabHeight property determines the height of the tabs. Values are in pixels and must be >= 0. The default value is 0 which results in automatic tab sizing, i.e. large enough to accomodate each tab's caption and glyph. Note that TabHeight is always the vertical extent, regardless of the current TabOrientation, e.g. when using toLeft orientation, TabHeight is still the vertical extent even though it could be thought of as the tab's "width" (were the tab not rotated sideways).
TABHINTS	TRUE	The TabHints property determines whether individual hints will be shown for each tab as the mouse cursor is moved over individual tabs. The default value is False. To cause individual hints to be shown you will need to specify a hint for each tab which should have a specific hint. The TabHints property is independent of the current HotTrack setting.
	FALSE	The TabHints property determines whether individual hints will be shown for each tab as the mouse cursor is moved over individual tabs. The default value is False. To cause individual hints to be shown you will need to specify a hint for each tab which should have a specific hint. The TabHints property is independent of the current HotTrack setting.
TABINDEX	nnn	TabIndex identifies the selected tab on a tab control. TabIndex is the index of the tab in the list of labels maintained by the Tabs property. The first (leftmost) tab has a TabIndex of 0, the next has 1, and so on.
TABSTOP	FALSE	Determines if the user can tab to a control.
	TRUE	Determines if the user can tab to a control.
TABWIDTH	nnn	The TabWidth property determines the width of the tabs. Values are in pixels and must be >= 0. The default value is 0 which results in automatic tab sizing, i.e. large enough to accomodate each tab's caption and glyph. Note that TabWidth is always the horizontal extent, regardless of the current TabOrientation, e.g. when using Left orientation, TabWidth is still the horizontal extent even though it could be thought of as the tab's "height" (were the tab not rotated sideways).

Form Controls and Properties		Additional Controls
Control	Property	Value
<div>Additional Controls</div> <div>Enhanced Tab Control</div>		
TOP		
	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
TRANSPARENT		
	FALSE	When this property is set to True, the background behind the control shows through.
	TRUE	When this property is set to True, the background behind the control shows through.
USECOLOREDTABS		
	FALSE	Use Colored Tabs property to determine whether the color of each tab is derived from the color value for each tab (in the tab's information) or from the color of the control.
	TRUE	The Use Colored Tabs property determines whether the color of each tab is derived from the color value for each tab (in the tab's information) or from the color of the control.
USEGRADIENTS		
	TRUE	When UseGradients is set to True (the default), the control will display elements of its interface using a gradient fill.
VISIBLE		
	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH		
	nnn	Specifies the horizontal size of the control or form in pixels.
ACTIVEPAGEINDEX		
	nn	ActivePageIndex specifies the page currently displayed by the page control.
		The value of ActivePageIndex identifies a page in the Pages property array. Setting ActivePageIndex to a value that is out of bounds (less than 0 or greater than PageCount - 1) results in the page control having no active page.
BOLDCURRENTTAB		
	TRUE	Specifies if the current tab's caption is drawn in boldface font.
	FALSE	Specifies if the current tab's caption is drawn in boldface font.
SOFTCORNERS		
	TRUE	Specifies if tab corners are drawn more rounded.
	FALSE	Specifies if tab corners are drawn more rounded.
SHOWCARDFRAME		
	TRUE	Specifies if a frame is drawn around the client area of the tab control.
	FALSE	Specifies if a frame is drawn around the client area of the tab control.

Additional Controls

Enhanced Tab Control

TABSTYLE

Value Specifies the appearance of the tabs.

Options include:

- . SingleSlant
- . DoubleSlant
- . CutCorner
- . RoundCorners
- . BackSlant

TEXTALIGNMENT

CENTER Specifies the horizontal positioning of the tab captions within the area of each tab's face set aside for caption display. The default value is Left.

The size of the area of the tab's face which is set aside for caption display will depend on the actual tab size, which in turn is based on the size of the largest glyph (of any tab), the size of the largest caption, the size of the caption to be displayed, whether using automatic tab sizing or fixed tab sizing etc.

RIGHT Specifies the horizontal positioning of the tab captions within the area of each tab's face set aside for caption display. The default value is Left.

The size of the area of the tab's face which is set aside for caption display will depend on the actual tab size, which in turn is based on the size of the largest glyph (of any tab), the size of the largest caption, the size of the caption to be displayed, whether using automatic tab sizing or fixed tab sizing etc.

LEFT Specifies the horizontal positioning of the tab captions within the area of each tab's face set aside for caption display. The default value is Left.

The size of the area of the tab's face which is set aside for caption display will depend on the actual tab size, which in turn is based on the size of the largest glyph (of any tab), the size of the largest caption, the size of the caption to be displayed, whether using automatic tab sizing or fixed tab sizing etc.

TEXTALIGNMENTVERTIAL

CENTER Specifies the vertical positioning of the tab captions within the area of each tab's face set aside for caption display. The default value is Top.

The size of the area of the tab's face which is set aside for caption display will depend on the actual tab size, which in turn is based on the size of the largest glyph (of any tab), the size of the largest caption, the size of the caption to be displayed, whether using automatic tab sizing or fixed tab sizing etc.

TOP Specifies the vertical positioning of the tab captions within the area of each tab's face set aside for caption display. The default value is Top.

The size of the area of the tab's face which is set aside for caption display will depend on the actual tab size, which in turn is based on the size of the largest glyph (of any tab), the size of the largest caption, the size of the caption to be displayed, whether using automatic tab sizing or fixed tab sizing etc.

BOTTOM Specifies the vertical positioning of the tab captions within the area of each tab's face set aside for caption display. The default value is Top.

The size of the area of the tab's face which is set aside for caption display will depend on the actual tab size, which in turn is based on the size of the largest glyph (of any tab), the size of the largest caption, the size of the caption to be displayed, whether using automatic tab sizing or fixed tab sizing etc.

Additional Controls

Enhanced Speed Button

CAPTION

CAPTION Specifies the caption that appears on the button.

Use Caption to specify the text string that appears on the button.

To underline a character in a Caption that appears on the button, include an ampersand (&) before the character. This type of character is called an accelerator character. The user can then select the button by pressing Alt while typing the underlined character. To display an ampersand character in the caption, use two ampersands (&&).

EEP

EEP To Use Custom EEP File

```

HOTTRACKCOLOR

Value Specifies the color of the button when the cursor hovers over it.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

NUMGLYPHS

nnn Specifies the number of parts within an image file (1-4).

LOAD_GLYPH_FROM_FILE

value Assigns an image for the control.

Example:

```
PROPERTY ESpeedBtn LOAD_GLYPH_FROM_FILE 'C:\Images\Continue.bmp'
```

GROUPINDEX

nnn Specifies how a button or several buttons behave when clicked.

When GROUPINDEX is 0, the button behaves independently of all other buttons on the form. When the user clicks such a speed button, the button appears pressed (in its clicked state) and then returns to its normal up state when the user releases the mouse button.

When GROUPINDEX is greater than 0, the button remains selected (in its down state) when clicked by the user. When the user clicks a selected button, it returns to the up state, unless Caption is False. Setting the GROUPINDEX property of a single speed button to a value greater than 0 causes the button to behave as a two-state button when Caption is True.

Speed buttons with the same GROUPINDEX property value (other than 0), work together as a group. When the user clicks one of these buttons, it remains selected until the user clicks another speed button belonging to the same group. Speed buttons used in this way can present mutually exclusive choices to the user.

The option DOWN specifies whether the button is selected (down) or unselected (up). Set DOWN to determine whether a speed button is selected. The DOWN property only applies if the GROUPINDEX property of the button is nonzero.

When GROUPINDEX is greater than 0, set DOWN to TRUE to select a button. When the user clicks on a button in the unselected (up) state, the button is selected and DOWN is set to TRUE. When the user clicks on a button in the selected (down) state, if Caption is True, the button becomes unselected and DOWN is set to FALSE.

At design time, specify which button in a group is the initially selected button by setting the Down property of the selected button to TRUE.

Note: When GROUPINDEX is 0, buttons do not remain in the selected state when clicked.

Example:

```
PROPERTY SpeedButtonTop GROUPINDEX 1000
PROPERTY SpeedButtonFirst GROUPINDEX 1000
PROPERTY SpeedButtonTop DOWN 'TRUE'
PROPERTY SpeedButtonLast DOWN 'FALSE'
```

In the above sample, when the Speed Button using the "SpeedButtonTop" Component ID is down, the Speed Button using the "SpeedButtonFirst" Component ID is also down.

DOWN

TRUE Specifies whether the button is selected (down) or unselected (up).

Set DOWN to determine whether a speed button is selected.

The DOWN property only applies if the GROUPINDEX property of the button is not zero.

FALSE Specifies whether the button is selected (down) or unselected (up).

Set DOWN to determine whether a speed button is selected.

The DOWN property only applies if the GROUPINDEX property of the button is not zero.

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

Control	Property	Value
---------	----------	-------

Additional Controls
Link Label

ALIGNMENT

- RIGHT

Text is right-justified: Lines all end at the right edge of the control.
- LEFT

Text is left-justified: Lines all begin at the left edge of the control.
- CENTER

Text is centered in the control.

ALIGN

- LEFT

Left: The control moves to the left side of its parent and resizes to fill the height of its parent. The width of the control is not affected.
- NONE

None: The control remains where it was placed. This is the default value.
- BOTTOM

Bottom: The control moves to the bottom of its parent and resizes to fill the width of its parent. The height of the control is not affected.
- RIGHT

Right: The control moves to the right side of its parent and resizes to fill the height of its parent. The width of the control is not affected.
- CLIENT

Client: The control resizes to fill the client area of its parent. If another control already occupies part of the client area, the control resizes to fit within the remaining client area.
- TOP

Top: The control moves to the top of its parent and resizes to fill the width of its parent. The height of the control is not affected.

ANGLE

- nnn

Use this property to specify the angle used to rotate the label.

AUTOSIZE

- TRUE

Use AutoSize to make the label adjust its size automatically so the client area accommodates the height and width of the text. When AutoSize is False, the label is fixed in size. When AutoSize is True, the size of the label readjusts whenever the text changes. The size of the label is also readjusts when the Font property changes.

When WordWrap is True, the width of the label is fixed. If AutoSize is also True, changes to the text cause the label to change in height. When AutoSize is True and WordWrap is False, the font determines the height of the label, and changes to the text cause the label to change in width.
- FALSE

Use AutoSize to make the label adjust its size automatically so the client area accommodates the height and width of the text. When AutoSize is False, the label is fixed in size. When AutoSize is True, the size of the label readjusts whenever the text changes. The size of the label is also readjusts when the Font property changes.

When WordWrap is True, the width of the label is fixed. If AutoSize is also True, changes to the text cause the label to change in height. When AutoSize is True and WordWrap is False, the font determines the height of the label, and changes to the text cause the label to change in width.

BEVELWIDTH

- nnn

Use BevelWidth to specify how wide the inner or outer bevel should be. Do not confuse BevelWidth, which is the width of the bevels, with BorderWidth, which is the space between the bevels.

If both the BevelInner and BevelOuter properties are bvNone, BevelWidth has no effect. To remove both bevels, set the BevelInner and BevelOuter properties to None, rather than setting the BevelWidth to 0, as this involves less overhead when painting.

Additional Controls
Link Label

HINT

HINT Contains the text string that can appear when the user moves the mouse over the control.

Use the Hint property to provide a string of help text either as a Help Hint, or as help text on a particular location such as a status bar.

A Help Hint is a box containing help text that appears for a control when the user moves the mouse pointer over the control and pauses momentarily. To set up Help Hints:

Specify the Hint property of each control for which a Help Hint should appear.

Set the ShowHint property of each appropriate control to true, or set the ParentShowHint property of all controls to true and set the ShowHint property of the form to true.

At runtime, set the value of the application's ShowHint property to true.

To show the Hint on a status bar or other location, use the OnHint event handler of the application. The application's OnHint event occurs when the mouse pointer moves over the control.

Specify a hint to be used for both a Help Hint box and by an OnHint handler by specifying two values separated by a | character (the vertical bar "or" symbol). For example,

PROPERTY <ComponentID> HINT 'Name|Enter Name in the edit box'

If Hint contains only one value, the entire string is used as a Help Hint and returned by the GetLongHint function. If a control has no Hint value specified, but its parent control does, the control uses the Hint value of the parent control (as long as the control's ShowHint property is true).

Note: If the application's ShowHint property is false, the Help Hint does not appear, but the OnHint event handler is still called.

LEFT

nnn Specifies the horizontal coordinate of the left edge of a component relative to its parent.

Use the Left property to determine where the left side of the control begins or to reposition the left side of the control.

If the control is contained in another control, the Left and Top properties are relative to the parent control. If the control is contained directly by the form, the property values are relative to the form. For forms, the value of the Left property is relative to the screen in pixels.

LINKTARGET

LINKTARGET File name to start when user click on Static Text. Works only when UseAsLink True

Control	Property	Value

Additional Controls
Link Label

SHADOWCOLOR

Value Use this property to specify the shadow color used in the 3D text styles.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

SHADOWDEPTH

nnn Use this property to specify how far down and to the right the shadow text will be displayed from the main text. This property is only applicable when Text Style is set to Shadow.

SHOWACCELCHAR

FALSE Determines how an ampersand in the label text is displayed.

Set ShowAccelChar to True to allow the label to display an underlined accelerator key value. When ShowAccelChar is True, any character preceded by an ampersand (&) appears underlined. If the FocusControl property is set, the windowed control specified by the FocusControl property receives input focus when the user types that underlined character. To display an ampersand when ShowAccelChar is True, use two ampersands (&&) to stand for the single ampersand that is displayed.

Set ShowAccelChar to False to display the label text with all ampersands appearing as ampersands. When ShowAccelChar is False, the value of the FocusControl property is not used.

TRUE Determines how an ampersand in the label text is displayed.

Set ShowAccelChar to True to allow the label to display an underlined accelerator key value. When ShowAccelChar is True, any character preceded by an ampersand (&) appears underlined. If the FocusControl property is set, the windowed control specified by the FocusControl property receives input focus when the user types that underlined character. To display an ampersand when ShowAccelChar is True, use two ampersands (&&) to stand for the single ampersand that is displayed.

Set ShowAccelChar to False to display the label text with all ampersands appearing as ampersands. When ShowAccelChar is False, the value of the FocusControl property is not used.

---------	----------	-------

Additional Controls

Tab Set

TABS->ADD_NEW

Value Adds a new tab to the control.

Syntax:

```
PROPERTY TabSetComponentID TABS->ADD_NEW Value
```

Example:

```
DIALOG 'Enter New Tab Caption:' vTabCaption vEndKey 1 +  
  CAPTION 'New Tab Caption' ICON INFO  
IF vEndKey <> '[ESC]' THEN  
  PROPERTY TabSetCompID TABS->ADD_NEW .vTabCaption  
  CLEAR VAR vTabCaption, vEndKey  
ENDIF  
RETURN
```

Note:

n the the Tab index, using zero as the first tab

TABS->CLEAR

TRUE Clears all tabs.

Syntax:

```
PROPERTY TabSetComponentID TABS->CLEAR Value
```

Example:

```
PROPERTY TabSetCompID TABS->CLEAR 'TRUE'
```

FALSE Clears all tabs.

Syntax:

```
PROPERTY TabSetComponentID TABS->CLEAR Value
```

Example:

```
PROPERTY TabSetCompID TABS->CLEAR 'FALSE'
```

COUNT

VarName Captures the tab count for the control.

Syntax:

```
GETPROPERTY TabControlComponentID TABS->COUNT VarName
```

Example:

```
GETPROPERTY TabSetCompID TABS->COUNT vCount  
PAUSE 2 USING .vCount  
CLEAR VAR vCount  
RETURN
```

Note:

This parameter is only used with the GETPROPERTY command.

Control	Property	Value
---------	----------	-------

Additional Controls

Tab Set

TABTO

VarName Returns the index of the target tab.

Notes:

- . The property is only to be used in the "On Before Tab Change" EEP.
- . The Tab Set control uses a zero-based index for tabs. For example, tabs "Two" and "Four" are indexed as 1 and 3.

Example:

```
-- The following prevents focus to tabs 2 and 4.  
SET VAR vTab TEXT = NULL  
GETPROPERTY TabSetControl1 TABTO vTab  
IF vTab = '1' OR vTab = '3' THEN  
  -- Prevent the tab change  
  PROPERTY TabSetControl1 ALLOWCHANGE FALSE  
ENDIF
```

ALLOWCHANGE

TRUE Specifies if the Tab Set control allows the tab change or not. The default behavior is to allow the change.

The property is only to be used in the "On Before Tab Change" EEP.

Example:

```
-- The following prevents focus to tabs 2 and 4.  
SET VAR vTab TEXT = NULL  
GETPROPERTY TabSetControl1 TABTO vTab  
IF vTab = '1' OR vTab = '3' THEN  
  -- Prevent the tab change  
  PROPERTY TabSetControl1 ALLOWCHANGE FALSE  
ENDIF
```

FALSE Specifies if the Tab Set control allows the tab change or not. The default behavior is to allow the change.

The property is only to be used in the "On Before Tab Change" EEP.

Example:

```
-- The following prevents focus to tabs 2 and 4.  
SET VAR vTab TEXT = NULL  
GETPROPERTY TabSetControl1 TABTO vTab  
IF vTab = '1' OR vTab = '3' THEN  
  -- Prevent the tab change  
  PROPERTY TabSetControl1 ALLOWCHANGE FALSE  
ENDIF
```

Control	Property	Value

Additional Controls

Time Picker

BEVELWIDTH

nnn Use BevelWidth to specify how wide the inner or outer bevel should be.

COLOR

Value Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

ENABLED

TRUE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FALSE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

Additional Controls		
Collapse Panel		
VISUALSTYLE		
	Value	Specifies the general appearance of the control. Options: <ul style="list-style-type: none">. Classic. WinXP. Gradient The Classic style setting indicates that the control will take on the pre-WinXP style (i.e. classic). The WinXP style utilizes Windows XP themes (if they are present). The Gradient style gives the control a more modern appearance.
GRIDXSIZE		
	nnn	Specifies the horizontal separation, in pixels, between grid lines.
GRIDYSIZE		
	nnn	Specifies the vertical separation, in pixels, between grid lines.
COLLAPSED		
	TRUE	Specifies if the panel is initially collapsed.
	FALSE	Specifies if the panel is initially collapsed.
ANIMATION		
	TRUE	Specifies if a gradual expanding/collapsing behavior is used.
	FALSE	Specifies if a gradual expanding/collapsing behavior is used.
HEADERALIGNMENT		
	TOP	Specifies the vertical justification of the text within the panel header.
	BOTTOM	Specifies the vertical justification of the text within the panel header.
	CENTER	Specifies the vertical justification of the text within the panel header.
CAPTIONHEIGHT		
	Value	Specifies the height of the panel header caption.
EXPANDEDHEIGHT		
	Value	Specifies the height of the expanded panel.
HEADERVERTALIGNMENT		
	Center	Specifies the vertical justification of the text within the panel header.
	Bottom	Specifies the vertical justification of the text within the panel header.
	Top	Specifies the vertical justification of the text within the panel header.
PANELDIRECTION		
	EXPANDUP	Specifies the direction for the panel expansion.
	EXPANDDOWN	Specifies the direction for the panel expansion.

Additional Controls

Count Down Timer

DISPLAYCOMPID	Value	Specifies the Component ID of the control to display the countdown information. Examples of controls to assign the timer to include Static Text, Panel, Enhanced Panel, LED Text Label, Digital Clock, Meter, or any control that has "Text" or "Caption" properties.
TIME	Value	Specifies the start time that is decremented every second
EXECTIMERENDONSTOP	TRUE	Specifies if the "On Count Down End" EEP is executed if the timer is stopped before the timer ends
	FALSE	Specifies if the "On Count Down End" EEP is executed if the timer is stopped before the timer ends
DISPLAYFORMAT	Value	Specifies the display format for the timer
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
HEIGHT	nnn	Use the Height property to read or change the height of the control.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
STARTTIMER	TRUE	Starts the timer for the Count Down Timer control
STOPTIMER	TRUE	Stops the timer for the Count Down Timer control.

Control	Property	Value
---------	----------	-------

Additional Controls

Split View

OPENEDWIDTH	Value	Specifies the object width when opened, in pixels.
COMPACTWIDTH	Value	Specifies the object width when compacted/closed, in pixels.
MENUMODE	TRUE	When true, Menu Mode displays the menu items. Otherwise, the control acts as a container control, similar to the Collapse Panel. The control can still parent other controls even in Menu Mode.
	FALSE	When true, Menu Mode displays the menu items. Otherwise, the control acts as a container control, similar to the Collapse Panel. The control can still parent other controls even in Menu Mode.
HIDEONSTARTUP	TRUE	Specifies whether the control is hidden when the form is first launched.
	FALSE	Specifies whether the control is hidden when the form is first launched.
SPACEBETWEENMENUITEMS	Value	Specifies the space between menu items.
MENUITEMHEIGHT	Value	Specifies the menu item height.
MENUMARGIN	Value	Specifies the margin size.
CAPTIONMARGIN	Value	Specifies the caption margin size.
AUTOSHOWHIDE	FALSE	Specifies to expand/close the control when the mouse cursor enters/leaves the area. The setting is ignored when "Close Style" is set to Collapse.
	TRUE	Specifies to expand/close the control when the mouse cursor enters/leaves the area. The setting is ignored when "Close Style" is set to Collapse.
OPENED	TRUE	Specifies the control is opened.
	FALSE	Specifies the control is closed.
CLOSEAFTERCLICK	TRUE	Specifies to closes the menu if the mouse button is clicked.
	FALSE	Specifies to closes the menu if the mouse button is clicked.
COLOR	Value	Specifies the background color of the control.
PARENTBACKGROUND	TRUE	Specifies to match the background color of the parent control.
	FALSE	Specifies to match the background color of the parent control.

Form Controls and Properties		Additional Controls
Control	Property	Value
Additional Controls		Split View
USEANIMATION	TRUE	Specifies to use a gradual expanding/collapsing behavior.
	FALSE	Specifies to use a gradual expanding/collapsing behavior.
ENABLED	TRUE	Specifies if a menu item on the control is enabled.
	FALSE	Specifies if a menu item on the control is enabled.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, in pixels.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a control, in pixels.
HEIGHT	nnn	Specifies the vertical size of the control, in pixels.
WIDTH	nnn	Specifies the horizontal size of the control, in pixels.
ANIMATIONDELAY	nnn	Specifies the time interval in milliseconds taken to display the speed of the animation. The smaller the Animation Delay value, the faster the animation.
ANIMATIONSTEP	nnn	The number of pixels by which the width of the control is adjusted during each step of the opening and closing animation.
CLOSESTYLE	COLLAPSE	Specifies the control is completely hidden. The "Auto Show/Hide" attribute will not be recognized when set to Collapse. The control must be manually opened/closed using the OPENED property (e.g. PROPERTY SplitView1 OPENED 'TRUE' or PROPERTY SplitView1 OPENED 'FALSE')
	COMPACT	Specifies the width of the control, when closed, is equal to the Compact Width value.
DISPLAYMODE	DOCKED	Specifies the method for the opened behavior, where the control is docked to the left or right edge of the form, and when opened, the client area is reduced by the width of the control.
	OVERLAY	Specifies the method for the opened behavior, where when expended, the control displays on top of the client area of the form.
FULLREPAINT	FALSE	Determines how the split view panel repaints itself when it is resized. When Full Repaint is checked/true, the entire panel, including the beveled border repaints when the size changes. When Full Repaint is unchecked/false, only the area inside the beveled border repaints.
	TRUE	Determines how the split view panel repaints itself when it is resized. When Full Repaint is checked/true, the entire panel, including the beveled border repaints when the size changes. When Full Repaint is unchecked/false, only the area inside the beveled border repaints.

Additional Controls

Tile Menu

'LOOKANDFEEL->KIND'	Value	Specifies the look of the control and how the control visually responds on user actions (focus, mouse move, clicks etc.). Basically Kind determines how the control is painted. Kind options include: <ul style="list-style-type: none">· Flat· Standard· UltraFlat· Office11
'STYLE->CHECKEDITEMCHECKMARKCOLOR'	Value	Specifies the color of check marks displayed in checked tiles.
'STYLE->CHECKEDITEMFRAMECOLOR'	Value	Specifies the color of the frame displayed around checked tiles.
'STYLE->FOCUSEDCOLOR'	Value	Specifies the color of the focus rectangle.
'STYLE->GRADIENT'	ForwardDiagonal	Specifies the gradient fill type for a tile menu element's background.
	BackwardDiagonal	Specifies the gradient fill type for a tile menu element's background.
	Horizontal	Specifies the gradient fill type for a tile menu element's background.
	Vertical	Specifies the gradient fill type for a tile menu element's background.
'STYLE->GRADIENTBEGINCOLOR'	Value	Specifies the start color of a gradient fill or the fill color for a solid filling used for a tile menu element's background.
'STYLE->GRADIENTENDCOLOR'	Value	Specifies the end color of a gradient fill used for a tile menu element's background.
'STYLE->STRETCH'	Stretch	Specifies how an image specified by the texture property fills a tile menu element's background.
	Tile	Specifies how an image specified by the texture property fills a tile menu element's background.
	NoResize	Specifies how an image specified by the texture property fills a tile menu element's background.
'STYLE->FONT->COLOR'	Value	Specifies the base font color of the text.
'STYLE->FONT->NAME'	Value	Specifies the base font typeface for the text.
'STYLE->FONT->SIZE'	nnn	Specifies the base font height of the text in points.

PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'

'OPTIONSDETAILANIMATE->ANIMATIONINTERVAL'

- nnn

Specifies the animation delay (in milliseconds) for detail page navigation. Use this property to specify the delay between switching the active detail page with the navigation from/to the main page or between detail pages.

Control	Property	Value
---------	----------	-------

Additional Controls

Tile Menu

'OPTIONSDETAILANIMATE->ANIMATIONMODE'

- SegmentedFade

Specifies the animation transition effect for detail page navigation.
- Fade

Specifies the animation transition effect for detail page navigation.
- Scroll

Specifies the animation transition effect for detail page navigation.
- RandomSegmentedFade

Specifies the animation transition effect for detail page navigation.

'OPTIONSITEMANIMATE->ANIMATETEXT'

- Value

Specifies if text blocks in a tile are animated along with its background and glyph when showing this tile.

'OPTIONSBEHAVIOR->BACKGROUNDSCROLLSYNC'

- n

Specifies how quickly the tile menu's background can be scrolled when you scroll the tile menu's content. Use this property to connect background and content scrolling using a percentage value of the content scroll speed. This value ranges from 0 (when the tile menu background is static and cannot be scrolled) to 100 (when the background's scroll speed matches the scroll speed of tile menu contents). Note that the background is scrolled only if the Stretch property value is set to No Resize or Tile.

'OPTIONSBEHAVIOR->ITEMCHECKMODE'

- Multiple

Specifies end-users can right-click or swipe down tile items to toggle their checked state (also called selected state). You can access all the tile items that are currently checked within a tile menu via its checked items list.
- None

Specifies that tile items cannot be checked. Switching to this option unchecks all the currently checked tile items, clearing the checked items list.

'OPTIONSBEHAVIOR->ITEMHOTTRACKHIGHLIGHTCOLOR'

- Value

Specifies the color used to highlight a hot-tracked tile item.

'OPTIONSBEHAVIOR->ITEMHOTTRACKMODE'

- None

Controls if end-users can hot-track tile items within a tile menu using the mouse. Hot-tracking a tile item removes the focus indication from the currently focused item, if the "Hide Focus On Item Hot Track" property is checked.

The None setting indicates item hot-tracking is disabled.
- Frame

Controls if end-users can hot-track tile items within a tile menu using the mouse. Hot-tracking a tile item removes the focus indication from the currently focused item, if the "Hide Focus On Item Hot Track" property is checked.

The Frame setting indicates a hot-tracked tile item is emphasized with a frame painted around it (default).
- Highlight

Controls if end-users can hot-track tile items within a tile menu using the mouse. Hot-tracking a tile item removes the focus indication from the currently focused item, if the "Hide Focus On Item Hot Track" property is checked.

The Highlight setting indicates a hot-tracked tile item is highlighted using the color specified via the "Item Hot Track Highlight Color" property.

Control	Property	Value
---------	----------	-------

Additional Controls
Tile Menu

'OPTIONSBEHAVIOR->SCROLLMODE'

ScrollButtons	<p>Specifies how end-users can scroll tile menu contents that are not shown in their entirety.</p> <p>The Scroll Buttons setting indicates that in addition to the default options, the contents can be scrolled by clicking the scroll buttons located within scroll button areas. These areas are four hot zones aligned to the tile menu's edges. Hovering the mouse pointer over any of these areas displays the corresponding scroll button.</p>
ScrollBars	<p>Specifies how end-users can scroll tile menu contents that are not shown in their entirety.</p> <p>The Scrollbars setting indicates that in addition to the default options, the contents can be scrolled using the mouse wheel and the horizontal and/or vertical scrollbar (default).</p>
Default	<p>Specifies how end-users can scroll tile menu contents that are not shown in their entirety.</p> <p>The Default setting indicates the contents can be scrolled using drag operations (by starting the operation on an area free from any tile items and/or groups), taps, and arrow buttons (by navigating tile items).</p>

'OPTIONSBEHAVIOR->FOCUSITEMONCYCLE'

TRUE	Determines whether focus moves to the next/previous row after it passes the rightmost/leftmost tile within the current row.
FALSE	Determines whether focus moves to the next/previous row after it passes the rightmost/leftmost tile within the current row.

'OPTIONSBEHAVIOR->GROUPMOVING'

TRUE	Controls if end-users can re-arrange entire tile groups within a tile menu using drag and drop.
FALSE	Controls if end-users can re-arrange entire tile groups within a tile menu using drag and drop.

'OPTIONSBEHAVIOR->HIDEFOCUSONITEMHOTTRACK'

TRUE	Specifies if hot-tracking a tile item removes the focus indication from the currently focused item.
FALSE	Specifies if hot-tracking a tile item removes the focus indication from the currently focused item.

'OPTIONSBEHAVIOR->ITEMMOVING'

TRUE	Controls if end-users can re-arrange tile items within a tile menu using drag and drop.
FALSE	Controls if end-users can re-arrange tile items within a tile menu using drag and drop.

'ACTIONBARS->FONT->COLOR'

Value	Specifies the base font color of the action bar items.
-------	--

'ACTIONBARS->FONT->NAME'

Value	Specifies the base font typeface for the action bar items.
-------	--

'ACTIONBARS->FONT->SIZE'

nnn	Specifies the height of the action bar items.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
- Italic

Removes the italic style from the base font text.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
- +Underline

Applies the underline style to the base font text.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
- Underline

Removes the underline style from the base font text.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
- +StrikeOut

Applies the strikeout style to the base font text.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
- StrikeOut

Removes the strikeout style from the base font text.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
- +Italic

Applies the italic style to the base font text.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'
- Bold

Removes the bold style from the base font text.

The following applies the bold and italic font styles, and removes underline:
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'

'ACTIONBARS->COLOR'

- Value

Specifies the background color of action bars.

'ACTIONBARS->INDENTHORZ'

- nnn

Specifies the space (in pixels) between the left and right edges of an action bar and its visible items.

Form Controls and Properties		Additional Controls
Control	Property	Value
<div> <div>Additional Controls</div> <div>Tile Menu</div> </div>		
'ACTIONBARS->INDENTVERT'	nnn	Specifies the space between the top and bottom edges of an action.
'ACTIONBARS->ITEMINDENT'	nnn	Specifies the space between visible action bar items, in pixels.
'OPTIONSVIEW->GROUPLAYOUT'	Horizontal	Specifies the control's group layout, where tiles that belong to one group can be arranged in multiple columns. The default value is horizontal.
	Vertical	Specifies the control's group layout, where tiles in a group are always arranged in one column.
'OPTIONSVIEW->GROUPMAXROWCOUNT'	nnn	Specifies the maximum number of rows across which tile items are arranged in tile groups.
'OPTIONSVIEW->GROUPINDENT'	nnn	Specifies the space (in pixels) between visible tile groups. Refer below for the Group Indent/Item Indent relationship.
'OPTIONSVIEW->INDENTHORZ'	nnn	Specifies the space (in pixels) between the content of a tile menu and its left and right edges.
'OPTIONSVIEW->INDENTVERT'	nnn	Specifies the space between visible tile groups and the top and bottom edges of a tile menu.
'OPTIONSVIEW->ITEMHEIGHT'	nnn	Specifies a regular tile item's height.
'OPTIONSVIEW->ITEMWIDTH'	nnn	Specifies a regular tile item's width.
'OPTIONSVIEW->ITEMINDENT'	nnn	<p>Specifies the space (in pixels) between the Group Caption and the space occupied tiles in a group.</p> <p>The Group Indent and Item Indent properties work hand and hand to specify object spacing. Group Indent specifies the space between visible tile groups (default = 56). Item Indent specifies the space between the Group Caption and the space occupied tiles in a group (default = 8). With the two, an internal Virtual Group Width is maintained with the following formula:</p> $\text{VirtualGroupWidth} = (\text{GoupIndent} - (2 * \text{ItemIndent}))$ <p>The Virtual Group Width value is calculated every time Item Indent and Group Indent are changed, and the Virtual Group Width must always be higher than Item Indent.</p>
'OPTIONSVIEW->CENTERCONTENTHORZ'	TRUE	Horizontally centers a tile menu's main page content.
	FALSE	Horizontally centers a tile menu's main page content.
'OPTIONSVIEW->CENTERCONTENTVERT'	TRUE	Vertically centers a tile menu's main page content.
	FALSE	Vertically centers a tile menu's main page content.

Control	Property	Value
---------	----------	-------

Additional Controls

Tile Menu

'OPTIONSVIEW->FIXEDINDENTHORZ'	TRUE	Applies the margin between the content of a tile menu and its visible left and right edges.
	FALSE	Applies the margin between the content of a tile menu and its visible left and right edges.
'OPTIONSVIEW->FIXEDINDENTVERT'	TRUE	Applies the margin between the content of a tile menu and its visible top and bottom edges.
	FALSE	Applies the margin between the content of a tile menu and its visible top and bottom edges.
MAPTABLENAME	Value	Specifies the table/view to base the tile group and tile properties.
MAPWHERE	Value	Specifies the WHERE Clause for the field mapping.
MAPCAPTION	Value	Specifies the tile group caption, and maps the tile group Caption property to the corresponding table column.
MAPALIGNMENT	Value	Specifies the horizontal justification of the text within the tile group header, and maps the tile group Alignment property to the corresponding table column.
MAPCOLOR	Value	Specifies the background color for the tile group, and maps the tile group Color property to the corresponding table column.
MAPTILEID	Value	Specifies the tile ID, mapping to the corresponding unique ID column in a table/
MAPSIZE	Value	Specifies the tile size, and maps the tile Size property to the corresponding table column. The value should be one of the following: Small - a small tile item is about half the size of a regular item Regular - a regular tile item whose height and width is defined by the Item (Height, Width) properties, and is common to all tile items Large - specifies an item which is twice as wide as a regular tile item Extra Large - specifies a large item that occupies two rows
MAPROWCOUNT	Value	Specifies the number of rows that the tile item occupies, and maps the tile Row Count property to the corresponding table column.
MAPTEXT1CAPTION	Value	Specifies the caption for the text 1 area (top left corner), and maps the tile Text 1 Caption property to the corresponding table column.
MAPTEXT2CAPTION	Value	Specifies the caption for the text 2 area (top right corner), and maps the tile Text 2 Caption property to the corresponding table column.

Control	Property	Value
---------	----------	-------

Additional Controls

Tile Menu

MAPTEXT3CAPTION	Value	Specifies the caption for the text 3 area (bottom left corner), and maps the tile Text 3 Caption property to the corresponding table column.
MAPTEXT4CAPTION	Value	Specifies the caption for the text 4 area (bottom right corner), and maps the tile Text 4 Caption property to the corresponding table column.
MAPBORDERCOLOR	Value	Specifies the tile border color, and maps the tile Border Color property to the corresponding table column.
MAPGRADIENTSTYLE	Value	Specifies the gradient fill type for the tile's background; Horizontal, Vertical, Forward Diagonal, Backward Diagonal, and maps the tile Gradient Style property to the corresponding table column.
MAPCOLORSTART	Value	Specifies the start color of a gradient fill or the fill color for a solid filling used for the tile's background, and maps the tile Gradient Color Start property to the corresponding table column.
MAPCOLOREND	Value	Specifies the end color of a gradient fill used for the tile's background, and maps the tile Gradient Color End property to the corresponding table column.
MAPGLYPHPOSITION	Value	Specifies the position of the glyph image, and maps the glyph Position property to the corresponding table column.
MAPGLYPHALIGNWITHTEXT1	Value	<div>Specifies if the image is linked to a tile's first text block (Text 1) and how they align with each other. Once the image and text block are linked, they are considered a single element. After this, the image's Align, Indent (H, V) properties are applied to the entire element. The setting maps the glyph Align With Text 1 property to the corresponding table column. Values accepted include:</div> <div>None - the image and text block are not linked (Default) Left - the image is linked to the left edge of the text block Top - the image is linked to the top edge of the text block Right - the image is linked to the right edge of the text block Bottom - the image is linked to the bottom edge of the text block</div>
MAPGLYPHIMAGE	Value	Specifies a glyph image to display for the tile, and maps the glyph Image property to the corresponding table column.
MAPGLYPHMODE	Value	Specifies how the image is sized to fit into the tile area; Normal, Stretch, Proportional Stretch, Fit, Fill, and maps the glyph Mode property to the corresponding table column.
MAPCAPTIONFORMAT	Value	Specifies the display format for the tile group caption, which is dynamically mapped to a corresponding table column.
MAPTEXT1CAPTIONFORMAT	Value	Specifies the display format for the caption assigned to the text 1 area (top left corner), which is dynamically mapped to a corresponding table column.

Control	Property	Value
---------	----------	-------

Additional Controls

Tile Menu

MAPTEXT2CAPTIONFORMAT	Value	Specifies the display format for the caption assigned to the text 2 area (top right corner), which is dynamically mapped to a corresponding table column.
MAPTEXT3CAPTIONFORMAT	Value	Specifies the display format for the caption assigned to the text 3 area (bottom left corner), which is dynamically mapped to a corresponding table column.
MAPTEXT4CAPTIONFORMAT	Value	Specifies the display format for the caption assigned to the text 4 area (bottom right corner), which is dynamically mapped to a corresponding table column.
MAPTEXT1CAPTIONFONTNAME	Value	Specifies the font name for the text 1 area (top left corner), and maps the tile Text 1 Font Name property to the corresponding table column.
MAPTEXT1CAPTIONFONTSIZE	Value	Specifies the font size for the text 1 area (top left corner), and maps the tile Text 1 Font Size property to the corresponding table column.
MAPTEXT1CAPTIONFONTCOLOR	Value	Specifies the font color (integer color or text color name) for the text 1 area (top left corner), and maps the tile Text 1 Font Color property to the corresponding table column.
MAPTEXT1CAPTIONFONTSTYLE	Value	<div>Specifies the font style for the text 1 area (top left corner), and maps the tile Text 1 Font Style property to the corresponding table column.</div> <div>The value may contain any combination of B, I, U, and S; representing bold, italic, underline, and strikeout. For example, to specify BOLD and UNDERLINED, set the value as BU.</div>
MAPTEXT2CAPTIONFONTNAME	Value	Specifies the font name for the text 2 area (top right corner), and maps the tile Text 2 Font Name property to the corresponding table column.
MAPTEXT2CAPTIONFONTSIZE	Value	Specifies the font size for the text 2 area (top right corner), and maps the tile Text 2 Font Size property to the corresponding table column.
MAPTEXT2CAPTIONFONTCOLOR	Value	Specifies the font color (integer color or text color name) for the text 2 area (top right corner), and maps the tile Text 2 Font Color property to the corresponding table column.
MAPTEXT2CAPTIONFONTSTYLE	Value	<div>Specifies the font style for the text 2 area (top right corner), and maps the tile Text 2 Font Style property to the corresponding table column.</div> <div>The value may contain any combination of B, I, U, and S; representing bold, italic, underline, and strikeout. For example, to specify BOLD and UNDERLINED, set the value as BU.</div>
MAPTEXT3CAPTIONFONTNAME	Value	Specifies the font name for the text 3 area (bottom left corner), and maps the tile Text 3 Font Name property to the corresponding table column.

PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Bold'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '+Italic'
PROPERTY DBVerticalGrid1 'FONT->STYLE' '-Underline'

AUTOCONTROLTABORDERS

- TRUE

Specifies whether to automatically manage the tab order of controls within the control.
- FALSE

Specifies whether to automatically manage the tab order of controls within the control.

Additional Controls

Layout Manager

AUTOCONTROLALIGNMENT

- TRUE

Specifies the manner in which a linked control is resized within an item. When checked, this property override the property setting for individual layout items. If this property is checked, linked controls in layout items are resized automatically, so that they will be aligned to an item whose caption is the largest (widest or tallest, depending on the item's caption layout) in the layout content. Resizing is performed either horizontally or vertically (depending on the caption layout) and only for the following items:

 - . Items with assigned captions
 - . Items with the matching caption layout
 - . Items with the matching item position (i.e. only those items whose relevant edges are lined up)
 - . Items whose alignment settings and alignment constraints correspond to the item's caption layout

If the property is unchecked, each control is resized individually, based on its item caption.
- FALSE

Specifies the manner in which a linked control is resized within an item. When checked, this property override the property setting for individual layout items. If this property is checked, linked controls in layout items are resized automatically, so that they will be aligned to an item whose caption is the largest (widest or tallest, depending on the item's caption layout) in the layout content. Resizing is performed either horizontally or vertically (depending on the caption layout) and only for the following items:

 - . Items with assigned captions
 - . Items with the matching caption layout
 - . Items with the matching item position (i.e. only those items whose relevant edges are lined up)
 - . Items whose alignment settings and alignment constraints correspond to the item's caption layout

If the property is unchecked, each control is resized individually, based on its item caption.

DRAGDROPMODE

- Default

Dragging a layout element highlights a target layout group and a line within this group representing the drop position.
- MultiChoice

Dragging a layout element displays visual indicators (hot zones) that correspond to all areas available for a drop operation, providing a choice of potential drop positions. Hovering the mouse pointer over any of these hot zones intuitively highlights a target layout group. Dropping the layout element will automatically place it into this layout group.

ENABLED

- TRUE

Specifies the layout group's accessibility to end-users.
- FALSE

Specifies the layout group's accessibility to end-users.

REDRAWONRESIZE

- TRUE

Specifies whether the layout control is repainted, when sizing.
- FALSE

Specifies whether the layout control is repainted, when sizing.

MENUI ITEMS

- +AlignHorz

Specifies if the Horizontal Alignment context menu item is visible, when the end user right clicks on the control.

The following displays the layout direction, caption, and border context menu items, and does not display the alignment items:

PROPERTY LayoutMnger1 MENUITEMS '+Direction'
PROPERTY LayoutMnger1 MENUITEMS '+Caption'
PROPERTY LayoutMnger1 MENUITEMS '+Border'
PROPERTY LayoutMnger1 MENUITEMS '-AlignHorz'
PROPERTY LayoutMnger1 MENUITEMS '-AlignVert'
- AlignVert

Specifies if the Vertical Alignment context menu item is visible, when the end user right clicks on the control.

The following displays the layout direction, caption, and border context menu items, and does not display the alignment items:

PROPERTY LayoutMnger1 MENUITEMS '+Direction'
PROPERTY LayoutMnger1 MENUITEMS '+Caption'
PROPERTY LayoutMnger1 MENUITEMS '+Border'
PROPERTY LayoutMnger1 MENUITEMS '-AlignHorz'
PROPERTY LayoutMnger1 MENUITEMS '-AlignVert'
- +Direction

Specifies if the Layout Direction context menu item is visible, when the end user right clicks on the control.

The following displays the layout direction, caption, and border context menu items, and does not display the alignment items:

PROPERTY LayoutMnger1 MENUITEMS '+Direction'
PROPERTY LayoutMnger1 MENUITEMS '+Caption'
PROPERTY LayoutMnger1 MENUITEMS '+Border'
PROPERTY LayoutMnger1 MENUITEMS '-AlignHorz'
PROPERTY LayoutMnger1 MENUITEMS '-AlignVert'
- Direction

Specifies if the Layout Direction context menu item is visible, when the end user right clicks on the control.

The following displays the layout direction, caption, and border context menu items, and does not display the alignment items:

PROPERTY LayoutMnger1 MENUITEMS '+Direction'
PROPERTY LayoutMnger1 MENUITEMS '+Caption'
PROPERTY LayoutMnger1 MENUITEMS '+Border'
PROPERTY LayoutMnger1 MENUITEMS '-AlignHorz'
PROPERTY LayoutMnger1 MENUITEMS '-AlignVert'
- +CaptionLayout

Specifies if the Caption Layout context menu item is visible, when the end user right clicks on the control.

The following displays the layout direction, caption, and border context menu items, and does not display the alignment items:

PROPERTY LayoutMnger1 MENUITEMS '+Direction'
PROPERTY LayoutMnger1 MENUITEMS '+Caption'
PROPERTY LayoutMnger1 MENUITEMS '+Border'
PROPERTY LayoutMnger1 MENUITEMS '-AlignHorz'
PROPERTY LayoutMnger1 MENUITEMS '-AlignVert'
- CaptionLayout

Specifies if the Caption Layout context menu item is visible, when the end user right clicks on the control.

Additional Controls

+Width	Specifies whether the width of the layout control's is managed by the layout control.	
-Height	Specifies whether the height of the layout control's is managed by the layout control.	
+Height	Specifies whether the height of the layout control's is managed by the layout control.	
-Width	Specifies whether the width of the layout control's is managed by the layout control.	

Additional Controls

Layout Manager

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

Form Controls and Properties		Additional Controls
Control	Property	Value
Additional Controls		Tile
ENABLED		
	TRUE	Specifies the tile's accessibility to end-users.
	FALSE	Specifies the tile's accessibility to end-users.
ANIMATIONINTERVAL		
	n	Specifies the animation delay (in milliseconds) for the item's tile frames and mosaics.
ANIMATIONMODE		
	SCROLLLEFT	Specifies the animation transition effect for tile frames to scroll right to left.
	SCROLLUP	Specifies the animation transition effect for tile frames to scroll bottom to top.
	SCROLLRIGHT	Specifies the animation transition effect for tile frames to scroll left to right.
	SCROLLDOWN	Specifies the animation transition effect for tile frames to scroll top to bottom.
	FADE	Specifies the animation transition effect for tile frames to perform a standard fade-in (fade for short).
	SEGMENTEDFADE	Specifies the animation transition effect for tile frames to perform a segmented fade.
	RANDOMSEGMENTEDFADE	Specifies the animation transition effect for tile frames to perform a random segmented fade.
'DETAILOPTIONS->CAPTION'		
	Value	Specifies the caption of a tab displayed in a tile menu's title for a detail page. This property is in effect only if you set the Show Tab property to True.
		Note: If the Caption property is assigned an empty string, then the text of one of four text blocks of a tile item (searched from the first to the fourth) is used as the tab caption. If none of the text blocks is specified, the tile item's component name is used instead.
'DETAILOPTIONS->SHOWTAB'		
	TRUE	Controls the visibility of a tab displayed in a tile menu's title for the current detail page. Specify tab captions to let end-users identify specific detail pages and navigate to them with tab clicks or taps. The default value of the Show Tab property is False.
	FALSE	Controls the visibility of a tab displayed in a tile menu's title for the current detail page. Specify tab captions to let end-users identify specific detail pages and navigate to them with tab clicks or taps. The default value of the Show Tab property is False.
'DETAILOPTIONS->DETAILCOMPID'		
	<Component ID>	Associates a control to be displayed by a detail page on tile activation. Use this property to associate a tile item with a detail control. Activating the tile item using either a click or tap will display the associated detail control in a detail page. For best results, use an Enhanced Panel. Store the panel within the Tab Page of an Enhanced Tab Control for easier storage.
GROUPINDEX		
	n	Specifies the group the tile is assigned to. The value is a zero-based index. If a tile belongs to the first group, the GROUPINDEX is 0.
INDEXINGROUP		
	n	Specifies a unique identifier of a tile for the group it is in. The value is a zero-based index. If a tile is the 4th tile in the 2nd group, then GROUPINDEX=1 and INDEXINGROUP=3.
ROWCOUNT		
	n	Specifies the number of rows that the tile item occupies.

Additional Controls
Tile

'STYLE->GRADIENT'		
HORIZONTAL		Specifies the gradient fill type for the tile's background.
VERTICAL		Specifies the gradient fill type for the tile's background.
FORWARD DIAGONAL		Specifies the gradient fill type for the tile's background.
BACKWARD DIAGONAL		Specifies the gradient fill type for the tile's background.
'STYLE->GRADIENTBEGINCOLOR'		
Value		Specifies the start color of a gradient fill or the fill color for a solid filling used for the tile's background.
'STYLE->GRADIENTENDCOLOR'		
Value		Specifies the end color of a gradient fill used for the tile's background.
'STYLE->STRETCH'		
STRETCH		Specifies how an image specified by the Texture property fills the a tile's background.
TILE		Specifies how an image specified by the Texture property fills the a tile's background.
NORESIZE		Specifies how an image specified by the Texture property fills the a tile's background.
'OPTIONSANIMATE->ANIMATETEXT'		
TRUE		Specifies if text blocks in a tile are animated along with its background and glyph when showing this tile.
FALSE		Specifies if text blocks in a tile are animated along with its background and glyph when showing this tile.
VISIBLE		
FALSE		Specifies if the tile is displayed.
TRUE		Specifies if the tile is displayed.
STRETCHDETAILCONTROL		
FALSE		Specifies whether the detail control area uses the same horizontal and vertical margins of the Tile Menu, where the tiles are laid out. When this property is checked, the margins of the detail area are set to zero.
TRUE		Specifies whether the detail control area uses the same horizontal and vertical margins of the Tile Menu, where the tiles are laid out. When this property is checked, the margins of the detail area are set to zero.
'TEXT1->ALIGN'		
MIDDLELEFT		Specifies the position of the text block.
TOPLEFT		Specifies the position of the text block.
TOPCENTER		Specifies the position of the text block.
TOPRIGHT		Specifies the position of the text block.
BOTTOMCENTER		Specifies the position of the text block.
BOTTOMRIGHT		Specifies the position of the text block.
MIDDLERIGHT		Specifies the position of the text block.
BOTTOMLEFT		Specifies the position of the text block.
DEFAULT		Specifies the position of the text block.
MIDDLECENTER		Specifies the position of the text block.

Additional Controls
Tile

'FRAMES[N]->TEXT1->FONT->STYLE'

- +Bold

Applies the bold style to the Text1 surface area of the tile for the specified frame.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '-Underline'
```

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.
- Bold

Removes the bold style from the Text1 surface area of the tile for the specified frame.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '-Underline'
```

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.
- +Italic

Applies the italic style to the Text1 surface area of the tile for the specified frame.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '-Underline'
```

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.
- Italic

Removes the italic style from the Text1 surface area of the tile for the specified frame.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '-Underline'
```

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.
- +Underline

Applies the underline style to the Text1 surface area of the tile for the specified frame.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '-Underline'
```

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.
- Underline

Removes the underline style from the Text1 surface area of the tile for the specified frame.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT1->FONT->STYLE' '-Underline'
```

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.
- +StrikeOut

Applies the strikeout style to the Text1 surface area of the tile for the specified frame.

Removes the bold style from the Text4 surface area of the tile for the specified frame.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '-Underline'
```

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.
- +Italic

Applies the italic style to the Text4 surface area of the tile for the specified frame.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '-Underline'
```

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.
- Italic

Removes the italic style from the Text4 surface area of the tile for the specified frame.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '-Underline'
```

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.
- +Underline

Applies the underline style to the Text4 surface area of the tile for the specified frame.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '-Underline'
```

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.
- Underline

Removes the underline style from the Text4 surface area of the tile for the specified frame.

The following applies the bold and italic font styles, and removes underline:

```
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '-Underline'
```

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.
- +StrikeOut

Applies the strikeout style to the Text4 surface area of the tile for the specified frame.

Control	Property	Value
---------	----------	-------

Additional Controls
Tile

'FRAMES[N]->TEXT4->FONT->STYLE'

The following applies the bold and italic font styles, and removes underline:
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '-Underline'

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.

-StrikeOut Removes the strikeout style from the Text4 surface area of the tile for the specified frame.

The following applies the bold and italic font styles, and removes underline:
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Bold'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '+Italic'
PROPERTY TileID 'FRAMES[N]->TEXT4->FONT->STYLE' '-Underline'

Note: Tiles can contain multiple frames accessed through the indexed property FRAMES[n], where n is the frame index.

'FRAMES[N]->TEXT4->WORDWRAP'

- TRUE** Specifies if the text block can span across multiple lines.
- FALSE** Specifies if the text block can span across multiple lines.

Form Controls and Properties		Internet Controls
Control	Property	Value
<div>Internet Controls</div> <div>  </div>		
<div>Internet Controls</div> <div>Web Browser</div>		
ALIGN		
	CLIENT	Determines how the control aligns within its container (parent control).
	BOTTOM	Determines how the control aligns within its container (parent control).
	LEFT	Determines how the control aligns within its container (parent control).
	RIGHT	Determines how the control aligns within its container (parent control).
	TOP	Determines how the control aligns within its container (parent control).
	NONE	Determines how the control aligns within its container (parent control).
HEIGHT		
	nnn	Use the Height property to read or change the height of the control.
HINT		
	HINT	Contains the text string that can appear when the user moves the mouse over the control.
SHOWHINT		
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER		
	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP		
	FALSE	Determines if the user can tab to a control.
TOP		
	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
URL		
	URL	Use this property if you would like to display a different name for the link.
VISIBLE		
	FALSE	Determines whether the component appears on screen.
	TRUE	Determines whether the component appears on screen.
WIDTH		
	nnn	Specifies the horizontal size of the control or form in pixels.
GOURL		
	value	Use this property to launch a specific URL.

Control	Property	Value

Internet Controls
Web Browser

CURRENTURL	<div>value</div>	Use this property to capture the current URL to a variable.
MOVEBACK	<div>TRUE</div>	Specifies whether the Web Browser control moves backward to the previous page in the browser history.
	<div>FALSE</div>	Specifies whether the Web Browser control moves backward to the previous page in the browser history.
MOVEFORWARD	<div>TRUE</div>	Specifies whether the Web Browser control moves forward to the previous page in the browser history.
	<div>FALSE</div>	Specifies whether the Web Browser control moves forward to the previous page in the browser history.
SUPPRESSSCRIPTERRORS	<div>TRUE</div>	Specifies whether warning or script error messages are suppressed for the control. Depending on the server URLs, users may encounter script errors or warning messages and then are forced to click on the [OK] button to continue.
	<div>FALSE</div>	Specifies whether warning or script error messages are suppressed for the control. Depending on the server URLs, users may encounter script errors or warning messages and then are forced to click on the [OK] button to continue.

_CLICK	<div>Value</div>	<p>Simulates a mouse click on a control on the page (e.g. button, link). This can be used to initiate form submission after filling the HTML input controls.</p> <p>PROPERTY WebBrowser1 "_CLICK ID btnSubmit" "AnyValue"</p> <p>Notes:</p> <ul style="list-style-type: none">. HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.. The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP TAG xxx ID yyy NAME zzz". HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags. <p>The dynamic properties are useful in the following:</p> <ul style="list-style-type: none">. Integrating local data with web sites that do not have an API. Automating web page tasks within R:BASE. Extracting data from web pages
--------	------------------	--

Control	Property	Value
---------	----------	-------

Internet Controls
Web Browser

_VALUE

Value Specifies the value of the HTML control.

```
PROPERTY WebBrowser1 "_VALUE|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_VALUE|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_INNER_HTML

Value Specifies the HTML between the start and end tags of the object. For the object "<p>Text here...</p>", the INNER_HTML is "Text here..."

```
PROPERTY WebBrowser1 "_INNER_HTML|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_INNER_HTML|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

Internet Controls

Web Browser

_INNER_TEXT

Value Specifies the text between the start and end tags of the object stripping all the tags. For the object "<p>Text here...</p>", the INNER_TEXT is "Text here..."

```
PROPERTY WebBrowser1 "_INNER_TEXT|ID txtName" ".vNameFromDatabase"
GETPROPERTY WebBrowser1 "_INNER_TEXT|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_OUTER_HTML

Value Specifies the object and its content in HTML. For the object "<p>Text here...</p>", the OUTER_HTML is "<p>Text here...</p>"

```
PROPERTY WebBrowser1 "_OUTER_HTML|ID txtName" ".vNameFromDatabase"
GETPROPERTY WebBrowser1 "_OUTER_HTML|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

Control	Property	Value
---------	----------	-------

Internet Controls
Web Browser

_OUTER_TEXT

Value Specifies the text of the object. For the object "<p>Text here...</p>", the OUTER_HTML is "Text here... "

```
PROPERTY WebBrowser1 "_OUTER_TEXT|ID txtName" ".vNameFromDatabase"  
GETPROPERTY WebBrowser1 "_OUTER_TEXT|ID txtName" "vNameFromDatabase"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_ID_LIST

Value Captures a CSV string of element IDs.

```
Get all IDs:  
GETPROPERTY WebBrowser1 "_ID_LIST" "vIDList"  
  
Get IDs of all anchors:  
GETPROPERTY WebBrowser1 "_ID_LIST|TAG A" "vIDList"  
  
Get IDs of all dropdowns:  
GETPROPERTY WebBrowser1 "_ID_LIST|TAG SELECT" "vIDList"
```

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

Control	Property	Value
---------	----------	-------

Internet Controls
Web Browser

_NAME_LIST

Value Captures a CSV string of element Names.

Get all Names:
GETPROPERTY WebBrowser1 "_NAME_LIST" "vNameList"

Get Names of all anchors:
GETPROPERTY WebBrowser1 "_NAME_LIST|TAG A" "vNameList"

Get Names of all dropdowns:
GETPROPERTY WebBrowser1 "_NAME_LIST|TAG SELECT" "vNameList"

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

_CUSTOM_LIST

Value Captures a CSV string of element details. Key columns are TAG, ID, NAME, VALUE. At least one of the four columns should be specified. Additional columns can be added; INNER_HTML, INNER_TEXT, OUTER_HTML, OUTER_TEXT, <TagAttribute>. The order of the four required columns is fixed. The optional columns are ordered based on the order in the field list.

GETPROPERTY WebBrowser1 "_CUSTOM_LIST|FIELDS ID,VALUE" "vIDValuePairs"
GETPROPERTY WebBrowser1 "_CUSTOM_LIST|FIELDS ID,SRC|TAG IMG" "vImageList"

Notes:

- . HTML elements can be referenced by TAG, ID, and NAME. For a well defined HTML page, the ID alone is enough to locate the HTML element. In case of conflicts combination of the three identifiers can be used depending on the document.
- . The property name is preceded with an underscore to distinguish between dynamic and non-dynamic properties. Dynamic property is composed of the property name and the HTML element identifiers. The full dynamic property name syntax is: "_PROP|TAG xxx|ID yyy|NAME zzz"
- . HTML skills would be required to be able to inspect the underlying web pages, to determine how to identify the objects/tags.

The dynamic properties are useful in the following:

- . Integrating local data with web sites that do not have an API
- . Automating web page tasks within R:BASE
- . Extracting data from web pages

Integrating local data with web sites that do not have an API. Automating web page tasks within R:BASE. Extracting data from web pages
-------	---

SELECTEDENGINE

NO_PREFERRED	Specifies no preference for the browser engine, where the operating system default will determine the browser to use.
EDGE_ONLY	Specifies to use Edge.
EDGE_IF_AVAILABLE	Specifies to use Edge if available.
IE_ONLY	Specifies to use Internet Explorer.

USERDATAFOLDER

Value	<p>Specifies the folder location where Edge places the session information (Chromium environment). Unlike Internet Explorer, Chromium-based browsers supports multiple sessions (e.g. normal, incognito, etc.), and each session does not see each other.</p>

Internet Controls
E-Mail Label

ALIGN

- CLIENT

Determines how the control aligns within its container (parent control).
- BOTTOM

Determines how the control aligns within its container (parent control).
- LEFT

Determines how the control aligns within its container (parent control).
- RIGHT

Determines how the control aligns within its container (parent control).
- TOP

Determines how the control aligns within its container (parent control).
- NONE

Determines how the control aligns within its container (parent control).

ALIGNMENT

- CENTER

Text is centered in the control.
- LEFT

Text is left-justified: Lines all begin at the left edge of the control.
- RIGHT

Text is right-justified: Lines all end at the right edge of the control.

AUTOSIZE

- TRUE

Specifies whether the control sizes itself automatically to accommodate its contents.
- FALSE

Specifies whether the control sizes itself automatically to accommodate its contents.

CAPTION

- CAPTION

Specifies the text string that the Label displays.

Use Caption to specify the text that the Label displays. To underline a character in a Caption, include the ampersand (&) before the character. This type of character is called an accelerator character.

COLOR

- Value

Specifies the background color of the control.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

BLINKINTERVALON	nnn	<p>This property controls how long (in milliseconds) a blinking caption stays in the On BlinkState</p>

Internet Controls

E-Mail Label

BORDERCOLOR

Value Use this property to specify the color used to fill the region between the inner and outer borders.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

ACTIVECOLOR

Value Specifies the color to be used to draw the Caption of the E-Mail Label that has not yet been clicked on by the user. The default value is Highlight.

PASSIVECOLOR

Value Specifies the color to be used to draw the Caption of the E-Mail Label that has been clicked on by the user. The default value is Purple.

ROTATION

- FLAT** Determines how the label is rotated. When set to Flat, the label is rotated within the center of the bounding rectangle at the angle specified in the Angle property.
- CURVE** Determines how the label is rotated. When Rotation is set to Curve, the label is displayed along the curve defined by the bounding rectangle.

The CenterPoint property can be used to alter the curve.
- NONE** Determines how the label is rotated. When Rotation is set to None, no rotation is performed.

SHADOWCOLOR

Value Specifies the shadow color used in the 3D text styles.

SHADOWDEPTH

nnn Specifies how far down and to the right the shadow text will be displayed from the main text. This property is only applicable when "Text Style" is set to Shadow.

ANGLE

nnn Specifies the angle used to rotate the label.

Control	Property	Value
---------	----------	-------

Internet Controls
E-Mail Label

CENTERPOINT

Value Specifies the origin of the curve used when drawing the label, and when the Rotation is set to Curve.

The center position can be any one of the nine locations defined by the bounding rectangle:

UpperLeft	UpperCenter	UpperRight
LeftCenter	Center	RightCenter
LowerLeft	LowerCenter	LowerRight

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

ENABLED

TRUE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FALSE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FRAMEVISIBLE

TRUE This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties

FALSE This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties

HEIGHT

nnn Specifies the vertical size of the control in pixels.

Control	Property	Value
---------	----------	-------

File System Controls

Directory Tree

HIDESELECTION	FALSE	Determines whether a selected node appears selected when the focus shifts to another control.
	TRUE	Determines whether a selected node appears selected when the focus shifts to another control.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
HOTTRACK	TRUE	Specifies whether list items are highlighted when the mouse passes over them.
	FALSE	Specifies whether list items are highlighted when the mouse passes over them.
INDENT		
	nnn	Specifies the amount of indentation in pixels when a list of child nodes is expanded.
LEFT		
	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
OPENCURRENTDIR	TRUE	When this property is set to True, the current directory is automatically selected in the directory tree. When this property is set to False (the default), the root directory of the current drive is selected.
	FALSE	When this property is set to True, the current directory is automatically selected in the directory tree. When this property is set to False (the default), the root directory of the current drive is selected.
READONLY	TRUE	Determines whether the user can edit the node labels
	FALSE	Determines whether the user can edit the node labels
ROWSELECT	TRUE	Specifies whether the entire row of the selected item is highlighted.
	FALSE	Specifies whether the entire row of the selected item is highlighted.
SHOWBUTTONS	TRUE	Specifies whether to display plus (+) and minus (-) buttons to the left side of each parent item.
	FALSE	Specifies whether to display plus (+) and minus (-) buttons to the left side of each parent item.
SHOWHIDDENDIRS	TRUE	This property controls whether or not the tree view displays directories with the faHidden attribute set.
	FALSE	This property controls whether or not the tree view displays directories with the faHidden attribute set.
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.

Directory Tree

SHOWLINES	<div>TRUE</div>	Specifies whether to display the lines that link child nodes to their corresponding parent nodes.
	<div>FALSE</div>	Specifies whether to display the lines that link child nodes to their corresponding parent nodes.
TABORDER	<div>nnn</div>	Indicates the position of the control in its parent's tab order.
TABSTOP	<div>FALSE</div>	Determines if the user can tab to a control.
	<div>TRUE</div>	Determines if the user can tab to a control.
TOP	<div>nnn</div>	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	<div>TRUE</div>	Determines whether the component appears on screen.
	<div>FALSE</div>	Determines whether the component appears on screen.
WIDTH	<div>nnn</div>	Specifies the horizontal size of the control or form in pixels.
DIRECTORY	<div>value</div>	Use this property to specify the initial directory displayed in a Directory Tree control. For the Directory Tree this property provides runtime access to the directory currently selected in the control.
EXPANDSELECTED	<div>TRUE</div>	Specifies if the currently selected folder will be expanded, if subfolders exist.
	<div>FALSE</div>	Specifies if the currently selected folder will be expanded, if subfolders exist.
REFRESHLIST	<div>TRUE</div>	Specifies if the list within the control is refreshed.
	<div>FALSE</div>	Specifies if the list within the control is refreshed.
TOOLTIPS	<div>TRUE</div>	Determines if the folder or root name is displayed if the text value exceeds the control width.
	<div>FALSE</div>	Determines if the folder or root name is displayed if the text value exceeds the control width.

File System Controls

File List Box

ALIGN

- NONE

Determines how the control aligns within its container (parent control).
- BOTTOM

Determines how the control aligns within its container (parent control).
- LEFT

Determines how the control aligns within its container (parent control).
- RIGHT

Determines how the control aligns within its container (parent control).
- TOP

Determines how the control aligns within its container (parent control).
- CLIENT

Determines how the control aligns within its container (parent control).

ALLOWOPEN

- TRUE

Use this property to specify what happens when a file in the list box is double-clicked. When this property is set to True, the list box will attempt to start the application associated with the file and open the selected the file. When AllowOpen is False, double-clicking on a file does nothing.
- FALSE

Use this property to specify what happens when a file in the list box is double-clicked. When this property is set to True, the list box will attempt to start the application associated with the file and open the selected the file. When AllowOpen is False, double-clicking on a file does nothing.

COLOR

Value Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

COLUMNS

nnn Specifies the number of columns, in a multi-column list box, that are visible without having to scroll.

DEFAULTDIRECTORY

Value Use this property to specify the default directory.

Control	Property	Value

File System Controls

File List Box

MASK	MASK	Limits which files are displayed in the file list box. The Mask accepts wildcard character values like DOS prompt file masks. The asterisk (*) is a wildcard which matches any number of arbitrary characters. The question mark (?) is a wildcard which matches a single arbitrary character. The file mask *.* displays all files, which is the default value. For example, when using the question mark, the File List Box will limit the displayed files to JPGs starting with "Image" and has a maximum of eight characters using the following mask: Image???.jpg The asterisk can be used to specify any number of characters before or after the specified text, meaning the following will display images that contain any variation with the text "form" in the file name (e.g. CopyForm.jpg, FormSettings.jpg, etc.): *form*.jpg Multiple masks can also be specified using a semicolon as the mask separator. For example, the following will limit the displayed files to JPG, PNG, and BMP images: *.jpg;*.png;*.bmp To enhance the File List Box to use a mask dynamically, use the PROPERTY command within an EEP as follows, to display only PDF document that begin with the text "Invoice": PROPERTY FileListBox1 MASK 'Invoice*.pdf'
	RESTOREDIRECTORY	<div>TRUE</div> Restore initial directory after form close. <div>FALSE</div> Restore initial directory after form close.
	SHOWGLYPHS	<div>TRUE</div> Determines whether glyphs (bitmaps) appear next to the file names listed in the file list box. <div>FALSE</div> Determines whether glyphs (bitmaps) appear next to the file names listed in the file list box.
	SHOWHINT	<div>TRUE</div> Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control. <div>FALSE</div> Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	SHOWLONGNAMES	<div>TRUE</div> This property controls whether long names are displayed when the application is run under an operating system that supports long file names. That is, Windows 95/98 or Windows NT. <div>FALSE</div> This property controls whether long names are displayed when the application is run under an operating system that supports long file names. That is, Windows 95/98 or Windows NT.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	FALSE	Determines if the user can tab to a control.
	TRUE	Determines if the user can tab to a control.

Control	Property	Value
---------	----------	-------

File System Controls

File List Box

TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
REFRESHLIST	TRUE	This property will refresh the list of files being displayed.
LONGFILENAME	varname	Use this property to obtain the long version (as file is displayed, and not the 8.3 format) of the currently selected file name in a FileListBox control. Support for GETPROPERTY command only.
SHORTFILENAME	varname	Use this property to obtain the short version (8.3 format) of the currently selected file name in a FileListBox control. Support for GETPROPERTY command only.
SHOWSORTFIELD	TRUE	Determines if the sorted field is displayed.
	FALSE	Determines if the sorted field is displayed.
SORTASCENDING	TRUE	Specifies if the sort is ascending.
	FALSE	Specifies if the sort is ascending.
EXTRACTTHUMBNAILS	TRUE	Specifies to display thumbnail images for the listed files
	FALSE	Specifies to display thumbnail images for the listed files
ONLYFILENAME	varname	Use this property to obtain the currently selected file name in a FileListBox control, and not the full path. Support for GETPROPERTY command only. Example: GETPROPERTY FileListBox ONLYFILENAME 'vFileName'
FILENAME	Value	Specifies to select a single file in a folder based upon knowing a portion of the file name. PROPERTY FileListBox1 FILENAME .vPartialFileName

Control	Property	Value
---------	----------	-------

File System Controls

File List Box

SELECTEDFILES

varname Returns a comma delimited string of the selected files.

SORTFIELD

Extension Specifies to sort the files by file extension.

Name Specifies to sort the files by name.

CreationTime Specifies to sort the files by the creation time.

LastAccessTime Specifies to sort the files by the last accessed time.

LastWriteTime Specifies to sort the files by the last write time.

Size Specifies to sort the files by size.

SORTFIELD

sfLastWriteTime

sfSize

sfCreationTime

sfLastAccessTime

sfExtension

sfName Returnss the current sort method. Values can be the following:

- sfName = File Name
- sfExtension = File Extension
- sfSize = File Size
- sfCreationTime = Creation Time
- sfLastAccessTime = Last Access Time
- sfLastWriteTime = Last Write Time

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

Control	Property	Value
---------	----------	-------

Legacy Controls

Legacy Controls

Wallpaper

HEIGHT	nnn	Use the Height property to read or change the height of the control.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.

ALIGN

- NONE

Determines how the control aligns within its container (parent control).
- TOP

Determines how the control aligns within its container (parent control).
- BOTTOM

Determines how the control aligns within its container (parent control).
- CLIENT

Determines how the control aligns within its container (parent control).
- RIGHT

Determines how the control aligns within its container (parent control).
- LEFT

Determines how the control aligns within its container (parent control).

ENABLED

- TRUE

Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
- FALSE

Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FRAMECOLOR

- Value

Use this property to specify the color to be used when the Style property are set to Flat.

Values:

AQUA

BLACK

BLUE

CREAM

DARK GRAY

FUCHSIA

GRAY

GREEN

LIME

LIGHT GRAY

MAROON

MEDIUM GRAY

MINT GREEN

NAVY

OLIVE

PURPLE

RED

SILVER

SKY BLUE

TEAL

YELLOW

Legacy Controls

Custom Wallpaper

GRADIENTCOLORSTART

Value Use this property to specify which color will be used as the starting color for the gradient fill. To set the ending color, use the GradientColorStop property.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

GRADIENTCOLORSTOP

Value Use this property to specify the color the gradient fill should end with. To set the starting color use the GradientColorStart property.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
LEFT	LEFT	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
SHOWGRADIENT	TRUE	This property is mutually exclusive with respect to the ShowTexture property. That is, only one of these two properties can be set to True at one time. When ShowGradient is True, the client area of the component is filled with a gradient pattern defined by the GradientColorStart, GradientColorStop.
	FALSE	This property is mutually exclusive with respect to the ShowTexture property. That is, only one of these two properties can be set to True at one time. When ShowGradient is True, the client area of the component is filled with a gradient pattern defined by the GradientColorStart, GradientColorStop.
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
SHOWIMAGE	TRUE	Use this property to show or hide the image specified by the Image property. Note that the Image can be shown along with a gradient or textured background.
	FALSE	Use this property to show or hide the image specified by the Image property. Note that the Image can be shown along with a gradient or textured background.
SHOWTEXTURE	TRUE	This property is mutually exclusive with respect to the ShowGradient property. That is, only one of these two properties can be set to True at one time. When ShowTexture is True, the client area of the component is filled by tiling the image specified in the Texture property.
	FALSE	This property is mutually exclusive with respect to the ShowGradient property. That is, only one of these two properties can be set to True at one time. When ShowTexture is True, the client area of the component is filled by tiling the image specified in the Texture property.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.

DB Grid

'TITLES[N]->ALIGNMENT'

LEFT Specifies the text alignment of the column title.

Syntax:

```
PROPERTY <DBGridComponentID> 'TITLES[n]->ALIGNMENT' 'Value'  
GETPROPERTY <DBGridComponentID> 'TITLES[n]->ALIGNMENT' vVarValue
```

Where:

The value for "n" is the column title order in the grid from left to right starting with 0.

RIGHT Specifies the text alignment of the column title.

Syntax:

```
PROPERTY <DBGridComponentID> 'TITLES[n]->ALIGNMENT' 'Value'  
GETPROPERTY <DBGridComponentID> 'TITLES[n]->ALIGNMENT' vVarValue
```

Where:

The value for "n" is the column title order in the grid from left to right starting with 0.

CENTER Specifies the text alignment of the column title.

Syntax:

```
PROPERTY <DBGridComponentID> 'TITLES[n]->ALIGNMENT' 'Value'  
GETPROPERTY <DBGridComponentID> 'TITLES[n]->ALIGNMENT' vVarValue
```

Where:

The value for "n" is the column title order in the grid from left to right starting with 0.

CURRENTCOLUMNNAME

Value Captures the name of currently focused column in DB Grid.

Use with the GETPROPERTY Command only.

SELECTEDINDEX

Value Specifies the index of the currently selected column in the Columns array.

Description:

Set SelectedIndex to move focus to a column in the grid that is identified by position. Read SelectedIndex to determine which column in the grid has focus. A value of 0 indicates the first data column, 1 is the second data column, and so on. SelectedIndex is -1 if there is no currently selected column.

If the "Indicator" setting is enabled, the index of the data column given by SelectedIndex will differ from the index of the physical column in the grid.

Legacy Controls
DB Grid

'COLUMNS[N]->ALIGNMENT'

CENTER Specifies the text alignment of the column value.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->ALIGNMENT' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->ALIGNMENT' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

LEFT Specifies the text alignment of the column value.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->ALIGNMENT' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->ALIGNMENT' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

RIGHT Specifies the text alignment of the column value.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->ALIGNMENT' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->ALIGNMENT' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

Control	Property	Value
---------	----------	-------

Legacy Controls
DB Grid

'COLUMNS[N]->READONLY'

TRUE Indicates whether the column is used for display only, or whether the user can edit data.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->READONLY' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->READONLY' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

FALSE Indicates whether the column is used for display only, or whether the user can edit data.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->READONLY' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->READONLY' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

'COLUMNS[N]->VISIBLE'

TRUE Determines whether the column appears on screen.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->VISIBLE' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->VISIBLE' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

FALSE Determines whether the column appears on screen.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->VISIBLE' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->VISIBLE' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

Legacy Controls

DB Grid

'COLUMNS[N]->FIELDNAME'

Value To allow the programmer direct access to the field value for the DB Grid column.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->FIELDNAME' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->FIELDNAME' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

'COLUMNS[N]->COLOR'

Value Specifies the background color of the column in the grid.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->COLOR' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->COLOR' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

FALSE Specifies if the font is displayed with a horizontal line through it.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_STRIKEOUT' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_STRIKEOUT' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

'COLUMNS[N]->FONT_UNDERLINE'

TRUE Specifies if the font is underlined.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_UNDERLINE' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_UNDERLINE' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

FALSE Specifies if the font is underlined.

Syntax:

PROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_UNDERLINE' 'Value'

GETPROPERTY <DBGridComponentID> 'COLUMNS[n]->FONT_UNDERLINE' vVarValue

Where:

The value for "n" is the column order in the grid from left to right starting with 0.

'COLUMNS[N]->CLICKABLETITLE

TRUE Specifies whether the DB Grid column is clickable to allow the column values to be sorted in ascending or descending order

FALSE Specifies whether the DB Grid column is clickable to allow the column values to be sorted in ascending or descending order

Control	Property	Value
---------	----------	-------

Legacy Controls
DB Grid

HOTTRACK

- TRUE

Determines if an additional border is displayed around a control when the mouse is positioned over it.
- FALSE

Determines if an additional border is displayed around a control when the mouse is positioned over it.

FRAMEHOTSTYLE

- Value

This property is only used when Frame Hot Track and Frame Visible are both enabled. Use this property to specify the style of the frame drawn around a component when the mouse cursor is positioned over the control or the control has the input focus.

Options include:

. None

. Flat

. Groove

. Bump

. Lowered

. Button Down

. Raised

. Button Up

. Status

. Popup

. Flat Bold
- Value

Specifies the color to be used to draw the control's frame when Frame Hot Style is set to Flat and the mouse cursor is positioned over the control or the control has the input focus.

DISABLEDCOLOR

- Value

Specifies the background color for the control when disabled.

FOCUSCOLOR

- Value

Specifies the background color for the control when the cursor focused upon it.

DBGridBGColor_Font|TABLE TableName

- REFRESH

Refreshes the DB Grid background colors.

Example:

-- Start

-- Form Timer EEP

PROPERTY DBGridBGColor_Font|TABLE EmployeeRecords REFRESH

PROPERTY DBGridBGColor_Font|DBGrid REPAINTGRID 'TRUE'

RETURN

-- End

DBGridBGColor_Font|DBGrid REPAINTGRID

- TRUE

Repaints the DB Grid background colors.

Example:

-- Start

-- Form Timer EEP

PROPERTY DBGridBGColor_Font|TABLE EmployeeRecords REFRESH

PROPERTY DBGridBGColor_Font|DBGrid REPAINTGRID 'TRUE'

RETURN

-- End

Legacy Controls
DB Grid

FORCEREFRESHVALUE

TRUE

In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed).

```
PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'
```

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

DISPLAYFORMAT

Value Specifies the display format for the control.

Examples:

```
PROPERTY CI_LastUpdate DISPLAYFORMAT 'dddd, mmmm dd, yyyy'  
PROPERTY CI_UpdateTime DISPLAYFORMAT 'h:nn:ss AM/PM'  
PROPERTY CI_TotalAmount DISPLAYFORMAT '#,0.00;-#,0.00'  
PROPERTY CI_FinalCalib DISPLAYFORMAT '#.#,E+00'
```

MAKERIGHTCLICK

Specifies to fire the "On Right Click" EEP for the control, simulating a mouse right click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerList MAKERIGHTCLICK ' '
```

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

AUTOSCROLLCONTENT

TRUE Specifies whether to begin scrolling for the content of the control.

The scrolling may only be assigned (TRUE/FALSE) at runtime with the PROPERTY command.

Use the "Auto-Scroll Interval" setting within the Form Designer to assign the scroll interval (in milliseconds).

FALSE Specifies whether to begin scrolling for the content of the control.

The scrolling may only be assigned (TRUE/FALSE) at runtime with the PROPERTY command.

Use the "Auto-Scroll Interval" setting within the Form Designer to assign the scroll interval (in milliseconds).

nnn Use BevelWidth to specify how wide the inner or outer bevel should be.

COLOR

Value Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

ENABLED

TRUE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FALSE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FLATBUTTONS

TRUE This property controls whether or not the buttons embedded in each of these controls appears as a normal 3D button or with the Flat style. When set to True, the buttons appear without any border until the mouse is positioned over the button.

FALSE This property controls whether or not the buttons embedded in each of these controls appears as a normal 3D button or with the Flat style. When set to True, the buttons appear without any border until the mouse is positioned over the button.

Control	Property	Value
---------	----------	-------

Legacy Controls

DB Date/Time Picker

FORMAT

FORMAT

Specify format for date-time string.

Element	Description
d	The one- or two-digit day.
dd	The two-digit day. Single-digit day values are preceded by a zero.
ddd	The three-character weekday abbreviation.
dddd	The full weekday name.
h	The one- or two-digit hour in 12-hour format.
hh	The two-digit hour in 12-hour format. Single-digit values are preceded by a zero.
H	The one- or two-digit hour in 24-hour format.
HH	The two-digit hour in 24-hour format. Single-digit values are preceded by a zero.
m	The one- or two-digit minute.
mm	The two-digit minute. Single-digit values are preceded by a zero.
M	The one- or two-digit month number.
MM	The two-digit month number. Single-digit values are preceded by a zero.
MMM	The three-character month abbreviation.
MMMM	The full month name.
t	The one-letter AM/PM abbreviation (that is, AM is displayed as "A").
tt	The two-letter AM/PM abbreviation (that is, AM is displayed as "AM").
yy	The last two digits of the year (that is, 2001 would be displayed as "01").
yyyy	The full year (that is, 2001 would be displayed as "2001").

To include literal strings in the format, enclose them in single quotes. Failing to quote literal strings can have unpredictable results, even if they do not include formatting codes. Use two single quotes to represent one single quote character in literal string. For example,

'Today's date: ' MMM dd, yyyy

formatted for the first day of April, 2001, would display "Today's date: Apr 01, 2001".

FRAMEVISIBLE

FALSE

This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties

TRUE

This property determines whether or not the border of the control is drawn as a standard border or if the control is drawn using the custom framing properties

HEIGHT

nnn

Specifies the vertical size of the control in pixels.

HINT

HINT

Contains the text string that can appear when the user moves the mouse over the control.

LEFT

nnn

Specifies the horizontal coordinate of the left edge of a component relative to its parent.

READONLY

TRUE

Determines whether the user can change the text of the edit control.

FALSE

Determines whether the user can change the text of the edit control.

Legacy Controls

Variable Rich Edit

PLAINTEXT	TRUE	Controls whether the rich edit control treats the text as plain text or rich text when streaming to or from a file, variable or database field. To write the rich text in the control to a plain text file, set PlainText to True before streaming the text to a file. To ignore the rich text information encoded in a file, set PlainText to True before streaming the text to the control. To stream in the rich text attributes encoded in a file, or save the encoding of the rich text attributes to a file, set PlainText to False. If the rich text attributes of a file are encoded in some format other than rich text format (RTF), it is necessary to use a converter on the text, even when PlainText is True. Note: Rich edit controls do not directly support streaming. Use the Lines property to stream to or from a file.
	FALSE	Controls whether the rich edit control treats the text as plain text or rich text when streaming to or from a file, variable or database field. To write the rich text in the control to a plain text file, set PlainText to True before streaming the text to a file. To ignore the rich text information encoded in a file, set PlainText to True before streaming the text to the control. To stream in the rich text attributes encoded in a file, or save the encoding of the rich text attributes to a file, set PlainText to False. If the rich text attributes of a file are encoded in some format other than rich text format (RTF), it is necessary to use a converter on the text, even when PlainText is True. Note: Rich edit controls do not directly support streaming. Use the Lines property to stream to or from a file.
SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER		
TABSTOP	nnn	Indicates the position of the control in its parent's tab order.
TOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
VISIBLE	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
WANTRETURNS	TRUE	Determines whether the user can insert return characters into the text.
	FALSE	Determines whether the user can insert return characters into the text.

Control	Property	Value
---------	----------	-------

Legacy Controls

Variable Rich Edit

WANTTABS	TRUE	Determines whether the user can insert tab characters into the text.
	FALSE	Determines whether the user can insert tab characters into the text.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
WORDWRAP	TRUE	Determines whether the edit control inserts soft carriage returns so text wraps at the right margin.
	FALSE	Determines whether the edit control inserts soft carriage returns so text wraps at the right margin.
LOAD_FROM_FILE		
	FileName.RTF	Will load VarRichEdit from RTF File.
SAVE_TO_FILE		
	FileName.RTF	Saves the control contents to an external RTF file.
READONLYCOLOR		
	Value	Specifies the background color of the control when set to "read only".
READONLYCOLORONFOCUS		
	TRUE	Enables the "Read-Only" Color if the cursor focus is on the control.
	FALSE	Enables the "Read-Only" Color if the cursor focus is on the control.
VALIDATEDATATYPE		
	TRUE	Specifies if the data type value is validated when exiting the field.
	FALSE	Specifies if the data type value is validated when exiting the field.
READONLY		
	TRUE	Determines whether the user can change the text of the edit control.
	FALSE	Determines whether the user can change the text of the edit control.
DISPLAYFORMAT		
	Value	Specifies the display format for the control.
	Examples: PROPERTY CI_LastUpdate DISPLAYFORMAT 'dddd, mmmm dd, yyyy' PROPERTY CI_UpdateTime DISPLAYFORMAT 'h:nn:ss AM/PM' PROPERTY CI_TotalAmount DISPLAYFORMAT '#,0.00; -#,0.00' PROPERTY CI_FinalCalib DISPLAYFORMAT '#.#,E+00'	
MAKERIGHTCLICK		
	Specifies to fire the "On Right Click" EEP for the control, simulating a mouse right click. The last parameter will accept any value for the PROPERTY command.	
	Syntax: PROPERTY CustomerList MAKERIGHTCLICK ' '	

Legacy Controls

Variable Rich Edit

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

AUTOSCROLLCONTENT

TRUE Specifies whether to begin scrolling for the content of the control.

The scrolling may only be assigned (TRUE/FALSE) at runtime with the PROPERTY command.

Use the "Auto-Scroll Interval" setting within the Form Designer to assign the scroll interval (in milliseconds).

FALSE Specifies whether to begin scrolling for the content of the control.

The scrolling may only be assigned (TRUE/FALSE) at runtime with the PROPERTY command.

Use the "Auto-Scroll Interval" setting within the Form Designer to assign the scroll interval (in milliseconds).

For example, with "Drop Columns" set to 3 and "Drop Rows" set to 2, the drop down calendar will show 6 months in a 3x2 grid.

CALALIGNMENT

RIGHT Specifies the text will be displayed on the right side of the control.

LEFT Specifies the text will be displayed on the left side of the control.

FIRSTDAYOFWEEK

Value Specifies the day that is to be considered the first day of the week. The default is Locale, which gets its actual value from the operating system locale settings.

Options:

- . Monday
- . Tuesday
- . Wednesday
- . Thursday
- . Friday
- . Saturday
- . Sunday
- . Locale

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

PROPERTY CustomerName MAKEDBLCLICK ' '

Control	Property	Value

MAKEDBLCLICK

Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerName MAKEDBLCLICK ' '
```

Legacy Controls

Office Button

ACTIVECOLOR

Value Use this property to specify the color the button should change to when the mouse is positioned over the Office Button.

Available Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

ACTIVEOUTLINECOLOR

Value Use this property to specify the outline color should change to when the mouse is positioned over the Office Button.

Values:

AQUA
BLACK
BLUE
CREAM
DARK GRAY
FUCHSIA
GRAY
GREEN
LIME
LIGHT GRAY
MAROON
MEDIUM GRAY
MINT GREEN
NAVY
OLIVE
PURPLE
RED
SILVER
SKY BLUE
TEAL
WHITE
YELLOW

Legacy Controls

Office Button

CAPTION

CAPTION Specifies the caption that appears on the button.

Use Caption to specify the text string that appears on the button.

To underline a character in a Caption that appears on the button, include an ampersand (&) before the character. This type of character is called an accelerator character. The user can then select the button by pressing Alt while typing the underlined character. To display an ampersand character in the caption, use two ampersands (&&).

COLOR

Value Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

DEFAULT

- FALSE** If Default is True, the button's On Click event executes when the user presses Enter.
- TRUE** If Default is True, the button's On Click event executes when the user presses Enter.

ENABLED

- FALSE** Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.
- TRUE** Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

AUTOSIZE

- FALSE

The AutoSize property determines whether the component automatically resizes to match the size of the bitmap assigned to the Bitmap property. The default value is True.
- TRUE

The AutoSize property determines whether the component automatically resizes to match the size of the bitmap assigned to the Bitmap property. The default value is True.

BEVELHIGHLIGHTCOLOR

Value

The Bevel Highlight Color property determines the color used for the highlighted part of the 3D bevel effect applied to the bitmap's outline. The default value is BtnHighlight.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN

If Enabled is false, the control ignores mouse, keyboard, and timer events.</p> <p>To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.</p>
HEIGHT	nnn	Use the Height property to read or change the height of the control.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.

Control	Property	Value
---------	----------	-------

Legacy Controls

Panel

SHOWHINT	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
TABORDER	nnn	Indicates the position of the control in its parent's tab order.
TABSTOP	TRUE	Determines if the user can tab to a control.
	FALSE	Determines if the user can tab to a control.
TOP	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
VISIBLE	TRUE	Determines whether the component appears on screen.
	FALSE	Determines whether the component appears on screen.
WIDTH	nnn	Specifies the horizontal size of the control or form in pixels.
TRANSPARENT	TRUE	Specifies whether controls that sit below the control on a form can be seen through the panel.
	FALSE	Specifies whether controls that sit below the control on a form can be seen through the panel.
PARENTCOLOR	TRUE	Specifies that the panel will use the same color as its parent control.
	FALSE	Specifies that the panel will use the same color as its parent control.
MAKEDBLCLICK	Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command. Syntax: PROPERTY CustomerName MAKEDBLCLICK ' '	

Control	Property	Value
---------	----------	-------

Legacy Controls

Group Box

ALIGN

- NONE

Determines how the control aligns within its container (parent control).
- TOP

Determines how the control aligns within its container (parent control).
- BOTTOM

Determines how the control aligns within its container (parent control).
- LEFT

Determines how the control aligns within its container (parent control).
- RIGHT

Determines how the control aligns within its container (parent control).
- CLIENT

Determines how the control aligns within its container (parent control).

CAPTION

- CAPTION

Specifies the text string that the GroupBox displays.

Use Caption to specify the text that the Group Box displays.

To underline a character in a Caption, include the ampersand (&) before the character. This type of character is called an accelerator character.

COLOR

- Value

Specifies the background color of the control.

Available Values:

AQUA

BLACK

BLUE

CREAM

DARK GRAY

FUCHSIA

GRAY

GREEN

LIME

LIGHT GRAY

MAROON

MEDIUM GRAY

MINT GREEN

NAVY

OLIVE

PURPLE

RED

SILVER

SKY BLUE

TEAL

WHITE

YELLOW

Legacy Controls

Separator

HIGHLIGHTCOLOR

Value Specifies the foreground color of the separator.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

HIGHLIGHTLOCATION

- UPPER LEFT** Separates areas on a form using a gradient filled separator bar. The COLOR and HIGHLIGHTCOLOR properties control the colors used in the fill, while the HIGHLIGHTLOCATION determines format of the fill. Use the ORIENTATION property to change between a horizontal separator and a vertical separator.
- CENTER** Separates areas on a form using a gradient filled separator bar. The COLOR and HIGHLIGHTCOLOR properties control the colors used in the fill, while the HIGHLIGHTLOCATION determines format of the fill. Use the ORIENTATION property to change between a horizontal separator and a vertical separator.
- UPPER RIGHT** Separates areas on a form using a gradient filled separator bar. The COLOR and HIGHLIGHTCOLOR properties control the colors used in the fill, while the HIGHLIGHTLOCATION determines format of the fill. Use the ORIENTATION property to change between a horizontal separator and a vertical separator.

ORIENTATION

- HORIZONTAL** Specifies whether a component has horizontal or vertical orientation.
- VERTICAL** Specifies whether a component has horizontal or vertical orientation.

SHOWGRADIENT

- TRUE** When SHOWGRADIENT is TRUE, the separator is filled with a gradient starting from the color specified in the COLOR property and ending with the color specified in the HIGHLIGHTCOLOR property.
- FALSE** When SHOWGRADIENT is TRUE, the separator is filled with a gradient starting from the color specified in the COLOR property and ending with the color specified in the HIGHLIGHTCOLOR property.

Form Controls and Properties		Legacy Controls
Control	Property	Value
<div>Legacy Controls</div> <div>Arrow Line</div>		
TOP		
	nnn	Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.
WIDTH		
	nnn	Specifies the horizontal size of the control or form in pixels.
HINT		
	HINT	Contains the text string that can appear when the user moves the mouse over the control.
SHOWHINT		
	FALSE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
	TRUE	Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.
VISIBLE		
	FALSE	Determines whether the component appears on screen.
	TRUE	Determines whether the component appears on screen.
LINECOLOR		
	Value	Specifies the color of the control.
LINESTYLE		
	SOLID	Changes the way in which the line is displayed.
	DASH-DOT-DOT	Changes the way in which the line is displayed.
	DASH	Changes the way in which the line is displayed.
	DOT	Changes the way in which the line is displayed.
	DASH-DOT	Changes the way in which the line is displayed.
LINEWIDTH		
	nnn	Changes the thickness of the line.
		Please note that LINEWIDTH can only be set to odd values in order to ensure that the line remains centered against the arrows.
ARROWLENGTH		
	nnn	Specifies how big the arrows should be.
LINESLOPE		
	DOWN	Specifies whether the line connects the Upper-Left corner to the Lower-Right corner, or whether the Lower-Left corner connects to the Upper-Right corner.
	UP	Specifies whether the line connects the Upper-Left corner to the Lower-Right corner, or whether the Lower-Left corner connects to the Upper-Right corner.
SHOWARROWS		
	BOTH	Specifies which ends, if any, should have arrows drawn.
	NONE	Specifies which ends, if any, should have arrows drawn.
	START	Specifies which ends, if any, should have arrows drawn.
	END	Specifies which ends, if any, should have arrows drawn.

Form Controls and Properties		Legacy Controls
Control	Property	Value
<div>Legacy Controls</div> <div>DB Unicode Memo</div>		
ALIGN		
	BOTTOM	Determines how the control aligns within its container (parent control).
	TOP	Determines how the control aligns within its container (parent control).
	NONE	Determines how the control aligns within its container (parent control).
	CLIENT	Determines how the control aligns within its container (parent control).
	RIGHT	Determines how the control aligns within its container (parent control).
	LEFT	Determines how the control aligns within its container (parent control).
ALIGNMENT		
	LEFT	Text is left-justified: Lines all begin at the left edge of the control.
	CENTER	Text is centered in the control.
	RIGHT	Text is right-justified: Lines all end at the right edge of the control.
BEVELWIDTH		
	nnn	Use BevelWidth to specify how wide the inner or outer bevel should be.
COLOR		
	Value	Specifies the background color of the control.
		Available Values:
		AQUA
		BLACK
		BLUE
		CREAM
		DARK GRAY
		FUCHSIA
		GRAY
		GREEN
		LIME
		LIGHT GRAY
		MAROON
		MEDIUM GRAY
		MINT GREEN

Form Controls and Properties		Legacy Controls
Control	Property	Value
<div>Legacy Controls</div> <div>DB Unicode Memo</div>		
FIRSTCHAR	TRUE	Specifies whether the cursor will appear in the component starting position.
	FALSE	Specifies whether the cursor will appear in the component starting position.
LASTCHAR	TRUE	Specifies whether the cursor will appear in the component ending position.
	FALSE	Specifies whether the cursor will appear in the component ending position.
DISABLEDOUBLECLICK	TRUE	Toggles the ability to launch the Note/BLOB Field Viewer/Editor when using the mouse to double click.
	FALSE	Toggles the ability to launch the Note/BLOB Field Viewer/Editor when using the mouse to double click.
READONLYCOLOR	Value	Specifies the background color of the control when set to "read only".
READONLYCOLORONFOCUS	TRUE	Enables the "Read-Only" Color if the cursor focus is on the control.
	FALSE	Enables the "Read-Only" Color if the cursor focus is on the control.
PREVENTCOPY	TRUE	Specifies whether text can be copied from the field.
	FALSE	Specifies whether text can be copied from the field.
PREVENTCUT	TRUE	Specifies whether text can be cut from the field.
	FALSE	Specifies whether text can be cut from the field.
PREVENTPASTE	FALSE	Specifies whether text can be pasted into the field.
	TRUE	Specifies whether text can be pasted into the field.
AUTOSELECT	TRUE	Determines whether all the text in the edit control is automatically selected, when the control gets focus through the Tab Order.
	FALSE	Determines whether all the text in the edit control is automatically selected, when the control gets focus through the Tab Order.
FORCEREFRESHVALUE	TRUE	In seldom used instances, the ForceRefreshValue has been implemented for database controls to take the data field's value and assign it to the control, overwriting the control's current value (thus the control's value is refreshed).
	PROPERTY DB_ComponentID ForceRefreshValue 'TRUE'	
REQUIREVALUEONFORMCLOSE	TRUE	Specifies the control is checked if it has a value in the form's "On Close" event.
	FALSE	Specifies the control is checked if it has a value in the form's "On Close" event.

Form Controls and Properties		Legacy Controls
Control	Property	Value
<div>Legacy Controls</div> <div>DB Unicode Memo</div>

Form Controls and Properties		Legacy Controls
Control	Property	Value
<div>Legacy Controls</div> <div>Unicode Static Text</div>		
ALIGNMENT		
	RIGHT	Text is right-justified: Lines all end at the right edge of the control.
	CENTER	Text is centered in the control.
	LEFT	Text is left-justified: Lines all begin at the left edge of the control.
ALIGN		
	RIGHT	Right: The control moves to the right side of its parent and resizes to fill the height of its parent. The width of the control is not affected.
	LEFT	Left: The control moves to the left side of its parent and resizes to fill the height of its parent. The width of the control is not affected.
	NONE	None: The control remains where it was placed. This is the default value.
	CLIENT	Client: The control resizes to fill the client area of its parent. If another control already occupies part of the client area, the control resizes to fit within the remaining client area.
	TOP	Top: The control moves to the top of its parent and resizes to fill the width of its parent. The height of the control is not affected.
	BOTTOM	Bottom: The control moves to the bottom of its parent and resizes to fill the width of its parent. The height of the control is not affected.
ANGLE		
	nnn	Use this property to specify the angle used to rotate the label.
AUTOSIZE		
	TRUE	<p>Use AutoSize to make the label adjust its size automatically so the client area accommodates the height and width of the text. When AutoSize is False, the label is fixed in size. When AutoSize is True, the size of the label readjusts whenever the text changes. The size of the label is also readjusts when the Font property changes.</p> <p>When WordWrap is True, the width of the label is fixed. If AutoSize is also True, changes to the text cause the label to change in height. When AutoSize is True and WordWrap is False, the font determines the height of the label, and changes to the text cause the label to change in width.</p>
	FALSE	<p>Use AutoSize to make the label adjust its size automatically so the client area accommodates the height and width of the text. When AutoSize is False, the label is fixed in size. When AutoSize is True, the size of the label readjusts whenever the text changes. The size of the label is also readjusts when the Font property changes.</p> <p>When WordWrap is True, the width of the label is fixed. If AutoSize is also True, changes to the text cause the label to change in height. When AutoSize is True and WordWrap is False, the font determines the height of the label, and changes to the text cause the label to change in width.</p>
BEVELWIDTH		
	nnn	<p>Use BevelWidth to specify how wide the inner or outer bevel should be. Do not confuse BevelWidth, which is the width of the bevels, with BorderWidth, which is the space between the bevels.</p> <p>If both the BevelInner and BevelOuter properties are bvNone, BevelWidth has no effect. To remove both bevels, set the BevelInner and BevelOuter properties to None, rather than setting the BevelWidth to 0, as this involves less overhead when painting.</p>

BORDERCOLOR

Value	Use this property to specify the color used to fill the region between the inner and outer borders.
Available Values:	
AQUA	
BLACK	
BLUE	
CREAM	
DARK GRAY	
FUCHSIA	
GRAY	
GREEN	
LIME	
LIGHT GRAY	
MAROON	
MEDIUM GRAY	
MINT GREEN	
NAVY	
OLIVE	
PURPLE	
RED	
SILVER	
SKY BLUE	
TEAL	
WHITE	
YELLOW	

BORDERHIGHLIGHT

Value	Use this property to specify the color used when painting highlighted portions of the border.
Available Values:	
AQUA	
BLACK	
BLUE	
CREAM	
DARK GRAY	
FUCHSIA	
GRAY	
GREEN	
LIME	
LIGHT GRAY	
MAROON	
MEDIUM GRAY	
MINT GREEN

BORDERSHADOW

Value	Use this property to specify the color used when painting shadowed portions of the border.
	Available Values:
	AQUA
	BLACK
	BLUE
	CREAM
	DARK GRAY
	FUCHSIA
	GRAY
	GREEN
	LIME
	LIGHT GRAY
	MAROON
	MEDIUM GRAY
	MINT GREEN
	NAVY
	OLIVE
	PURPLE
	RED
	SILVER
	SKY BLUE
	TEAL
	WHITE
	YELLOW

BORDERWIDTH

nnn	Specifies the distance, in pixels, between the outer and inner bevels.
-----	--

CAPTION

CAPTION	Specifies the text string that the Label displays.
	Use Caption to specify the text that the Label displays. To underline a character in a Caption, include the ampersand (&) before the character. This type of character is called an accelerator character.

COLOR

Value Specifies the background color of the control.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

ENABLED

TRUE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FALSE Controls whether the control responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the control to the user. To disable a control, set Enabled to false. Disabled controls appear dimmed. If Enabled is false, the control ignores mouse, keyboard, and timer events.

To re-enable a control, set Enabled to true. The control is no longer dimmed, and the user can use the control.

FLATCOLOR

Value Use this property to specify the color to use in drawing borders set to the Flat style.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

FLYBYCOLOR

Value Use this property to specify the color the label should change to when the mouse is positioned over the label. This property is only used when the FlyByEnabled property is True.

Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE

Form Controls and Properties		Legacy Controls
Control	Property	Value
Legacy Controls		
Unicode Static Text		
HINT		<p>HINT Contains the text string that can appear when the user moves the mouse over the control.</p> <p>Use the Hint property to provide a string of help text either as a Help Hint, or as help text on a particular location such as a status bar.</p> <p>A Help Hint is a box containing help text that appears for a control when the user moves the mouse pointer over the control and pauses momentarily. To set up Help Hints:</p> <p>Specify the Hint property of each control for which a Help Hint should appear. Set the ShowHint property of each appropriate control to true, or set the ParentShowHint property of all controls to true and set the ShowHint property of the form to true. At runtime, set the value of the application's ShowHint property to true.</p> <p>To show the Hint on a status bar or other location, use the OnHint event handler of the application. The application's OnHint event occurs when the mouse pointer moves over the control.</p> <p>Specify a hint to be used for both a Help Hint box and by an OnHint handler by specifying two values separated by a character (the vertical bar "or" symbol). For example,</p> <p>PROPERTY <ComponentID> HINT 'Name Enter Name in the edit box'</p> <p>If Hint contains only one value, the entire string is used as a Help Hint and returned by the GetLongHint function. If a control has no Hint value specified, but its parent control does, the control uses the Hint value of the parent control (as long as the control's ShowHint property is true).</p> <p>Note: If the application's ShowHint property is false, the Help Hint does not appear, but the OnHint event handler is still called.</p>
LEFT		<p>nnn Specifies the horizontal coordinate of the left edge of a component relative to its parent.</p> <p>Use the Left property to determine where the left side of the control begins or to reposition the left side of the control.</p> <p>If the control is contained in another control, the Left and Top properties are relative to the parent control. If the control is contained directly by the form, the property values are relative to the form. For forms, the value of the Left property is relative to the screen in pixels.</p>
LINKTARGET		<p>LINKTARGET Specifies the file name to launch when the Static Text is clicked. The property UseAsLink must also be set to True.</p>

Form

Form Properties

STAY_ON_TOP	<div>ON</div>	This form remains on top of the desktop and of other forms in the project, except any others that also have Form Style set to StayOnTop. If one StayOnTop form launches another, neither form will consistently remain on top.
	<div>OFF</div>	This form remains on top of the desktop and of other forms in the project, except any others that also have Form Style set to StayOnTop. If one StayOnTop form launches another, neither form will consistently remain on top.
SHOW_MINIMIZE_BUTTON	<div>TRUE</div>	Specifies if the form has a Minimize button.
	<div>FALSE</div>	Specifies if the form has a Minimize button.
SHOW_MAXIMIZE_BUTTON	<div>TRUE</div>	Specifies if the form has a Maximize button.
	<div>FALSE</div>	Specifies if the form has a Maximize button.
SHOW_CLOSE_BUTTON	<div>TRUE</div>	The form has a Control menu (also known as a System menu).
	<div>FALSE</div>	The form has a Control menu (also known as a System menu).
DONTSHOWSAVEDIALOG	<div>TRUE</div>	Will suppress "Save Changes?" confirming dialog box upon closing the form.
	<div>FALSE</div>	Will show "Save Changes?" confirming dialog box upon closing the form.
PRINT	<div>PRINTER</div>	Will print the currently displayed form to the current printer.
	<div>PROPORTIONAL</div>	The form is printed to the current printer so that the printed image is approximately the same visible size as on the screen (WYSIWYG).
	<div>FIXEDDPI</div>	Will print the currently displayed form to the current printer, with no special scaling; therefore, the printed form and how the form appears onscreen may appear squished or stretched.
	<div>FITTOPAGE</div>	Will print the currently displayed form to the current printer, using the same screen proportions, but in a size that just fits the printed page.
DISABLECLOSEACTION	<div>TRUE</div>	To Disable [x] Caption Button, [Alt+F4] and [Esc] Key Combination
	<div>FALSE</div>	To Enable [x] Caption Button, [Alt+F4] and [Esc] Key Combination
DONTSHOWDELETEDIALOG	<div>TRUE</div>	<div>Will suppress "Confirm Deletion?" confirming dialog box upon closing the form. Very useful when using "DELROW" command as Custom EEP, especially when customizing your application with your own way of providing the option to delete rows. Use this option as "On After Start EEP" in the related form.</div> <div>Example:</div> <div>PROPERTY RBASE_FORM DONTSHOWDELETEDIALOG 'TRUE'</div> <div>RETURN</div>
	<div>FALSE</div>	Will show "Confirm Deletion?" confirming dialog box upon closing the form.

Form

Form Properties

SCALEBY

nnn Use this property to scale a form and all related controls to s specified screen pixel width.

PROPERTY RBASE_FORM SCALEBY nnnn

The SCALEBY property modifies the Height and Width properties of the form and all controls placed on it, but it does not change the Top and Left properties; therefore, the size of the controls changes, but not the coordinates of the top-left corners of the controls. Thus, it preserves the position of all controls on the form.

If you have developed a form that is 800x600 for the majority of users having a monitor with 800x600 screen resolution to fit the form on the entire available screen, but a few users of your application have a higher resolution (1024x768) and if you wish your 800x600 form to fill the entire screen of a monitor with a resolution of 1024x768, you'll need to use the RBASE_FORM SCALEBY property as follows:

Example:

PROPERTY RBASE_FORM SCALEBY '800'
RETURN

This will scale the original form designed as 800x600 to fill the entire screen even if the screen resolution is higher than 800x600, such as, 1400×1050, 1280x800 or 1024x768.

Notes:

- . The 'value' should be the same as the original form width in order to scale proportionally on the monitors with higher resolution.
- . Use the SCALEBY property within a form's "On After Start" Custom EEP.
- . To take advantage of this feature, make sure to use true type fonts for all form controls.

FILL_SCREEN With the required steps for scaling forms based upon the screen dimensions, themes, borders, etc., an enhanced "fill the screen" scaling of forms has been implemented.

To fill the screen when scaling forms, use the "FILL_SCREEN" parameter.

PROPERTY RBASE_FORM SCALEBY 'FILL_SCREEN'

Notes:

- . Use the SCALEBY property within a form's "On After Start" Custom EEP.
- . To take advantage of this feature, make sure to use true type fonts for all form controls.

Form

Form Properties

THEMENAME

value Use this property to dynamically change the theme.

Syntax:

PROPERTY RBASE_FORM THEMENAME RThemeName

Where RThemeName includes the following options:

- . Deep Cyan
- . Deep Green
- . Deep Orange
- . Funny Theme
- . Gnome
- . Green Glass
- . Longhorn
- . Mac OS
- . Matrix
- . Media
- . One Blue
- . One Clear Blue
- . One Cyan
- . One Green
- . One Orange
- . Orange Glass
- . R:BASE Rocks!
- . Razzmatazz
- . Real One
- . Sports Black
- . Sports Blue
- . Sports Cyan
- . Sports Green
- . Sports Orange
- . Win Native
- . XP Egypt
- . XP Green
- . XP Grey Scale
- . XP Orange
- . XP Silver

Example 01:

PROPERTY RBASE_FORM THEMENAME R:BASE Rocks!
RETURN

Example 02:

PROPERTY RBASE_FORM THEMENAME Razzmatazz
RETURN

Example 03:

PROPERTY RBASE_FORM THEMENAME Longhorn
RETURN

USE_CUSTOM_MENUBAR	<div>ON</div> Specifies to use a custom menu bar for the form. <div>OFF</div> Specifies to use a custom menu bar for the form.	
MENUBAR_USE_FORM_COLOR	<div>ON</div> Specifies to use the form's color for the menu bar. <div>OFF</div> Specifies to use the form's color for the menu bar.	
MENUBAR_HIGHLIGHT_COLOR	<div>Value</div> Specifies the color to be used to draw a highlighted portion of the menu bar.	
MENUBAR_HIGHLIGHT_TEXT_COLOR	<div>Value</div> Specifies the text color to be used to when the menu bar is highlighted.	
MENUBAR_FONT_NAME	<div>Value</div> Specifies the font name/type for the menu bar.	
MENUBAR_FONT_SIZE	<div>Value</div> Specifies the font size for the menu bar.	
MENUBAR_FONT_COLOR	<div>Value</div> Specifies the font color for the menu bar.	
MENUBAR_BACK_COLOR	<div>Value</div> Specifies the background color for the menu bar.	
MENUBAR_FONT_BOLD	<div>ON</div> Specifies if the menu bar font is bold. <div>OFF</div> Specifies if the menu bar font is bold.	

Control	Property	Value
---------	----------	-------

Form

Form Properties

MENUBAR_FONT_ITALIC	<div>ON</div> <div>OFF</div>	<p>Specifies if the menu bar font is italic.</p> <p>Specifies if the menu bar font is italic.</p>
MENUBAR_FONT_UNDERLINE	<div>ON</div> <div>OFF</div>	<p>Specifies if the menu bar font is underline.</p> <p>Specifies if the menu bar font is underline.</p>
MENUBAR_FONT_STRIKEOUT	<div>ON</div> <div>OFF</div>	<p>Specifies if the menu bar font is strikeout.</p> <p>Specifies if the menu bar font is strikeout.</p>
UPDATEDFIELDNAME	<div>VarName</div>	<p>Captures an updated field name after a value changes for a field. This property is only assigned in the (recently introduced) table's "On Field Change" EEP. Using the syntax in any other EEP will return an empty string.</p> <p>Example:</p> <pre>GETPROPERTY RBASE_FORM UPDATEDFIELDNAME 'vEditedColumn'</pre>
SETASACTIVEFORM		<p>Forces the assignment of the "Active Form" to the screen. When several forms are launched with an application progress that moves several form levels deep, an active form may not be perceived as active in remote client environments. This command should only be used in the form's "On After Start" EEP and must be the first command in the EEP.</p> <pre>PROPERTY FormComponentID SETASACTIVEFORM ' ' (Supported syntax based upon PROPERTY FORM_NAME SETASACTIVEFORM ' ')</pre> <p>IMPORTANT: The "On Row Enter" EEP of the form's tables are fired before the form's "On After Start" EEP. So it is important that any PROPERTY/GETPROPERTY calls are executed only after the form's "On After Start" EEP is finished.</p>
ACTIVEMONITOR	<div>n</div>	<p>Specifies the form is moved to the target monitor. The top/left values are preserved.</p> <pre>PROPERTY RBASE_FORM ActiveMonitor 0</pre>
CENTERINMONITOR	<div>n</div>	<p>Moves the form to the center of the target monitor.</p> <pre>PROPERTY RBASE_FORM CenterInMonitor 0</pre>
DROGGEDCOMPID	<div>VarName</div>	<p>Returns the Component ID of a dragged form object.</p> <p>The parameter is valid in the "On Start Drag" EEP only.</p> <p>Example:</p> <pre>GETPROPERTY RBASE_FORM DraggedCompID vDragComponent</pre>

Form

Form Properties

DROPPEDTOCOMPID

VarName

Returns the Component ID for where a dragged object is dropped.

The parameter is valid in the "On Drag Drop" EEP only.

Example:

GETPROPERTY RBASE_FORM DroppedToCompID vDroppedToComponent

SPEAKVALUEONCONTROLEXIT

TRUE

Specifies to allow audible confirmation of content when exiting form controls.

The SPEECH parameter of the PROPERTY command provides speak functionality for defined text. Example: PROPERTY SPEECH SPEAK 'Hello world!'

FALSE

Specifies to disable audible confirmation of content when exiting form controls.

The SPEECH parameter of the PROPERTY command provides speak functionality for defined text. Example: PROPERTY SPEECH SPEAK 'Hello world!'

CHECKREQUIREDVALUES

VarName

Triggers required value checks upon form fields. The functionality checks if a field has a value (not empty), and displays a message if a required value is not present. When enabled, a value for the field is checked when the form is closed. With the GETPROPERTY command, an EEP may be defined as below:

GETPROPERTY RBASE_FORM CheckRequiredValues 'vState'

IF vState = 'OK' THEN

SAVEROW

CLOSEWINDOW

ENDIF

Form Controls and Properties		Form

DONTSHOWSAVEDIALOG		<p>TRUE Will show "Save Changes?" confirming dialog box upon closing the form.</p> <p>FALSE Will show "Save Changes?" confirming dialog box upon closing the form.</p>

Control	Property	Value
---------	----------	-------

Form

MDI Form Properties

ENABLED	TRUE	Controls whether the control responds to mouse, keyboard, and timer events.
	FALSE	Controls whether the control responds to mouse, keyboard, and timer events.
HEIGHT	nnn	Specifies the vertical size of the control in pixels.
HINT	HINT	Contains the text string that can appear when the user moves the mouse over the control.
LEFT	nnn	Specifies the horizontal coordinate of the left edge of a component relative to its parent.
PRINT	PRINTER	Will print currently displayed form to the current printer.
	FIXEDDPI	Will print the currently displayed form to the current printer, with no special scaling; therefore, the printed form and how the form appears onscreen may appear squished or stretched.
	FITTOPAGE	Will print the currently displayed form to the current printer, using the same screen proportions, but in a size that just fits the printed page.
	PROPORTIONAL	The form is printed to the current printer so that the printed image is approximately the same visible size as on the screen (WYSIWYG).

Form

MDI Form Properties

SCALEBY

nnn Use this property to scale a form and all related controls to a specified screen pixel width.

Example:

```
PROPERTY RBASE_FORM SCALEBY nnnn
```

The SCALEBY property modifies the Height and Width properties of the form and all controls placed on it, but it does not change the Top and Left properties; therefore, the size of the controls changes, but not the coordinates of the top-left corners of the controls. Thus, it preserves the position of all controls on the form.

If you have developed a form that is 800x600 for the majority of users having a monitor with 800x600 screen resolution to fit the form on the entire available screen, but a few users of your application have a higher resolution (1024x768) and if you wish your 800x600 form to fill the entire screen of a monitor with a resolution of 1024x768, you'll need to use the RBASE_FORM SCALEBY property as follows:

Example:

```
PROPERTY RBASE_FORM SCALEBY '800'  
RETURN
```

This will scale the original form designed as 800x600 to fill the entire screen even if the screen resolution is higher than 800x600, such as, 1400x1050, 1280x800 or 1024x768.

Notes:

- . The 'value' should be the same as the original form width in order to scale proportionally on the monitors with higher resolution.
- . Use the SCALEBY property within a form's "On After Start" Custom EEP.
- . To take advantage of this feature, make sure to use true type fonts for all form controls.

FILL_SCREEN With the required steps for scaling forms based upon the screen dimensions, themes, borders, etc., an enhanced "fill the screen" scaling of forms has been implemented.

To fill the screen when scaling forms, use the "FILL_SCREEN" parameter.

```
PROPERTY RBASE_FORM SCALEBY 'FILL_SCREEN'
```

Notes:

- . Use the SCALEBY property within a form's "On After Start" Custom EEP.
- . To take advantage of this feature, make sure to use true type fonts for all form controls.

SHOWHINT

TRUE Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.

FALSE Determines whether the control displays a Help Hint when the mouse pointer rests momentarily on the control.

SHOW_CLOSE_BUTTON

TRUE The form has a Control menu (also known as a System menu).

FALSE The form has a Control menu (also known as a System menu).

Form Controls and Properties		Form
Control	Property	Value
<div>Form</div> <div>MDI Form Properties</div>		
SHOW_MAXIMIZE_BUTTON	TRUE	Specifies if the form has a Maximize button.
	FALSE	Specifies if the form has a Maximize button.
SHOW_MINIMIZE_BUTTON	TRUE	Specifies if the form has a Minimize button.
	FALSE	Specifies if the form has a Minimize button.
STAY_ON_TOP	ON	This form remains on top of the desktop and of other forms in the project, except any others that also have Form Style set to StayOnTop. If one StayOnTop form launches another, neither form will consistently remain on top.
	OFF	This form remains on top of the desktop and of other forms in the project, except any others that also have Form Style set to StayOnTop. If one StayOnTop form launches another, neither form will consistently remain on top.
TASKBARBUTTON	TRUE	Specifies whether the form minimizes to the Windows Taskbar as a button.
	FALSE	Specifies whether the form minimizes to the Windows Taskbar as a button.

Form

MDI Form Properties

TOP

nnn Specifies the Y coordinate of the top left corner of a control, relative to its parent or containing control in pixels.

TRANSPARENTCOLOR

TRUE Specifies whether a color on the form appears transparent.

Description

Use Transparent Color to indicate that one of the colors on the form should be treated as transparent, allowing windows behind the form to completely show through. The TransparentColorValue property indicates the color that appears completely transparent.

Note: To make the entire form transparent, or to make it translucent rather than transparent, use the AlphaBlend and AlphaBlendValue properties.
Note: TransparentColor does not work on all systems. The application must be running under Windows 2000 or better, and the machine must be a P90 or better.

FALSE Specifies whether a color on the form appears transparent.

Description

Use Transparent Color to indicate that one of the colors on the form should be treated as transparent, allowing windows behind the form to completely show through. The TransparentColorValue property indicates the color that appears completely transparent.

Note: To make the entire form transparent, or to make it translucent rather than transparent, use the AlphaBlend and AlphaBlendValue properties.
Note: TransparentColor does not work on all systems. The application must be running under Windows 2000 or better, and the machine must be a P90 or better.

TRANSPARENTCOLORVALUE

nnn Indicates the color on the form that appears transparent when TransparentColor is True.

Description

Use TransparentColorValue to indicate the color that appears transparent when the TranparentColor property is True.

Note: If the application uses a 16-bit color palette, TransparentColorValue must be a basic (nonblended) color.

WIDTH

nnn Specifies the horizontal size of the control or form in pixels.

Form Controls and Properties		Form
Control	Property	Value
<div>Form</div> <div>MDI Form Properties</div>		
WINDOW_STATE		<div> <div>NORMAL</div> <div> WINDOW_STATE indicates whether a form is maximized, minimized, or normally sized. Values: <div> <div>NORMAL</div> <div>The form is in its normal state (that is, neither minimized nor maximized).</div> </div> <div> <div>MINIMIZED</div> <div>The form is minimized.</div> </div> <div> <div>MAXIMIZED</div> <div>The form is maximized.</div> </div> </div> </div>

Form

MDI Form Properties

CAPTURE_FROM_SCREEN

FileName Captures an image of the current screen in an image file. The entire screen, or a specified area can be captured.

This command works with JPEG and BMP images file output only. If the .JPG or .JPEG file extension is specified, the image format will be stored as JPEG. All other file extensions will be considered as the bitmap file format.

Examples:

```
-- to capture the full screen to a JPG file
PROPERTY RBASE_FORM CAPTURE_FROM_SCREEN 'c:\Screen_FullCapture.jpg'
```

```
-- to capture part of screen to a BMP file
PROPERTY RBASE_FORM 'CAPTURE_FROM_SCREEN|23, 24, 934, 800'
'c:\Screen_AreaCapture.bmp'
```

CLIPBOARD Captures an image of the current screen and places the content in the clipboard. The entire screen, or a specified area can be captured.

Examples:

```
-- to capture the full screen to the clipboard
PROPERTY RBASE_FORM CAPTURE_FROM_SCREEN CLIPBOARD
```

```
-- to capture part of screen to to the clipboard
PROPERTY RBASE_FORM 'CAPTURE_FROM_SCREEN|23, 24, 934, 800' CLIPBOARD
```

CAPTURE_FROM_WINDOW

CLIPBOARD Captures an image of the current window and places the content in the clipboard. The entire window, or a specified area can be captured.

Examples:

```
-- to capture full form to a BMP file
PROPERTY RBASE_FORM CAPTURE_FROM_WINDOW CLIPBOARD
```

```
-- to capture part of the form to a JPG file
PROPERTY RBASE_FORM 'CAPTURE_FROM_WINDOW|12,12,134,300' CLIPBOARD
```

FileName Captures an image of the current window and places the content in an image file. The entire window or a specified area can be captured.

This command works with JPEG and BMP images file output only. If the .JPG or .JPEG file extension is specified, the image format will be stored as JPEG. All other file extensions will be considered as the bitmap file format.

Examples:

```
-- to capture full form to a BMP file
PROPERTY RBASE_FORM CAPTURE_FROM_WINDOW 'c:\Window__FullCapture.bmp'
```

```
-- to capture part of the form to a JPG file
PROPERTY RBASE_FORM 'CAPTURE_FROM_WINDOW|12,12,134,300'
'c:\Window_AreaCapture.jpg'
```

Form Controls and Properties		Form
Control	Property	Value
<div>Form</div> <div>MDI Form Properties</div>		
MENUBAR_FONT_SIZE	Value	Specifies the font size for the menu bar.
MENUBAR_FONT_COLOR	Value	Specifies the font color for the menu bar.
MENUBAR_BACK_COLOR	Value	Specifies the background color for the menu bar.
MENUBAR_FONT_BOLD	ON OFF	Specifies if the menu bar font is bold.
MENUBAR_FONT_ITALIC	ON OFF	Specifies if the menu bar font is italic.
MENUBAR_FONT_UNDERLINE	ON OFF	Specifies if the menu bar font is underline.
MENUBAR_FONT_STRIKEOUT	ON OFF	Specifies if the menu bar font is strikeout.
ACTIVEMONITOR	n	Specifies the form is moved to the target monitor. The top/left values are preserved. PROPERTY RBASE_FORM ActiveMonitor 0
CENTERINMONITOR	n	Moves the form to the center of the target monitor. PROPERTY RBASE_FORM CenterInMonitor 0
UPDATEDFIELDNAME	VarName	Captures an updated field name after a value changes for a field. This property is only assigned in the (recently introduced) table's "On Field Change" EEP. Using the syntax in any other EEP will return an empty string. Example: GETPROPERTY RBASE_FORM UPDATEDFIELDNAME 'vEditedColumn'
DROPPEDCOMPID	VarName	Returns the Component ID of a dragged form object. The parameter is valid in the "On Start Drag" EEP only. Example: GETPROPERTY RBASE_FORM DraggedCompID vDragComponent

Form

MDI Form Properties

DROPPEDTOCOMPID

VarName Returns the Component ID for where a dragged object is dropped.

The parameter is valid in the "On Drag Drop" EEP only.

Example:

```
GETPROPERTY RBASE_FORM DroppedToCompID vDroppedToComponent
```

SPEAKVALUEONCONTROLEXIT

TRUE Specifies to allow audible confirmation of content when exiting form controls.

The SPEECH parameter of the PROPERTY command provides speak functionality for defined text. Example: PROPERTY SPEECH SPEAK 'Hello world!'

FALSE Specifies to allow audible confirmation of content when exiting form controls.

The SPEECH parameter of the PROPERTY command provides speak functionality for defined text. Example: PROPERTY SPEECH SPEAK 'Hello world!'

CHECKREQUIREDVALUES

VarName Triggers required value checks upon form fields. The functionality checks if a field has a value (not empty), and displays a message if a required value is not present. When enabled, a value for the field is checked when the form is closed. With the GETPROPERTY command, an EEP may be defined as below:

```
GETPROPERTY RBASE_FORM CheckRequiredValues 'vState'  
IF vState = 'OK' THEN  
    SAVEROW  
    CLOSEWINDOW  
ENDIF
```

Control	Property	Value

Table

Table
Table Properties

Form Controls and Properties		Table
Control	Property	Value
Table		
Table Properties		
<FormTableName>		
	APPEND	Adds a new, empty record to the end of the dataset.
	CANCEL	Cancels modifications to the active record if those changes are not yet posted.
	DELETE	Deletes the active record and positions the dataset on the next record.
	EDIT	Enables editing of data in the dataset.
	FIRST	Moves to the first record in the dataset.
	LAST	Moves to the last record in the dataset.
	NEXT	Moves to the next record in the dataset.
	POST	Writes a modified record to the database.
	PRIOR	Moves to the previous record in the dataset.
	REFRESH	Refetches data from the database to update a dataset's view of data.
ENABLE_DELETE_ROWS		To enable the option for "Delete Rows".
	UPDATE	Use this property to push the control buffer data to the virtual (form) buffer, then SAVEROW writes to the underlying recordset.
		Example:
		PROPERTY TABLE <FormTableName> 'UPDATE'
		SAVEROW
		RETURN
	CLOSE	Use this property command to close the dataset.
		Example:
		PROPERTY TABLE <tablename> 'CLOSE'
		RETURN
	OPEN	Use this property command to open the dataset.
		Example:
		PROPERTY TABLE <FormTableName> 'OPEN'
		RETURN
	JUMP	Syntax:
		PROPERTY TABLE FormTable 'JUMP relPos'
		Where:
		FormTable is the appointed table by property
		relPos is the relative number of jumps forward positive or backward with negative value
		Purpose: Will force focus to pointed record within a DBGrid or Scrolling Region, depending on the current record-position.
	JUMPTO	Forces the focus to a record within an Enhanced DB Grid, DB Grid, or Scrolling Region, independent of the current record.
		Syntax:
		PROPERTY TABLE FormTable 'JUMPTO absPos'

Page 946 of 1033		

Form Controls and Properties		Table
Control	Property	Value

Table

Table Properties

<FormTableName>

Where:

FormTable is the appointed table by property

absPos is the absolute record to jump to, positive only or backward with negative value

Example:

PROPERTY TABLE Customer 'JUMPTO 12'

INSERT

Inserts a new, empty record at the current possition of the dataset, such as in Scrolling Region.

READONLY TRUE

Specifies the form table "read only" status.

Syntax:

PROPERTY TABLE <FormTable> 'READONLY TRUE'

RETURN

RestoreOrderBy

Restores the default data set sort order for a DB Grid.

APPEND_DUPLICATE

Use the following PROPERTY command to take a currently selected row and append it to the end of the table to duplicate all the fields into a new row.

ENABLE_ADD_NEW_ROWS

To enable the option for "Add New Rows to the Table".

DISABLE_ADD_NEW_ROWS

To disable the option for "Add New Rows to the Table".

ENABLECONTROLS

Use this property command to enable all controls related to the given table.

Example:

PROPERTY TABLE <FormTableName> 'ENABLECONTROLS'

RETURN

DISABLECONTROLS

Use this property command to disable all controls related to the given table.

Example:

PROPERTY TABLE <FormTableName> 'DISABLECONTROLS'

RETURN

READONLY FALSE

Specifies the form table "read only" status.

Syntax:

PROPERTY TABLE <FormTable> 'READONLY FALSE'

RETURN

DUPLICATE

Use the following PROPERTY command to DUPLICATE a row for any given table related to a form.

Example:

PROPERTY TABLE <FormTableName> 'DUPLICATE'

RETURN

DISABLE_DELETE_ROWS

To disable the option for "Delete Rows".

Table

Table Properties

'FormTableName->RECORDCOUNT'

varname Supported parameter for GETPROPERTY command only.

Use this option to get the record count of given form table.

Syntax:

GETPROPERTY TABLE 'FormTableName->RECORDCOUNT' varname

Notice the database QUOTE character surrounding the 'FormTableName->command'.

Example 01:

```
CLEAR VAR vRecordCount, vRecNo, vRecInfo
SET VAR vRecordCount TEXT = NULL
GETPROPERTY TABLE 'Customer->RECORDCOUNT' vRecordCount
RETURN
```

Variable vRecordCount will return the number of total records in the Customer table associated with the form.

'FormTableName->RECNO'

varname Supported parameter for GETPROPERTY only.

Use this option to retrieve the record number of selected/focused record in the form.

Syntax:

GETPROPERTY TABLE 'FormTableName->RECNO' varname

Notice the database QUOTE character surrounding the 'FormTableName->command'.

Example 01:

```
CLEAR VAR vRecNo
SET VAR vRecNo TEXT = NULL
GETPROPERTY TABLE 'Customer->RECNO' vRecNo
RETURN
```

Variable vRecno will return the record number of selected/focused record on the form associated with the Customer table.

Table

Table Properties

'FormTableName SEARCH->ColumnName->'

value Use this option to search for text within a given column of a form table.

Syntax:

```
PROPERTY TABLE FormTableName SEARCH->FormColumnName-> VarName
```

Notes:

- . The parameter is supported for the PROPERTY command only.
- . The search method uses CONTAINS (partial search) by default to locate any text, which matches the provided criteria.
- . To search using EQUALS (exact search), add a equal character and enclose the SEARCH criteria in quotes .

Example 01:

```
--Where the following command is used within a "On DB Grid Cell Click" EEP
--and a Variable Edit field "contains" the search criteria.
--GETPROPERTY DBGrid_Customer CurrentColumnName vColumnName
```

```
SET VAR vSearchString TEXT = NULL
SET VAR vSearchString = +
('PROPERTY TABLE Customer SEARCH->'+.vColumnName+ '->'+.vSearchValue)
&vSearchString
RETURN
```

Example 02:

```
--Where the following command is used within a "On DB Grid Cell Click" EEP
--and a Variable Edit field "equals" the search criteria.
--GETPROPERTY DBGrid_Customer CurrentColumnName vColumnName
```

```
SET VAR vSearchString TEXT = NULL
SET VAR vSearchString = +
('PROPERTY TABLE Customer "SEARCH->'+.vColumnName+ '->=('+.vSearchValue+')')')
&vSearchString
RETURN
```

'FormTableName->FILTEREDRECORDCOUNT'

VarName Return the record count for all visible records for the filtered dataset of an Enhanced DB Grid.

If table is not "Filtered", the FilteredRecordCount value will be the same as the RecordCount value.

Example:

```
GETPROPERTY TABLE Customers->FilteredRecordCount vRecCount
PAUSE 2 USING .vRecCount
RETURN
```

'FormTableName->FILTEREDWHERE'

VarName After the "Filter Setup" is launched, [Ctrl]+[L], and conditions are selected for an Enhanced DB Grid, the GETPROPERTY command can be used to return the current filter as a WHERE Clause.

This is helpful if the current record set needs captured for export, report output, or used elsewhere.

Example:

```
GETPROPERTY TABLE Customers->FILTEREDWHERE vCustWhere
```

Form Controls and Properties		Table		
Control	Property	Value		
<table><tr><td>Table</td></tr><tr><td>Table Properties</td></tr></table>			Table	Table Properties
Table				
Table Properties				
'TableName->STATE'	VarName	Captures the state of the current row of a table. The possible return values are: ENTER, EDIT, BROWSE. GETPROPERTY TABLE 'InvoiceDetail->STATE' vInvDetState		
'FormTableName->SORTEDROWS'	VarName	Captures the ORDER BY sort of the table, either from the initial launch or after form changes, perhaps within a grid.		
'FormTableName->CURRENTWHERE'	VarName	Captures the current WHERE Clause for the table.		
'FormTableName->CURRENTSORT'	VarName	Captures the ORDER BY sort of the table, either from the initial launch or after form changes, perhaps within a grid.

Form Controls and Properties		Miscellaneous
Control	Property	Value
<div>Miscellaneous</div> <div>  </div>		
Miscellaneous		
Miscellaneous Properties		
SET_FOCUS	<div>TRUE</div> <p>Gives the input focus to the control. If parent form is not the active form, it will become the active form as well.</p> <p>SET_FOCUS may demonstrate negative effects in some scenarios, as its use steals the focus on a global level. That means, if a control in a non active form gets a SET_FOCUS, the non active form becomes the active form and the control is given the focus. This behavior does not blend well with popup forms (Pop-up Menu, CHOOSE, etc.) that are shown during focus transition.</p> <p>As such, SET_ACTIVE_CONTROL or DELAYED_SET_ACTIVE_CONTROL is recommended.</p>	
FONT_BOLD	<div>TRUE</div> <p>Specifies if the font is boldfaced.</p> <div>FALSE</div> <p>Specifies if the font is boldfaced.</p>	
FONT_ITALIC	<div>TRUE</div> <p>Specifies if the font is italicized.</p> <div>FALSE</div> <p>Specifies if the font is italicized.</p>	
FONT_UNDERLINE	<div>TRUE</div> <p>Specifies if the font is underlined.</p> <div>FALSE</div> <p>Specifies if the font is underlined.</p>	
FONT_STRIKEOUT	<div>TRUE</div> <p>Specifies if the font is displayed with a horizontal line through it.</p> <div>FALSE</div> <p>Specifies if the font is displayed with a horizontal line through it.</p>	
FONT_NAME	<div>FONT_NAME</div> <p>Identifies the typeface of the font.</p>	
FONT_SIZE	<div>nnn</div> <p>Specifies the height of the font in points.</p>	

Miscellaneous

Miscellaneous Properties

FONT_COLOR

Value Specifies the color of the text.

Available Values:

- AQUA
- BLACK
- BLUE
- CREAM
- DARK GRAY
- FUCHSIA
- GRAY
- GREEN
- LIME
- LIGHT GRAY
- MAROON
- MEDIUM GRAY
- MINT GREEN
- NAVY
- OLIVE
- PURPLE
- RED
- SILVER
- SKY BLUE
- TEAL
- WHITE
- YELLOW

ANCHORS

- LEFT, TOP, RIGHT, BOTTOM** To control the current position relative to an edge of its parent.
- LEFT, TOP** To control the current position relative to an edge of its parent.
- LEFT, TOP, RIGHT** To control the current position relative to an edge of its parent.
- LEFT, TOP, BOTTOM** To control the current position relative to an edge of its parent.
- LEFT, RIGHT** To control the current position relative to an edge of its parent. If a control has its Anchors property set to 'LEFT, RIGHT', the control stretches when the width of its parent changes.

BRING_TO_FRONT

- TRUE** Specifies if the control is sent to the top layer when using controls piled on top of one another.
- FALSE** Specifies if the control is sent to the top layer when using controls piled on top of one another.

SEND_TO_BACK

- FALSE** Specifies if the control is sent to the bottom layer when using controls piled on top of one another.
- TRUE** Specifies if the control is sent to the bottom layer when using controls piled on top of one another.

Miscellaneous

Miscellaneous Properties

SHOWFOCUSRECT	TRUE	Specifies if the focus rectangle, that appears on form objects in the tab order, will be displayed.
	FALSE	Specifies if the focus rectangle, that appears on form objects in the tab order, will be displayed.
TRANSPARENT	TRUE	Specifies if the control background will become transparent to the parent object.
	FALSE	Specifies if the control background will become transparent to the parent object.
THEMEAWARE	TRUE	Determines whether or not to alter the control based upon Windows operating system themes.
	FALSE	Determines whether or not to alter the control based upon Windows operating system themes.
HINTFONTNAME	HINTFONTNAME	Identifies the typeface font of the hint.
HINTFONTSIZE	nnn	Specifies the height of the hint font in points.
HINTFONTCOLOR	Value	Specifies the color of the hint text.
HINTFONTSTYLE	Value	Specifies the hint text style. Options include: <ul style="list-style-type: none">. Regular. Bold. Italic. Bold Italic
LIGHTTEXTSTYLE	TRUE	Specifies whether the Highlight Color is used to give the caption a three dimensional appearance.
	FALSE	Specifies whether the Highlight Color is used to give the caption a three dimensional appearance.

Miscellaneous

Miscellaneous Properties

GRADIENTCOLORSTYLE	<div>Value</div> <div>Specifies the gradient color style when the control's VisualStyle property is set to Gradient.</div> <div>Options:</div> <div><div>. System (default)</div><div>. MSOffice</div><div>. Custom</div></div> <div>The option System obtains the gradient color values needed by the control from the current system colors. This value ensures that the control looks appealing regardless of the users current color scheme.</div> <div>The MSOffice option mimics the Microsoft Office 2003 look when XP themes are active (i.e. blue, green, and silver backgrounds for toolbars, etc.). If XP themes are not present, then the control will utilize the System option.</div> <div>The Custom option allows to specify custom start and stop color values for the gradients used in the control.</div>
GRADIENTCOLORSTART	<div>Value</div> <div>Specifies the starting color that is used in defining a gradient color fill.</div>
GRADIENTCOLORSTOP	<div>Value</div> <div>Specifies the stopping color that is used in defining a gradient color fill.</div>
GRADIENTDIRECTION	<div>Value</div> <div>Specifies the direction the gradient fill will flow.</div> <div>Options include:</div> <div><div>. BigSquareBox - Top and bottom converge together to form a big square box in the center</div><div>. DiagonalDown - Top right to bottom left</div><div>. DiagonalUp - Top left to bottom right</div><div>. HorizontalBox - Top and bottom converge together to form a box in the center</div><div>. HorizontalCenter - Top and bottom converge to the center</div><div>. HorizontalEnd - Horizontally downward</div><div>. SquareBox - All sides converge into a square</div><div>. VerticalBox - Sides converge into a box</div><div>. VerticalCenter - Sides converge into a box at the center</div></div>
VISUALSTYLE	<div>Value</div> <div>Specifies the general appearance of the control.</div> <div>Options:</div> <div><div>. Classic</div><div>. WinXP</div><div>. Gradient</div></div> <div>The Classic style setting indicates that the control will take on the pre-WinXP style (i.e. classic).</div> <div>The WinXP style utilizes Windows XP themes (if they are present).</div> <div>The Gradient style gives the control a more modern appearance.</div>

Form Controls and Properties		Miscellaneous
Control	Property	Value
Miscellaneous		
Miscellaneous Properties		
HINT		
	HINT	Contains the text string that can appear when the user moves the mouse over the control.
VISIBLE		
	FALSE	Determines whether the component appears on screen.
	TRUE	Determines whether the component appears on screen.
ALIGNMENT		
	CENTER	Text is centered in the control.
	LEFT	Text is left-justified: Lines all begin at the left edge of the control.
	RIGHT	Text is right-justified: Lines all end at the right edge of the control.
TABORDER		
	nn	Indicates the position of the control in its parent's tab order.
TABSTOP		
	FALSE	Determines if the user can tab to a control.
	TRUE	Determines if the user can tab to a control.
READONLY		
	FALSE	Determines whether the user can change the text of the edit control.
	TRUE	Determines whether the user can change the text of the edit control.
COLOR		
	Value	Specifies the background color of the control.
AUTOSIZE		
	TRUE	Use AutoSize to make the control adjust its size automatically so the client area accommodates the height and width of the text. When AutoSize is False, the control is fixed in size. When AutoSize is True, the size of the control readjusts whenever the text changes. The size of the control is also readjusts when the Font property changes. If applies, when WordWrap is True, the width of the control is fixed. If AutoSize is also True, changes to the text cause the control to change in height. When AutoSize is True and WordWrap is False, the font determines the height of the control, and changes to the text cause the control to change in width.
	FALSE	Use AutoSize to make the control adjust its size automatically so the client area accommodates the height and width of the text. When AutoSize is False, the control is fixed in size. When AutoSize is True, the size of the control readjusts whenever the text changes. The size of the control is also readjusts when the Font property changes. If applies, when WordWrap is True, the width of the control is fixed. If AutoSize is also True, changes to the text cause the control to change in height. When AutoSize is True and WordWrap is False, the font determines the height of the control, and changes to the text cause the control to change in width.
WORDWRAP		
	TRUE	Specifies whether the control text wraps when it is too long for the width of the control.
	FALSE	Specifies whether the control text wraps when it is too long for the width of the control.

Miscellaneous

Miscellaneous Properties

DISPLAYFORMAT

Value Specifies the display format for the control.

Examples:

```
PROPERTY CI_LastUpdate DISPLAYFORMAT 'dddd, mmmm dd, yyyy'  
PROPERTY CI_UpdateTime DISPLAYFORMAT 'h:nn:ss AM/PM'  
PROPERTY CI_TotalAmount DISPLAYFORMAT '#,0.00; -#,0.00'  
PROPERTY CI_FinalCalib DISPLAYFORMAT '#.#,E+00'
```

ATTACH_ROSK

TRUE Attaches the ROSK (R:BASE On-Screen Keyboard) to a parent control (Enhanced Panel, Enhanced Group Box, Enhanced Tab Page, etc.) and embeds the keyboard into the form

```
PROPERTY ComponentID ATTACH_ROSK TRUE
```

The following detaches the ROSK from an attached form control:

```
PROPERTY ROSK DETACH TRUE
```

Miscellaneous

Miscellaneous Properties

ACCEPT_FILE_DROP

TRUE

Specifies a control to accept dragged files from Windows Explorer.

Once dropped to the target control, R:BASE retrieves the file name of the dragged file. The file names are captured in comma separated format. After the files names were retrieved and actions performed, the list must be cleared. This only clears the internal list of files that were dropped, not the actual files.

Form controls which can accept a dropped object include those which can accept focus (e.g. Edits, Memos, Enhanced Panels, etc.).

Example:

-- Allow a control to accept dragged files:
PROPERTY DropTarget ACCEPT_FILE_DROP TRUE

-- Get list of files that were dropped to a control (executed within the On Drag Drop EEP):
GETPROPERTY DropTarget DROPPED_FILES vDroppedFileList

-- Clears the internal list of files that were dropped:
PROPERTY FileList_MemoControl CLEAR_DROPPED_FILES ' '

FALSE

Specifies a control to accept dragged files from Windows Explorer.

Once dropped to the target control, R:BASE retrieves the file name of the dragged file. The file names are captured in comma separated format. After the files names were retrieved and actions performed, the list must be cleared. This only clears the internal list of files that were dropped, not the actual files.

Form controls which can accept a dropped object include those which can accept focus (e.g. Edits, Memos, Enhanced Panels, etc.).

Example:

-- Allow a control to accept dragged files:
PROPERTY DropTarget ACCEPT_FILE_DROP TRUE

-- Get list of files that were dropped to a control (executed within the On Drag Drop EEP):
GETPROPERTY DropTarget DROPPED_FILES vDroppedFileList

-- Clears the internal list of files that were dropped:
PROPERTY FileList_MemoControl CLEAR_DROPPED_FILES ' '

Control	Property	Value

Miscellaneous

Miscellaneous Properties

ACCEPT_MAIL_DROP	TRUE	<p>Specifies a control to accept dragged email from MS Outlook.</p> <p>Once dropped to the target control, R:BASE retrieves the file name of the dragged email. The file names are captured in comma separated format. Dropped emails are saved as files in the TEMP folder. It is the responsibility of the R:BASE application to delete the files when no longer needed. After the files names were retrieved and actions performed, the list must be cleared. This only clears the internal list of files that were dropped, not the actual files.</p> <p>Form controls which can accept a dropped object include those which can accept focus (e.g. Edits, Memos, Enhanced Panels, etc.).</p> <p>Example:</p> <pre>-- Allow a control to accept dragged email: PROPERTY DropTarget ACCEPT_MAIL_DROP TRUE -- Get list of email that were dropped to a control (executed within the On Drag Drop EEP): GETPROPERTY DropTarget DROPPED_FILES vDroppedFileList -- Clears the internal list of email that were dropped: PROPERTY FileList_MemoControl CLEAR_DROPPED_FILES ' '</pre>
	FALSE	<p>Specifies a control to accept dragged email from MS Outlook.</p> <p>Once dropped to the target control, R:BASE retrieves the file name of the dragged email. The file names are captured in comma separated format. Dropped emails are saved as files in the TEMP folder. It is the responsibility of the R:BASE application to delete the files when no longer needed. After the files names were retrieved and actions performed, the list must be cleared. This only clears the internal list of files that were dropped, not the actual files.</p> <p>Form controls which can accept a dropped object include those which can accept focus (e.g. Edits, Memos, Enhanced Panels, etc.).</p> <p>Example:</p> <pre>-- Allow a control to accept dragged email: PROPERTY DropTarget ACCEPT_MAIL_DROP TRUE -- Get list of email that were dropped to a control (executed within the On Drag Drop EEP): GETPROPERTY DropTarget DROPPED_FILES vDroppedFileList -- Clears the internal list of email that were dropped: PROPERTY FileList_MemoControl CLEAR_DROPPED_FILES ' '</pre>

Form Controls and Properties		Miscellaneous
Control	Property	Value
Miscellaneous		
Miscellaneous Properties		
DELAYED_SET_ACTIVE_CONTROL	TRUE	<p>Gives the input focus to the control. If parent form is not the active control, the focus switch will happen when the parent form becomes the active form.</p> <p>DELAYED_SET_ACTIVE_CONTROL gains focus in a more respectful way in comparison to SET_FOCUS. If DELAYED_SET_ACTIVE_CONTROL is used, the control will have focus if the parent form is the active form (works like SET_FOCUS). However, if the parent form is not the active form, the control will get the focus when the parent form becomes the active form. The "parent form recognition" is the difference maker. The PROPERTY command use does not get in the way of other forms. The focus switch implemented uses PostMessage(), a safer cross-origin communication between Windows objects, and allows the focus cycle to be completed before a new focus switch cycle is started. The focus switch is basically "delayed" when compared to SET_ACTIVE_CONTROL.</p> <p>Because it can be cumbersome to change SET_FOCUS into SET_ACTIVE_CONTROL or DELAYED_SET_ACTIVE_CONTROL in many places, a newly added APPLICATION property was implemented to treat SET_FOCUS commands as the different "focus" counterpart.</p> <p>PROPERTY APPLICATION DELAYED_FOCUS_SWITCH ON</p> <p>When ON, SET_FOCUS, SET_ACTIVE_CONTROL, and SKIP will work like DELAYED_SET_ACTIVE_CONTROL.</p>
DELAYED_SET_FOCUS	TRUE	<p>Gives the input focus to the control. If parent form is not the active form, it will become the active form as well.</p> <p>With DELAYED_SET_FOCUS, the focus switch implemented uses PostMessage(), a safer cross-origin communication between Windows objects, and allows the focus cycle to be completed before a new focus switch cycle is started. The focus switch is basically "delayed."</p> <p>DELAYED_SET_FOCUS may demonstrate negative effects in some scenarios, as its use steals the focus on a global level. That means, if a control in a non active form gets a DELAYED_SET_FOCUS, the non active form becomes the active form and the control is given the focus. This behavior does not blend well with popup forms (Pop-up Menu, CHOOSE, etc.) that are shown during focus transition.</p> <p>As such, SET_ACTIVE_CONTROL or DELAYED_SET_ACTIVE_CONTROL is recommended.</p>
ATTACH_CTRL	<ChildCompID>	<p>Allows changing an object's parent control at runtime. Issuing the command will move the child control to the parent control, and maintains the same top and left coordinates.</p> <p>Example:</p> <p>PROPERTY GroupBox ATTACH_CTRL LoadButton</p>
MAKEDBLCLICK		<p>Specifies to fire the "On Double Click" EEP for the control, simulating a mouse double click. The last parameter will accept any value for the PROPERTY command.</p> <p>Syntax:</p> <p>PROPERTY CustomerName MAKEDBLCLICK ' '</p>

Miscellaneous

Miscellaneous Properties

MAKERIGHTCLICK

Specifies to fire the "On Right Click" EEP for the control, simulating a mouse right click. The last parameter will accept any value for the PROPERTY command.

Syntax:

```
PROPERTY CustomerList MAKERIGHTCLICK ' '
```

Form Actions

Form Actions

Form Action

<CUSTOMFORMACTIONCOMMANDNAME>

parameters CustomFormActionCommandName is the actual name of the Command Name assigned when designing Custom Form Actions in Form Designer.

Parameters is the optional value(s) you can pass onto the calling command, if required. Use ' ' blank space with single or double quotes (depending on your database QUOTE settings), if parameter is not required in calling command block.

Examples:

Let's say we have three Custom Form Actions, namely:

- MyPAUSECommand
- MyDIALOGCommand
- MyPRINTCommand

To call MyPAUSECommand in an EEP, use the following PROPERTY command:

```
PROPERTY RBASE_FORM_ACTION MyPAUSECommand ' '  
RETURN
```

To call MyDIALOGCommand in an EEP, use the following PROPERTY command:

```
PROPERTY RBASE_FORM_ACTION MyDIALOGCommand ' '  
RETURN
```

To call MyPRINTCommand in an EEP, use the following PROPERTY command, assuming that you would like to print the report, for example, CustomerYellowPages as an HTML document.

```
PROPERTY RBASE_FORM_ACTION MyPRINTCommand 'USING  
CustomerYellowPages HTML'  
RETURN
```

The last parameter 'USING CustomerYellowPages PDF' in PROPERTY command will be passed on to MyPRINTCommand. MyPRINTCommand requires two parameters (vReportName and vReportOutput). The first parameter CustomerYellowPages as %1 will be passed for the variable vReportName and the second parameter HTML as %2 will be passed for the variable vReportOutPut in MyPRINTCommand.

Note: Use a blank space to separate multiple parameters as described in above example.

Application

Application Properties

WALKMENUTIMEINTERVAL

nnn When using WALKMENU, you can control the time interval that keystrokes are recognized. The default value is set to 1500 ms.

For example:
1000 for 1 second
1500 for 1.5 seconds

You may also alter the WALKMENU time interval setting from within the R:BASE main Menu Bar under "Settings".

ISCOMPILED

varname Will return a variable value to find out if the running application is using the full version of R:BASE, or is a compiled application.

GETPROPERTY APPLICATION ISCOMPILED varname

The resulting TEXT variable value will be YES or NO.

The parameter is supported for the GETPROPERTY command only.

CLEANSCRATCHFILESONEXIT

TRUE Specifies if R:BASE will delete the scratch files (.\$\$\$) upon exit of the application.

FALSE Specifies if R:BASE will delete the scratch files (.\$\$\$) upon exit of the application.

ISRUNTIME

varname Will return a variable value to find out if the running application is using the full version of R:BASE, or Runtime for R:BASE.

Example:

GETPROPERTY APPLICATION ISRUNTIME varname

The resulting TEXT variable value will be YES or NO.

The parameter is supported for the GETPROPERTY command only.

STARTUPPARAMCOUNT

VarName Returns the startup parameter count for the executable.

This allows parameters to be passed to any R:BASE instance, Runtime, and compiled application.

Notes:

- . This parameter is used with STARTUPPARAMSTRnnn
- . This parameter can only be used with the GETPROPERTY command.

Example:

GETPROPERTY Application StartupParamCount vParamCount

Control	Property	Value
---------	----------	-------

Application

Application Properties

STARTUPPARAMSTRnnn	<div><div>VarName</div><div>Returns the startup parameter value by the number specified, where "NNNN" in StartupParamStrNNNN is the a number from 0 to STARTUPPARAMCOUNT.</div><div>This allows parameters to be passed to any R:BASE instance, Runtime, and compiled application.</div><div>Notes:<ul style="list-style-type: none">. This parameter is used with STARTUPPARAMCOUNT. if NNNN = 0 (GETPROPERTY APPLICATION StartupParamStr0 VarName) then VarName will always contain the executable name with path. if NNNN > STARTUPPARAMCOUNT then VarName will contain the text: "-ERROR-". This parameter can only be used with the GETPROPERTY command.</div><div>Example to Display Parameters:</div><div>In the desktop shortcut, the "Target:" can read: C:\RBT\RBG95_32\RBG95_32.exe "-lordoftheapp" "-skipall" start.dat</div><div>In the "start.dat" command file, use following code to check for the parameters:</div><div><pre>CLS CLEAR VAR vCount, vParamStr0, vParamStr1, vParamStr2 GETPROPERTY Application StartupParamCount vCount GETPROPERTY Application StartupParamStr0 vParamStr0 GETPROPERTY Application StartupParamStr1 vParamStr1 GETPROPERTY Application StartupParamStr2 vParamStr2 SET VAR vMessage = ('EXE NAME : ' + .vParamStr0 + (CHAR(13)) ++ 'PARAM 1 : ' + .vParamStr1 + (CHAR(13)) ++ 'PARAM 2 : ' + .vParamStr2 + (CHAR(13))) PAUSE 2 USING .vMessage SHOW VAR RETURN</pre></div></div>
CompanyName	<div><div>VarName</div><div>Returns the company name that produced the file.</div></div>

Control	Property	Value
---------	----------	-------

Application

Application Properties

OriginalFilename	VarName	Returns the original name of the file, not including a path.
ProductName	VarName	Returns the name of the product with which the file is distributed.
ProductVersion	VarName	Returns the version of the product with which the file is distributed.
Comments	VarName	Returns additional comment information for the file.
IsInternetConnected	VarName	Checks if the computer is connected to the Internet. (Return Value: YES/NO) GETPROPERTY APPLICATION IsInternetConnected vResult
FLUSHMEM	TRUE	Releases allocated memory for the R:BASE application instance. When memory intensive modules, like the R:BASE BLOB Editor, allocate memory for the R:BASE instance, FLUSHMEM will free up unneeded physical memory.
KEYBOARDPRESENT	VarName	Will return a variable value to find out if a keyboard is present. Example: GETPROPERTY APPLICATION KEYBOARDPRESENT 'vKeyboardPresent' The resulting TEXT variable value will be TRUE or FALSE.

Application

Application Properties

NATIVE_FORMS

ON Specifies if forms are to be displayed as "native", which eliminates the use of themes (R:BASE and operating system) on R:BASE form properties. With the setting OFF (default), the feature is disabled.

Pros and Cons
The NATIVE_FORMS property is offered as an optimization option to eliminate the theme-based drawing, painting, refreshing, etc., and to improve performance. There is however a functionality trade-off. It is important to note that in native mode some items would be disabled, such as the drop-down menu on the form title bar, or the ability to have only the minimize and X buttons on the title bar. Users may be required to rethink a form's design and presentation when the NATIVE_FORMS property is set to ON.

Native Form Use
The NATIVE_FORMS property is a global value. When the PROPERTY is ON, "any" launched form will be displayed as native. It's up to the user to decide how to manipulate the property. To enable native forms on a per-form basis, the property should be set ON before a form is launched with the REFF, BROWSE, EDIT, and ENTER commands, and then OFF within the form's "On After Start" EEP.

If a majority of the forms are to be native, then the property can be set to ON within the application on startup. For example, if there are hundreds of forms that should be native and just a dozen or so to be theme-based, then NATIVE_FORMS can be set to ON within the startup process, and then for each of the forms to be theme-based, the property can be turned OFF before a form is launched and set ON again within the "On After Start" EEP. Thus, setting the property to limit the effect to the forms be launched.

OFF Specifies if forms are to be displayed as "native", which eliminates the use of themes (R:BASE and operating system) on R:BASE form properties. With the setting OFF (default), the feature is disabled.

Pros and Cons
The NATIVE_FORMS property is offered as an optimization option to eliminate the theme-based drawing, painting, refreshing, etc., and to improve performance. The setting allows R:BASE to check if an MDI form alias already exists and stops form processing, if the provided alias already exists. The default value is OFF.</p>	

Control	Property	Value
---------	----------	-------

Application

Application Properties

MONITOR_COUNT

VarName

Sets the variable to the number of monitors.

GETPROPERTY APPLICATION MONITOR_COUNT 'vMonitorCount'

MONITOR_PROPERTY[X]

VarName

Gets the screen size properties of a monitor. The value for X is a zero based index.

Example:

GETPROPERTY APPLICATION MONITOR_PROPERTY[0] vMonitor
SHOW VAR vMonitor
0,Y,0,0,1920,1080,0,0,1920,1040

SHOWSLAVETABLES

TRUE

Specifies to display slave tables for forms, reports, and labels.

The environment setting should be executed before the first CONNECT command, ideally within the RBASE.DAT as it is processed before the Database Explorer is displayed. Once the setting is enforced, the value will be saved for future sessions.

FALSE

Specifies to hide slave tables for forms, reports, and labels.

The environment setting should be executed before the first CONNECT command, ideally within the RBASE.DAT as it is processed before the Database Explorer is displayed. Once the setting is enforced, the value will be saved for future sessions.

	HourGlass	<div>Specifies the mouse cursor shape as busy status character (hour glass, spinning circle, etc.).</div> <div>Example:</div> <div>PROPERTY ControlCompID CURSOR 'HourGlass'</div> <div>RETURN</div>
	HSplit	<div>Specifies the mouse cursor shape as two vertical lines with arrows pointing up and down.</div> <div>Example:</div> <div>PROPERTY ControlCompID CURSOR 'HSplit'</div> <div>RETURN</div>
	I Beam	<div>Specifies the mouse cursor shape as an ibeam (text select status).</div> <div>Example:</div> <div>PROPERTY ControlCompID CURSOR 'IBeam'</div> <div>RETURN</div>
	MultiDrag	<div>Specifies the mouse cursor shape as an arrow with multiple documents.</div> <div>Example:</div> <div>PROPERTY ControlCompID CURSOR 'MultiDrag'</div> <div>RETURN</div>
	UpArrow	<div>Specifies the mouse cursor shape as an arrow pointing up (alternate select).</div> <div>Example:</div> <div>PROPERTY ControlCompID CURSOR 'UpArrow'</div> <div>RETURN</div>
	VSplit	<div>Specifies the mouse cursor shape as two horizontal lines with arrows pointing left and right.</div> <div>Example:</div> <div>PROPERTY ControlCompID CURSOR 'VSplit'</div> <div>RETURN</div>
	HandPoint	<div>Specifies the mouse cursor shape as a hand pointing (link select status).</div> <div>Example:</div> <div>PROPERTY ControlCompID CURSOR 'HandPoint'</div> <div>RETURN</div>

Application

Application Properties

CURSOR

- SQLWait

Specifies the mouse cursor shape as an hourglass with "SQL" text below.

Example:

PROPERTY ControlCompID CURSOR 'SQLWait'
RETURN
- Default

Specifies the mouse cursor shape to display as the operating system default.

Example:

PROPERTY ControlCompID CURSOR 'Default'
RETURN
- Drag

Specifies the mouse cursor shape as an arrow with a document.

Example:

PROPERTY ControlCompID CURSOR 'Drag'
RETURN
- SizeWE

Specifies the mouse cursor shape as arrows pointing left and right (horizontal resize).

Example:

PROPERTY ControlCompID CURSOR 'SizeWE'
RETURN

TRACE_LAST_EXEC_EEP

- OFF

Specifies whether to activate EEP name monitoring. When ON, R:BASE sets the RBTI_LAST_EXEC_EEP variable value to the last EEP code that was "executed", meaning only the EEPs with code. The EEP Name is stored as "<CompID>|<EEPName>". If a Component ID is not defined, the 'Caption' property is used in place of the Component ID (if the 'Caption' property exists). The EEP tracking can add overhead to R:BASE, so it should be tuned OFF when not needed.

A startup file may have the following:

PROPERTY APPLICATION TRACE_LAST_EXEC_EEP ON
PROPERTY APPLICATION LOG_EXEC_EEP ON
- ON

Specifies whether to activate EEP name monitoring. When ON, R:BASE sets the RBTI_LAST_EXEC_EEP variable value to the last EEP code that was "executed", meaning only the EEPs with code. The EEP Name is stored as "<CompID>|<EEPName>". If a Component ID is not defined, the 'Caption' property is used in place of the Component ID (if the 'Caption' property exists). The EEP tracking can add overhead to R:BASE, so it should be tuned OFF when not needed.

A startup file may have the following:

PROPERTY APPLICATION TRACE_LAST_EXEC_EEP ON
PROPERTY APPLICATION LOG_EXEC_EEP ON

Application

Application Properties

TRACE_ALL_EEP	<div>OFF</div> <div><p>Specifies to set the RBTI_LAST_EXEC_EEP variable value to the last EEP that was "triggered", meaning all EEPs, containing code or not. If TRACE_ALL_EEP is OFF, the RBTI_LAST_EXEC_EEP variable value will have the last event "with code" that was "executed". If TRACE_ALL_EEP is ON, the RBTI_LAST_EXEC_EEP variable value will have the last event that was triggered (with or without code). For example, a button's "On Click" EEP will be triggered if you click it. If you have code assigned to it then it will be executed.</p><p>In most cases, users would have TRACE_ALL_EEP set to OFF to only be concerned with events where code is assigned. TRACE_ALL_EEP set to ON is helpful if you want to know more of the internal event sequence.</p><p>A startup file may have the following:</p><pre>PROPERTY APPLICATION TRACE_LAST_EXEC_EEP ON PROPERTY APPLICATION TRACE_ALL_EEP ON PROPERTY APPLICATION LOG_EXEC_EEP ON</pre></div> <div><div>ON</div><div><p>Specifies to set the RBTI_LAST_EXEC_EEP variable value to the last EEP that was "triggered", meaning all EEPs, containing code or not. FEEDBACK_POSITION_TOP	<div><div>RESET</div><div><p>Specifies to reset the FEEDBACK message box TOP coordinate, to display the results in the center of the screen.</p></div></div> <div><div>n</div><div><p>Specifies the TOP coordinate to display the FEEDBACK message box.</p></div></div>

Application

Application Properties

FEEDBACK_POSITION_LEFT	RESET	Specifies to reset the FEEDBACK message box LEFT coordinate, to display the results in the center of the screen.
	n	Specifies the LEFT coordinate to display the FEEDBACK message box.
HINT_COLOR	value	Specifies the hint background color.
HINT_SHORT_PAUSE	nnn	Specifies the time period to wait before bringing up a hint if another hint has already been shown.
HINT_HIDE_PAUSE	nnn	Specifies the time interval to wait before hiding the hint if the mouse has not moved from the control or menu item.
OUTPUT_PDF_USE_PRINTER_DEF_PAPER	ON	Specifies to use default printer's paper size in the "OUTPUT FileName.PDF PDF" command use.
	OFF	Specifies to use default printer's paper size in the "OUTPUT FileName.PDF PDF" command use.
REMOTESession	VarName	Determines if the R:BASE session is launched in a remote desktop environment. The defined variable value is TRUE if R:BASE is running in a remote session. Otherwise, the variable value is FALSE.
CENTER_EDITORS_IN_MAIN_FORM	OFF	Specifies to center property editors in the R:BASE main form. The setting is helpful in multi-monitor environments to place the editors dialog with the appropriate R:BASE session. When OFF, the property editor's last position is persisted.
	ON	Specifies to center property editors in the R:BASE main form. The setting is helpful in multi-monitor environments to place the editors dialog with the appropriate R:BASE session. When OFF, the property editor's last position is persisted.
TITLEBARCOLOR	VarName	<div>Captures the color of the Windows title bar, returning the integer color value. With the TitleBarColor and ForegroundColor properties, the captured values may be used upon a panel, or other control, to mimic the current layout, more so for Windows 10 operating systems.</div> <div>Example:</div> <div>GETPROPERTY APPLICATION TitleBarColor vTitleBarColor SET VAR vCmd TEXT = + ('GETPROPERTY APPLICATION ForegroundColor[' + .vTitleBarColor + ' vTitleTextColor') &vCmd PROPERTY HeaderPanel COLOR .vTitleBarColor PROPERTY HeaderPanel FONT->COLOR .vTitleTextColor</div>

Form Controls and Properties		Application
Control	Property	Value
<div>Application</div> <div>Application Properties</div>		
FOREGROUND_COLOR[IntColor]	<div>VarName</div> <p>Determines the readable foreground color for the given background color. With the TitleBarColor and ForegroundColor properties, the captured values may be used upon a panel, or other control, to mimic the current layout, more so for Windows 10 operating systems.</p> <p>Example:</p> <pre> GETPROPERTY APPLICATION TitleBarColor vTitleBarColor SET VAR vCmd TEXT = + ('GETPROPERTY APPLICATION ForegroundColor[' + .vTitleBarColor + '] vTitleTextColor') &vCmd PROPERTY HeaderPanel COLOR .vTitleBarColor PROPERTY HeaderPanel FONT->COLOR .vTitleTextColor </pre>	
MOUSE_FROM_SCREEN[X]	<div>VarName</div> <p>Captures the mouse position by the X coordinate for the screen.</p> <p>Example:</p> <pre> GETPROPERTY APPLICATION 'MOUSE_FROM_SCREEN[X]' 'vScreenX' GETPROPERTY APPLICATION 'MOUSE_FROM_SCREEN[Y]' 'vScreenY' </pre>	
MOUSE_FROM_SCREEN[Y]	<div>VarName</div> <p>Captures the mouse position by the Y coordinate for the screen.</p> <p>Example:</p> <pre> GETPROPERTY APPLICATION 'MOUSE_FROM_SCREEN[X]' 'vScreenX' GETPROPERTY APPLICATION 'MOUSE_FROM_SCREEN[Y]' 'vScreenY' </pre>	
MOUSE_FROM_WINDOW[X]	<div>VarName</div> <p>Captures the mouse position by the X coordinate for the current window.</p> <p>Example:</p> <pre> GETPROPERTY APPLICATION 'MOUSE_FROM_WINDOW[X]' 'vFormX' GETPROPERTY APPLICATION 'MOUSE_FROM_WINDOW[Y]' 'vFormY' </pre>	
MOUSE_FROM_WINDOW[Y]	<div>VarName</div> <p>Captures the mouse position by the Y coordinate for the current window.</p> <p>Example:</p> <pre> GETPROPERTY APPLICATION 'MOUSE_FROM_WINDOW[X]' 'vFormX' GETPROPERTY APPLICATION 'MOUSE_FROM_WINDOW[Y]' 'vFormY' </pre>	
ISRWEBREPORTS	<div>VarName</div> <p>Will return a variable value to find out if the running application is using the full version of R:BASE, or R:WEB Reports.</p> <p>Example:</p> <pre> GETPROPERTY APPLICATION ISRWEBREPORTS vIsRWebReports </pre> <p>The resulting TEXT variable value will be YES or NO.</p> <p>The parameter is supported for the GETPROPERTY command only.</p>

Application Properties		
CAPTURE_RBTI_FORM_VARS		
	ON	<p>Specifies if "RBTI Variable" (RBTI_*) processing is enabled in forms. If perhaps the variables are seldom used in an application, the processing may be turned off, as the variables are assigned in almost everything performed within a form.</p> <p>PROPERTY APPLICATION CAPTURE_RBTI_FORM_VARS ON</p> <p>The property is ON by default. To take advantage of this optimization, set it to OFF upon the application startup. Then, turn it ON only in forms that use the RBTI_* variable values. Make sure the property is turned OFF again when the form is closed.</p>
	OFF	<p>Specifies if "RBTI Variable" (RBTI_*) processing is enabled in forms. If perhaps the variables are seldom used in an application, the processing may be turned off, as the variables are assigned in almost everything performed within a form.</p> <p>PROPERTY APPLICATION CAPTURE_RBTI_FORM_VARS OFF</p> <p>The property is ON by default. To take advantage of this optimization, set it to OFF upon the application startup. Then, turn it ON only in forms that use the RBTI_* variable values. Make sure the property is turned OFF again when the form is closed.</p>
FEEDBACK_POSITION_RIGHT		
	n	Specifies the RIGHT coordinate to display the FEEDBACK message box.
	RESET	Specifies to reset the FEEDBACK message box RIGHT coordinate, to display the results in the center of the screen.
FEEDBACK_POSITION_BOTTOM		
	n	Specifies the BOTTOM coordinate to display the FEEDBACK message box.
	RESET	Specifies to reset the FEEDBACK message box BOTTOM coordinate, to display the results in the center of the screen.
FEEDBACK_POSITION_VERTICAL_CENTER		
		Specifies the FEEDBACK message box to be located at the vertical center of the display. The parameter helps to center the message box as needed, and eliminates the need for the application to make calculations based on the series of values returned by GETPROPERTY APPLICATION MONITOR_PROPERTY.
	RESET	Specifies to reset the FEEDBACK message box FEEDBACK_POSITION_VERTICAL_CENTER coordinate.
FEEDBACK_POSITION_HORIZONTAL_CENTER		
		Specifies the FEEDBACK message box to be located at the horizontal center of the display. The parameter helps to center the message box as needed, and eliminates the need for the application to make calculations based on the series of values returned by GETPROPERTY APPLICATION MONITOR_PROPERTY.
	RESET	Specifies to reset the FEEDBACK message box FEEDBACK_POSITION_HORIZONTAL_CENTER coordinate.

Form Controls and Properties			Application
Control	Property	Value	
			<div>Application</div> <div>Application Properties</div>
DELAYED_FOCUS_SWITCH	ON	<p>Specifies to treat SET_FOCUS, SET_ACTIVE_CONTROL, and SKIP commands to behave like DELAYED_SET_ACTIVE_CONTROL.</p> <p>When using SET_FOCUS to change the input focus to a control, it can have negative effects in some scenarios. SET_FOCUS steals the focus on a global level. That means, if a control in a non active form gets a SET_FOCUS, the non active form becomes the active form and the control is given the focus. This behavior does not blend well with popup forms (Pop-up Menu, CHOOSE, etc.) that are shown during focus transition.</p> <p>As such, SET_ACTIVE_CONTROL and DELAYED_SET_ACTIVE_CONTROL have been introduced to gain focus in a more "respectful" way.</p> <pre>PROPERTY ComponentID SET_ACTIVE_CONTROL TRUE</pre> <pre>PROPERTY ComponentID DELAYED_SET_ACTIVE_CONTROL TRUE</pre> <p>If SET_ACTIVE_CONTROL is used, the control will have focus if the parent form is the active form (works like SET_FOCUS). However, if the parent form is not the active form, the control will get the focus when the parent form becomes the active form. The "parent form recognition" is the difference maker. The PROPERTY command use does not get in the way of other forms.</p> <p>With DELAYED_SET_ACTIVE_CONTROL, the focus switch implemented uses PostMessage(), a safer cross-origin communication between Windows objects, and allows the focus cycle to be completed before a new focus switch cycle is started. The focus switch is basically "delayed."</p> <p>Below explains each focus method:</p> <ul style="list-style-type: none"> . SET_FOCUS - moves focus to the specified control. If parent form is not the active form, it will become the active form as well. . SKIP - works like SET_FOCUS but uses the TabOrder to determine which control to focus to. . SET_ACTIVE_CONTROL - moves the focus to the specified control. If parent form is not the active control, the focus switch will happen when the parent form becomes the active form. . DELAYED_SET_FOCUS - delayed SET_FOCUS . DELAYED_SET_ACTIVE_CONTROL - delayed SET_ACTIVE_CONTROL <p>Because it can be cumbersome to change SET_FOCUS into SET_ACTIVE_CONTROL or DELAYED_SET_ACTIVE_CONTROL in many places, a newly added APPLICATION property was implemented to treat SET_FOCUS commands as the different "focus" counterpart.</p> <pre>PROPERTY APPLICATION DELAYED_FOCUS_SWITCH ON</pre>	
	OFF	<p>Specifies to treat SET_FOCUS commands as SET_ACTIVE_CONTROL.</p> <p>SET_FOCUS while useful, has negative effects in some scenarios. SET_FOCUS steals the focus on a global level. That means, if a control in a non active form gets a SET_FOCUS, the non active form becomes the active form and the control is given the focus. This behavior does not blend well with the Trace Debugger because it also uses SetFocus internally when it is shown. The R:BASE form and Trace Debugger form are now battling for the user's attention and things can become complex. As such, SET_ACTIVE_CONTROL has been introduced.</p> <pre>PROPERTY ComponentID SET_ACTIVE_CONTROL TRUE</pre> <p>This new property was added to gain focus in a more "respectful" way. If SET_ACTIVE_CONTROL is used, the control will have focus if the parent form is the active form (works like SET_FOCUS). However, if the parent form is not the active</p>

CTRL_POPUP_POSITION	<div>BOTTOM_RIGHT</div> <div>Specifies the location of the popup menu is below the control and right aligned.</div> <div>TOP_RIGHT</div> <div>Specifies the location of the popup menu is above the control and right aligned.</div> <div>BOTTOM_LEFT</div> <div>Specifies the location of the popup menu is below the control and left aligned.</div> <div>SCREEN_CENTER</div> <div>Specifies the location of the popup menu at the center of the screen, which is the default location.</div> <div>TOP_LEFT</div> <div>Specifies the location of the popup menu is above the control and left aligned.</div> <div>MOUSE_POSITION</div> <div>Specifies the location of the popup menu is anchored on the mouse cursor position when the control was double clicked.</div>
HINT_MAX_WIDTH	<div>nnn</div> <div>Specifies the maximum width for the hint message.</div>

Control	Property	Value
---------	----------	-------

Application

Application Properties

HINT_TYPE		<div>MODERN</div> Specifies the hint message type.
		<div>REGULAR</div> Specifies the hint message type.
		<div>BALLOON</div> Specifies the hint message type.
HINT_MODERN_ARROW_COLOR		
	Value	Specifies the color of the modern hint's arrow in the thick border.
HINT_MODERN_BACK_COLOR		
	Value	Specifies the color of the modern hint's text background.
PLATFORM		
	VarName	Returns the operating system name.
NETWORKCONNECTIONTYPE		
	VarName	Returns the network connection type. Return values are: Wi-Fi, Bluetooth, Ethernet, Unknown
		GETPROPERTY APPLICATION NetworkConnectionType vContype
NETWORKCONNECTIONTYPEEX		
	VarName	Returns the network connection type and name of the adapter. Return values for the connection type are: Wi-Fi, Bluetooth, Ethernet, Unknown
		GETPROPERTY APPLICATION NetworkConnectionTypeEx vContype
AUTO_ROTATE_IMAGE		
	OFF	Specifies to auto-rotate images (from file) using the EXIF information. DB Image and Variable Image controls in reports will check the AUTO_ROTATE_IMAGE value. The default value is OFF.
	ON	Specifies to auto-rotate images (from file) using the EXIF information. DB Image and Variable Image controls in reports will check the AUTO_ROTATE_IMAGE value. The default value is OFF.
ADD_TO_FAV_CMD		
	Value	Adds a command string to the R> Prompt Favorite Commands.
ADD_TO_RPROMPT_HIST		
	Value	Adds a command string to the R> Prompt Command History.
SHOWVIEWTABLES		
	FALSE	Toggles the display of tables/views for the Views area of the Database Explorer.
	TRUE	Toggles the display of tables/views for the Views area of the Database Explorer.
HYPHEN_AS_WORD_SEPARATOR		
	OFF	Specifies to alter the Title casing behavior of hyphenated strings for form Edit/Memo controls, where the first letter in the second value of a hyphenated string is made upper case. The default value is OFF.
	ON	Specifies to alter the Title casing behavior of hyphenated strings for form Edit/Memo controls, where the first letter in the second value of a hyphenated string is made upper case. The default value is OFF.

Application Designer

Application Designer

RBA_FORM

CAPTION

value Use this command to dynamically change the caption for RBA (.RBA) application. Recommended as embedded EEP in "On Start Action" property of Application Designer.

Application Designer | Properties | On Start Action

Example:

```
CLEAR VAR vFormCaption
SET VAR vFormCaption = ('You are logged in as: '&(CVAL('NETUSER'))')
PROPERTY RBA_FORM CAPTION .vFormCaption
RETURN
```

This will display the variable message as form caption for your application. It is very useful to dynamically change the caption as static or dynamic variable depending on your environment.

Note: This property command will overwrite the Caption defined in application designer.

Control	Property	Value
---------	----------	-------

Application Designer

RBA_FORM

SCALEBY

value Use this property to scale an application file, and all related controls, to a specified screen pixel width.

```
PROPERTY RBA_FORM SCALEBY nnnn
```

The SCALEBY property modifies the Height and Width properties of the application and all controls placed on it, but it does not change the Top and Left properties; therefore, the size of the controls changes, but not the coordinates of the top-left corners of the controls. Thus, it preserves the position of all controls on the application.

If you have developed an application that is 800x600 for the majority of users having a monitor with 800x600 screen resolution to fit the form on the entire available screen, but a few users of your application have a higher resolution (1024x768) and if you wish your 800x600 application to fill the entire screen of a monitor with a resolution of 1024x768, you'll need to use the RBA_FORM SCALEBY property as follows:

Example:

```
PROPERTY RBA_FORM SCALEBY '800'  
RETURN
```

This will scale the original application designed as 800x600 to fill the entire screen even if the screen resolution is higher than 800x600, such as, 1400x1050, 1280x800 or 1024x768.

Notes:

- . The 'value' should be the same as the original application width in order to scale proportionally on the monitors with higher resolution.
- . Use the SCALEBY property within an application file's "On After Start" Action.
- . To take advantage of this feature, make sure to use true type fonts.

FILL_SCREEN With the required steps for scaling application files based upon the screen dimensions, themes, borders, etc., an enhanced "fill the screen" scaling of forms has been implemented.

To fill the screen when scaling application files, use the "FILL_SCREEN" parameter.

```
PROPERTY RBA_FORM SCALEBY 'FILL_SCREEN'
```

Notes:

- . Use the SCALEBY property within a application file's "On After Start" Action.
- . To take advantage of this feature, make sure to use true type fonts.

Application Designer

RBA_FORM

THEMENAME

value Use this property to dynamically change the theme.

Syntax:

PROPERTY RBA_FORM THEMENAME Value

Where Value includes the following options:

- . Deep Cyan
- . Deep Green
- . Deep Orange
- . Funny Theme
- . Gnome
- . Green Glass
- . Longhorn
- . Mac OS
- . Matrix
- . Media
- . One Blue
- . One Clear Blue
- . One Cyan
- . One Green
- . One Orange
- . Orange Glass
- . R:BASE Rocks!
- . Razzmatazz
- . Real One
- . Sports Black
- . Sports Blue
- . Sports Cyan
- . Sports Green
- . Sports Orange
- . Win Native
- . XP Egypt
- . XP Green
- . XP Grey Scale
- . XP Orange
- . XP Silver

Example 01:

PROPERTY RBA_FORM THEMENAME R:BASE Rocks!
RETURN

Example 02:

PROPERTY RBA_FORM THEMENAME Razzmatazz
RETURN

Example 03:

PROPERTY RBA_FORM THEMENAME Longhorn
RETURN

Control	Property	Value
---------	----------	-------

Application Designer

RBA_FORM

|ActionComplD CAPTION

value

Specifies the caption that appears on the application action.

To underline a character in a Caption that appears on the button, include an ampersand (&) before the character. This type of character is called an accelerator character. The user can then select the button by pressing [Alt] while typing the underlined character. To display an ampersand character in the caption, use two ampersands (&&).

|ActionComplD ENABLED

TRUE

Controls whether the application action responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the application action to the user. To disable an application action, set Enabled to false. Disabled application actions appear dimmed. If Enabled is false, the action ignores mouse, keyboard, and timer events.

To re-enable an application action, set Enabled to true. The application action is no longer dimmed, and the user can use the action.

FALSE

Controls whether the application action responds to mouse, keyboard, and timer events.

Use Enabled to change the availability of the application action to the user. To disable an application action, set Enabled to false. Disabled application actions appear dimmed. If Enabled is false, the action ignores mouse, keyboard, and timer events.

To re-enable an application action, set Enabled to true. The application action is no longer dimmed, and the user can use the action.

|ActionComplD HINT

value

Specifies the hint that appears with the application action.

CLOSE

TRUE

Allows the ability to close the .RBA application file.

STATUSHINTS

TRUE

Specifies if hints are displayed in the application status bar.

FALSE

Specifies if hints are displayed in the application status bar.

TOP

nnn

Specifies the horizontal coordinate of the top edge of the application window.

LEFT

nnn

Specifies the horizontal coordinate of the left edge of the application window.

Report

Report

Report Properties

TOTALPAGECOUNT

varname Supported parameter for GETPROPERTY command only.

Will return the total number of pages in report.

Example:

Use the following custom EEP as After Generate EEP for Report Footer:

```
SET VAR vPageCount TEXT = NULL
GETPROPERTY REPORT TotalPageCount 'vPageCount'
PAUSE 2 USING .vPageCount
RETURN
```

REPORT_NAME

varname Supported parameter for GETPROPERTY command only.

Will return the report name.

Example:

```
GETPROPERTY REPORT ReportName 'vReportName'
RETURN
```

REPORT_TABLE_COUNT

varname Supported parameter for GETPROPERTY command only.

Will retrieve the number of tables associated with the report.

Example:

```
GETPROPERTY REPORT 'Report_Table_Count' vReportTblCount
RETURN
```

REPORT_TABLE_NAME[0]

varname Supported parameter for GETPROPERTY command only.

Will retrieve the Master table name associated with the report.

Example:

```
GETPROPERTY REPORT 'Report_Table_Name[0]' vReportMasterTbl
RETURN
```

Control	Property	Value

CANCEL_IN_PROGRESS_DIALOG	<div>ON</div> <div>Specifies whether to disable the Cancel button in the Print progress dialog. The default is ON. When the parameter is OFF, the progress dialog is displayed, but the Cancel button is disabled.</div> <div>OFF</div> <div>Specifies whether to disable the Cancel button in the Print progress dialog. The default is ON. When the parameter is OFF, the progress dialog is displayed, but the Cancel button is disabled.</div>

Report

Report Properties

PDF_SERIF_FONT_REPLACEMENT

Value

Specifies a replacement font for all reports/labels using the MS San Serif device font, or any fonts in the Swiss font family, when printing to PDF output. Any TrueType font can be used for the substitute.

When printing to the PDF output, the MS Sans Serif device font is substituted with Helvetica (native PDF font), which is wider than MS Sans Serif, and may result in characters being truncated.

The substitution logic is true for all device fonts, which is indicated by a monitor icon in the font drop-down, within the Report Designer's Format toolbar. MS Sans Serif is in the Swiss font family which are recognized by variable stroke widths, which are proportional to the actual widths of the glyphs, and which do not have serifs.

Please issue the below command at the R:BASE startup to specify a replacement font:

```
PROPERTY REPORT PDF_SERIF_FONT_REPLACEMENT 'Arial'
```

To clear a substitution, use the following command to pass a space as the font name.

```
PROPERTY REPORT PDF_SERIF_FONT_REPLACEMENT ' '
```

OUTLINE_IN_PREVIEW

- OFF
- Specifies whether to have reports displayed in the Print Preview to include the "Report Outline" option.
- ON
- Specifies whether to have reports displayed in the Print Preview to include the "Report Outline" option.

Form Controls and Properties		Load Window
Control	Property	Value
<div> <div>Load Window</div>  </div>		
<div> <div>Load Window</div> <div>LOADWINDOW</div> </div>		
TITLE		
	value	Used to enter your own custom message for the progress dialog window. This PROPERTY command is supported for R:Compiler ONLY.
PROGRESS		
	nnn	Used to display the meter changes for the progress dialog window. This PROPERTY command is supported for R:Compiler ONLY.
CLOSE		
	TRUE	Specifies when to close the progress dialog window. This PROPERTY command is supported for R:Compiler ONLY.
CAPTION		
	value	Used to enter your own custom caption for the progress dialog window. This PROPERTY command is supported for R:Compiler ONLY.
SHOWINDICATOR		
	FALSE	Specifies if a moving GIF indicator is displayed on the load window.
	TRUE	Specifies if a moving GIF indicator is displayed on the load window.

Column

Column

Column Properties

[TableName->ColumnName] ISNULL

VarName Returns the value TRUE if the column is NULL, and FALSE if the column contains data.

Example:

```
GETPROPERTY TABLE_COLUMN[Contact->ContPhoto] ISNULL vValue
```

The parameter is only available with the GETPROPERTY command.

[TableName->ColumnName] IMAGECOUNT

VarName Returns the number of images within a multi-image file.

Example:

```
GETPROPERTY TABLE_COLUMN[Contact->ContPhoto] IMAGECOUNT vImgCount
```

The parameter is only available with the GETPROPERTY command.

[TableName->ColumnName] TEXTVALUE

VarName Captures/updates the value for a field.

Example to get the column value of a column:

```
GETPROPERTY TABLE_COLUMN[Customer->CustStatus] TEXTVALUE 'vStatus'
```

Example to update the column value of a column:

```
PROPERTY TABLE_COLUMN[Customer->CustStatus] TEXTVALUE .vStatus
```

[TableName->ColumnName] SETTONULL

Value Updates the value to NULL for a field.

Example to update the column value of a column:

```
PROPERTY TABLE_COLUMN[Customer->CustStatus] SETTONULL ' '
```

Control	Property	Value
---------	----------	-------

R:BASE BLOB Editor

R:BASE BLOB Editor

BLOB EDITOR Properties

CAPTION

Value Specifies the window caption for the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR CAPTION 'Value'
```

ICON

Value Specifies the window icon for the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR ICON 'IconFileName.ico'
```

DEFAULT_RTF_FONT_NAME

Value Specifies the default font for the RTF tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_NAME Arial
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_SIZE 10
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_COLOR Maroon
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_BOLD ON
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_ITALIC OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_UNDERLINE OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_STRIKEOUT OFF
```

DEFAULT_RTF_FONT_SIZE

Value Specifies the default font size for the RTF tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_NAME Arial
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_SIZE 10
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_COLOR Maroon
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_BOLD ON
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_ITALIC OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_UNDERLINE OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_STRIKEOUT OFF
```

Control	Property	Value
---------	----------	-------

R:BASE BLOB Editor

BLOB EDITOR Properties

DEFAULT_RTF_FONT_COLOR

Value Specifies the default font color for the RTF tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_NAME Arial
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_SIZE 10
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_COLOR Maroon
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_BOLD ON
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_ITALIC OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_UNDERLINE OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_STRIKEOUT OFF
```

DEFAULT_RTF_FONT_NORMAL

Specifies to use a normal font for the RTF tab of the BLOB Editor, removing any bold, italic, underline, and strikeout style in place.

The parameter is equivalent to setting the below to OFF.

```
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_BOLD OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_ITALIC OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_UNDERLINE OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_STRIKEOUT OFF
```

The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_NORMAL ' '
```

Control	Property	Value
---------	----------	-------

R:BASE BLOB Editor

BLOB EDITOR Properties

DEFAULT_RTF_FONT_BOLD

ON Specifies the default font bold style for the RTF tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_NAME Arial
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_SIZE 10
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_COLOR Maroon
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_BOLD ON
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_ITALIC OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_UNDERLINE OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_STRIKEOUT OFF
```

OFF Specifies the default font bold style for the RTF tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_NAME Arial
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_SIZE 10
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_COLOR Maroon
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_BOLD ON
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_ITALIC OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_UNDERLINE OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_STRIKEOUT OFF
```

Control	Property	Value
---------	----------	-------

R:BASE BLOB Editor

BLOB EDITOR Properties

DEFAULT_RTF_FONT_ITALIC

ON Specifies the default font italic style for the RTF tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_NAME Arial
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_SIZE 10
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_COLOR Maroon
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_BOLD ON
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_ITALIC OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_UNDERLINE OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_STRIKEOUT OFF
```

OFF Specifies the default font italic style for the RTF tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_NAME Arial
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_SIZE 10
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_COLOR Maroon
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_BOLD ON
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_ITALIC OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_UNDERLINE OFF
PROPERTY BLOB_EDITOR DEFAULT_RTF_FONT_STRIKEOUT OFF
```

R:BASE BLOB Editor

BLOB EDITOR Properties

FORCE_READ_ONLY

ON Specifies if the BLOB Editor will be in read-only mode. When OFF, the status is dependent on the field's read-only status.

The property must be set before the BLOB Editor is shown. That means that in the form, it must be set in the initialization section, such as the "On Before Start" or "On After Start" EEPs. If the value will be dependent on certain row values in a table, the property can be changed in the tables "On Row Enter"/"On Row Exit" EEPs.

Based on the user, you may set the PROPERTY BLOB_EDITOR FORCE_READ_ONLY ON|OFF command in your application startup file as follows:

```
-- Example (Setting BLOB_EDITOR property conditionally)
IF (CVAL('NetUser')) IN (PhilM,MarkG,KenG) THEN
  PROPERTY BLOB_EDITOR FORCE_READ_ONLY 'OFF'
ELSE
  PROPERTY BLOB_EDITOR FORCE_READ_ONLY 'ON'
ENDIF
```

OFF Specifies if the BLOB Editor will be in read-only mode. When OFF, the status is dependent on the field's read-only status.

The property must be set before the BLOB Editor is shown. That means that in the form, it must be set in the initialization section, such as the "On Before Start" or "On After Start" EEPs. If the value will be dependent on certain row values in a table, the property can be changed in the tables "On Row Enter"/"On Row Exit" EEPs.

Based on the user, you may set the PROPERTY BLOB_EDITOR FORCE_READ_ONLY ON|OFF command in your application startup file as follows:

```
-- Example (Setting BLOB_EDITOR property conditionally)
IF (CVAL('NetUser')) IN (PhilM,MarkG,KenG) THEN
  PROPERTY BLOB_EDITOR FORCE_READ_ONLY 'OFF'
ELSE
  PROPERTY BLOB_EDITOR FORCE_READ_ONLY 'ON'
ENDIF
```

DEFAULT_TEXT_FONT_NAME

Value Specifies the default font for the Text tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_NAME 'Courier New'
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_SIZE 10
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_BOLD OFF
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_ITALIC OFF

PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_BOLD OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_ITALIC OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_UNDERLINE OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_STRIKEOUT OFF
```

OFF Specifies the default font italic style for the Text tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_NAME 'Courier New'  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_SIZE 10  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_BOLD OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_ITALIC OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_UNDERLINE OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_STRIKEOUT OFF
```

DEFAULT_TEXT_FONT_UNDERLINE

ON Specifies the default font underline style for the Text tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_NAME 'Courier New'  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_SIZE 10  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_BOLD OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_ITALIC OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_UNDERLINE OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_STRIKEOUT OFF
```

OFF Specifies the default font underline style for the Text tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_NAME 'Courier New'  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_SIZE 10  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_BOLD OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_ITALIC OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_UNDERLINE OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_STRIKEOUT OFF
```

Control	Property	Value

R:BASE BLOB Editor

BLOB EDITOR Properties

DEFAULT_TEXT_FONT_STRIKEOUT

ON Specifies the default font strikeout style for the Text tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_NAME 'Courier New'  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_SIZE 10  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_BOLD OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_ITALIC OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_UNDERLINE OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_STRIKEOUT OFF
```

OFF Specifies the default font strikeout style for the Text tab of the BLOB Editor. The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_NAME 'Courier New'  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_SIZE 10  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_BOLD OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_ITALIC OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_UNDERLINE OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_STRIKEOUT OFF
```

DEFAULT_TEXT_FONT_NORMAL

Specifies to use a normal font for the Text tab of the BLOB Editor, removing any bold, italic, underline, and strikeout style in place.

The parameter is equivalent to setting the below to OFF.

```
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_BOLD OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_ITALIC OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_UNDERLINE OFF  
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_STRIKEOUT OFF
```

The command updates the default settings, so values passed are "saved" once the BLOB Editor is closed.

The PROPERTY commands must be executed first, before launching the BLOB Editor.

Example:

```
PROPERTY BLOB_EDITOR DEFAULT_TEXT_FONT_NORMAL ' '
```

Themes

Themes

LOAD_THEME

'theme name'

theme file Loads an external theme for the current session.

Example:

```
PROPERTY LOAD_THEME 'NewLuna' LunaBlue.msstyles
```

Note: The ability to load external themes into R:BASE has been introduced in R:BASE eXtreme 9.0 (32/64), and thus is only supported in this version and future releases.

Control	Property	Value
---------	----------	-------

Themes

RELEASE_THEME

'theme name'

TRUE Releases an existing loaded theme.

Example:

```
PROPERTY RELEASE_THEME NewLuna TRUE
```

Note: The ability to load external themes into R:BASE has been introduced in R:BASE eXtreme 9.0 (32/64), and thus is only supported in this version and future releases.

Themes

CHANGE_THEME

'theme name'

theme file Loads a new a different theme file for a loaded theme name.

Example:

```
PROPERTY CHANGE_THEME NewLuna LunaXP.msstyles
```

After this command is issued, the theme NewLuna will be use the styles defined in the LunaXP.msstyles file. This command parameter is provided to alter the theme file, and to avoid changing the specified "theme name" is every location within the code.

Note: The ability to load external themes into R:BASE has been introduced in R:BASE eXtreme 9.0 (32/64), and thus is only supported in this version and future releases.

PROPERTY ROSK TEXT_COLOR_NORMAL BLACK
PROPERTY ROSK TEXT_COLOR_PRESSED BLACK
PROPERTY ROSK DRAWING_STYLE GRADIENT
PROPERTY ROSK GRADIENT_START_COLOR BLUE
PROPERTY ROSK GRADIENT_END_COLOR WHITE
```

TRUE Specifies whether to show/hide the on-screen keyboard.

Example:

```
PROPERTY ROSK SHOW TRUE
PROPERTY ROSK BK_START_COLOR_NORMAL WHITE
PROPERTY ROSK BK_END_COLOR_NORMAL RED
PROPERTY ROSK BK_START_COLOR_PRESSED white
PROPERTY ROSK BK_END_COLOR_PRESSED GRAY
PROPERTY ROSK OUTER_EDGE_COLOR_NORMAL BLACK
PROPERTY ROSK OUTER_EDGE_COLOR_PRESSED RED
PROPERTY ROSK INNER_EDGE_COLOR_NORMAL WHITE
PROPERTY ROSK INNER_EDGE_COLOR_PRESSED RED
PROPERTY ROSK TEXT_COLOR_NORMAL BLACK
PROPERTY ROSK TEXT_COLOR_PRESSED BLACK
PROPERTY ROSK DRAWING_STYLE GRADIENT
PROPERTY ROSK GRADIENT_START_COLOR BLUE
PROPERTY ROSK GRADIENT_END_COLOR WHITE
```

OUTER_EDGE_COLOR_NORMAL

Value Specifies the outer edge color of the keyboard buttons.

OUTER_EDGE_COLOR_PRESSED

Value Specifies the outer edge color of the keyboard buttons, when pressed.

OUTER_EDGE_COLOR_DISABLED

Value Specifies the outer edge color of the keyboard buttons, when disabled.

INNER_EDGE_COLOR_NORMAL

Value Specifies the inner edge color of the keyboard buttons.
